Assessing the Knowledge level of Anganwadi Workers on Growth Monitoring and Counselling services under Integrated Child Development Scheme (ICDS) in 3 Blocks at Jamnagar district of Gujarat

By

Dr .Harish Vaish

Under the Guidance of

Mrs. Divya Agarwal **Post Graduate Diploma in Health Management**

2013-15

International institute of health management and research New Delhi

ICDS Society

District ICDS Society Management Unit Jamnagar District Panchayat, Jamnagar, Gujarat

The Certificate is awarded to

Dr. Harish Vaish

In recognition of having completed his Internship in
Integrated Child Development Services
And has successfully completed his project on

Assessing the Knowledge level of Anganwadi Workers on Growth Monitoring and Counseling services under Integrated Child Development Scheme (ICDS) of Jamnagar District of Gujarat.

(March, 2015- May, 2015)

He came across a committed, sincere and diligent person who has a

Strong drive and zeal for learning.

We wish him all the best for future endeavors.

J.B. Bathime Officer Program Officer ICDS Society District Panchayat Jamnagar

To Whomsoever It May Concern

This is to certify that Dr. Harish Vaish, student of Post Graduate Diploma in Health Management (PGDHM) from international Institute of Health Management Research, New Delhi has undergone Internship training at Integrated Child Development Services Department, Jamnagar, Gujarat, from March, 2015 to May, 2015.

The candidate has successfully carried out the study designated to him during internship training and his approach to the study has been sincere, scientific and analytical. The Internship is in fulfilment of the course requirements.

I wish him all success in all his future endeavours.

Dean,

Academics and Student Affairs

IIHMR, New Delhi

Mrs. DivyaAggarwal

IIHMR, New Delhi

Certificate of Approval

The following dissertation titled "Assessing the knowledge level of Anganwadi Workers on Growth Monitoring and Counseling services" at "Integrated Child Development Scheme (ICDS), Gujarat is hereby approved as a certified study in management carried out and presented in a manner satisfactorily to warrant its acceptance as a prerequisite for the award of Post Graduate Diploma in Health and Hospital Management for which it has been submitted. It is understood that by this approval the undersigned do not necessarily endorse or approve any statement made, opinion expressed or conclusion drawn therein but approve the dissertation only for the purpose it is submitted.

Dissertation Examination Committee for evaluation of dissertation.

CERTIFICATE BY SCHOLAR

This is to certify that the dissertation titled Assersing the knowledge of Auganwadi workers on Growth Moultoning of Counselling services and submitted by (Name) Harish Voish Enrollment No. 19 (13/025 under the supervision of Mrs.: Dinga Agarwal for award of Postgraduate Diploma in Hospital and Health Management of the Institute carried out during the period from March 2015 to May 2015 embodies my original work and has not formed the basis for the award of any
degree, diploma associate ship, fellowship, titles in this or any other Institute or
other similar institution of higher learning.

Signature

Dissertation Writing

Certificate from Dissertation Advisory Committee

This is to certify that Dr. Harish Vaish, a graduate student of the Post-Graduate Diploma in Health and Hospital Management has worked under our guidance and supervision. He is submitting this dissertation titled "Assessing the Knowledge level of Anganwadi Workers on Growth Monitoring and Counseling services under Integrated Child Development Scheme (ICDS)" at "ICDS Society, Jamnagar, Gujarat in partial fulfillment of the requirements for the award of the Post-Graduate Diploma in Health and Hospital Management.

This dissertation has the requisite standard and to the best of our knowledge no part of it has been reproduced from any other dissertation, monograph, report or book.

Acknowledgement

Every successful story is a result of an effective team work, a team which comprises of a good coach and good team players. Likewise this thesis report is no exception. This has been a meticulous effort of a group of people along with me. I want to take this opportunity to thank each and every one who has been a part of this report.

To start with, I wish to thank my mentor and guide Mrs. Divya Aggarwal. She has been a constant source of encouragement with her valuable inputs about the dissertation. Her timely advice helped me realize what was required to conduct the research and collect the data and helped me complete it in an effective baby.

Secondly, I wish to thank Mrs. B. J. BABI, Program Officer- ICDS-Gujarat Government. She was instrumental in providing me this opportunity and helping me in getting the relevant information.

Also, I wish to take this opportunity to thank all the CDPOs, block coordinators working at the ground level along with Mrs. Shradhaben Shah (M.S), Suresh Rathore -Data Entry operator, ICDS- Jamnagar for helping me in compiling all the collected data in this report.

Preface

I started off my internship with a vision in my mind so as to be able to learn about the practical aspects of healthcare delivery system on Nutrition in a more detailed manner. Hereby, I take this opportunity to express my deep sense of gratitude to all those who have been instrumental in successful completion of my internship.

Any accomplishment requires blessings and efforts of numerous individuals and this work is no exception. I thank god Almighty for giving me this great opportunity to study and learn at this prestigious organization and help me to implement my theoretical knowledge into practical aspect.

This report is my master thesis for the conclusion of my Post Graduate Diploma Program in Hospital and Health Management at International Institute of Health Management Research, New Delhi. Moreover, it is also a conclusion of my internship at the Integrated Child Development Services, District Panchayat Jamnagar, Gujarat. I really appreciated many people who helped me at the project.

The report comprises of my original work on Assessing the Knowledge level of Anganwadi Workers on Growth Monitoring and Counselling services under Integrated Child Development Scheme (ICDS), Jamnagar District in Gujarat.

At last, I take immense pleasure to thank **Dr. L.P. Singh** (*Director-International Institute of Health Management Research*) and **Dr. Ashok Kumar Aggarwal** (*Dean, - International Institute of Health Management Research, New Delhi*) for placing me in such an esteemed organization (ICDS) to undertake my dissertation program. I would thank **Integrated Child Development Services** (**ICDS**), **Gujarat** to provide me with an opportunity to work with them, where I gained basic knowledge about working of health system and its functionaries.

Dr. Harish Vaish

DISSERTATION REPORT

Title of the study:

Assessing the knowledge level of Anganwadi Workers on Growth Monitoring and Counselling services under Integrated Child Development Scheme (ICDS) in Jamnagar district of Gujarat.

1.1 Abstract

Introduction: Growth monitoring consists of routine measurements to detect abnormal growth, combined with some action when this is detected. It aims to improve nutrition, reduce the risk of death or inadequate nutrition, help educate carers, and lead to early referral for conditions manifest by growth disorders. As Anganwadi Worker invests time in this activity, evidence for its benefits and harms was sort. Growth monitoring is one of the important function of AWWs, for which they should be sufficiently trained.

Background of Study: Growth monitoring has unique and as yet, incompletely applied potential for promotion of child health and nutrition and is an educative tool for the mother with regard to child feeding, appropriate response to illness and an understanding of the various factors which play a role in growth and development of the child by the AWWs.

Objectives of Study: The key objective of the study is to assess the current knowledge among Anganwadi Workers on growth monitoring of children enrolled in Anganwadi centre and counselling of beneficiaries

Methods: Descriptive Cross sectional study with convenient sampling was undertaken. Structured questionnaires were prepared addressing the objectives of the study and face-face interviews with AWWs were conducted.

Results: The study findings highlight that 100% of AWWs having the knowledge regarding the services provided under ICDS at AWC. In terms of knowledge regarding the weight gain by the children 67% of AWWs don't have proper idea and knowledge. 75% of AWW don't know how to use the electronic weighing machine to weight the children even after the training. Depending on response to question regarding the growth chart 87% of AWW know the importance of growth chart and the colour difference provided in growth chart and for white colour code stand for almost 91% of Anganwadi worker don't know how to use the MUAC tape.

Conclusion: All the AWWs Requirement of refresher training of all AWWs regarding the ideal weight gain of children at specific age. Proper re-orientation of Electronic Weighing Machine at SEJA level or Block level of AWW required. This can be done by providing training heretically, i.e., training of supervisors, block co-ordinators and CDPOs at block level who can further train the AWWs.

Key Words: Anaganwadi worker, Growth Monitoring, Electronic Weighing Machine, knowledge of AWW

1.2 Introduction of the study:

The Anganwadi worker (AWW) is the community based voluntary frontline worker of the ICDS programme. Selected from the community, she assumes a pivotal role due to her close and continuous contact with the beneficiaries. The output of the ICDS scheme is to a great extent dependant on the profile of the key functionary i.e. the AWW, her qualification, experience, skills, attitude, training etc.

An Anganwadi is the focal point for delivery of ICDS services to children and mothers. An Anganwadi normally covers a population of 1000 in both rural and urban areas and 700 in tribal areas. Services at Anganwadi centre (AWC) are delivered by an Anganwadi Worker (AWW), who is a part-time honorary worker. She is a woman of same locality, chosen by the people, having educational qualification of middle school or Matric or even primary level in some areas. She is assisted by a helper who is also a local woman and is paid a honorarium being functional unit of ICDS programme which involves different groups of beneficiaries, the AWW has to conduct various different types of job responsibilities.

An AWW's multifarious role requires managerial, education, communication and Counselling Skills. The various job responsibilities of an AWW are:

A. Planning for Implementation of ICDS Programme

- 1. Village Mapping
- 2. Rapport Building with Community
- 3. Conducting Community Survey and Enlisting Beneficiaries
- Children 0-6 years
- Children 'At Risk'
- Expectant and Nursing Mothers
- Adolescent Girls
- 4. Birth and Death Registration

B. Service Delivery

- 1. Preparation and Distribution of Supplementary Nutrition
- Children 6 months to 6 yrs.
- Expectant and Nursing Mothers
- Children and Mothers 'At Risk'
- 2. Growth Monitoring

Promote Breast feeding and counsel mothers on IYCF

- 3. Assisting Health Staff in Immunization and Health Check-up of Children and Mothers
- 4. Referral Services
- 5. Detection of Disability among Children
- 6. Providing Treatment for Minor Ailments and first aid.
- 7. Management of Neonatal and Childhood Illnesses
- 8. Health and Nutrition Education to Adolescent Girls, Women and Community
- 9. Organising Non-formal Preschool Education Activities
- 10. Depot holder of medicine kit contraceptives of ASHA and under ICDS
- 11. Counselling Woman on Birth Preparedness
- 12. Assist CDPOs/Supervisors in implementation of KSY and SABLA

C. Information, Education and Communication

- 1. Mobilise Community & Elicit Community Participation
- 2. Maintain Liaison with Panchayat, Primary Schools, Mahila Mandals and Health functionaries etc.

D. Management and Organisation

- 1. Management of Anganwadi Centre
- 2. Maintenance of Records, Registers and Visitor's Books
- 3. Preparation of monthly progress Reports

E. Awards:

Mata Yashoda Award for best performing Anganwadi worker and Anganwadi Helper at state and District Level.

1.3 Background of District Jamnagar

Jamnagar district is one of the 33 districts of Gujarat state in western India. The district is divided into 13 blocks and 61 sectors or seja. Jamnagar city is the administrative headquarters of this district.

1.3.1 Socio-Economic and Demographic Profile of the district

In 2011, Jamnagar had population of 2,160,119 of which male and female were 1,114,192 and 1,045,927 respectively. In 2001 census, Jamnagar had a population of 1,904,278 of which males were 981,320 and remaining 922,958 were females. There was change of 13.44 percent in the population compared to population as per 2001.

The initial provisional data released by census India 2011, shows that density of Jamnagar district for 2011 is 152 people per sq. km. In 2001, Jamnagar district density was at 135 people per sq. km. Jamnagar district administers 14,184 square kilometres of areas.

Average literacy rate of Jamnagar in 2011 were 73.65 compared to 66.48 of 2001. If things are looked out at gender wise, male and female literacy were 81.50 and 65.33 respectively. For 2001 census, same figures stood at 76.25 and 56.18 in Jamnagar District.

With regards to Sex Ratio in Jamnagar, it stood at 939 per 1000 male compared to 2001 census figure of 941. Child Sex Ratio as per census 2011 was 904 compared to 898 of census 2001. In 2011, Children under 0-6 formed 12.22 percent of Jamnagar District compared to 14.40 percent of 2001.

In ICDS, the district is divided into 13 blocks namely, Jodiya, Dhrol, Kalawad, jamjdhpur,. The area that has been chosen for the study is Sehera-1, Ghoghambha-1, Kalol-1, Kalol-2 block.

Table 1: Table below shows the distribution of Anganwadi Center at Block Level

S.No	Name of Block	AWC	S.No	Name of Block	AWC
1.	Jodiya	57	8.	Lalpur	157
2.	Dhrol	251	09.	Jamjodhpur	128

1.4 Literature review

A study titled Knowledge of Anganwadi Workers about Growth Monitoring in Delhi written by Sanjiv kumar Bhasin, Rakesh Kumar et al indicates that growth monitoring is an excellent tool for assessing the growth of a child and for detecting the earliest changes in growth and to initiate appropriate interventions. As such, it contributes to the promotion of child health and nutrition and is an educative tool for the mother with regard to child feeding, appropriate response to illness and an under- standing of the various factors which play a role in growth and development of the child. Growth monitoring is one of the important functions of AWWs, for which they should be sufficiently trained.

1.5 Rationale for the Study

Growth monitoring is an excellent tool for assessing the growth of a child and for detecting the earliest changes in growth and to initiate appropriate interventions. As such, it contributes to the promotion of child health and nutrition and is an educative tool for the mother with regard to child feeding, appropriate response to illness and an understanding of the various factors which play a role in growth and development of the child.

Growth monitoring has unique and as yet, incompletely applied potential for assisting health workers and parents to identify children with early problems in order to apply corrective measures.

Growth monitoring is one of the important functions of AWWs, for which they should be sufficiently trained. The present study was conducted to assess the knowledge of AWWs regarding growth monitoring and to find out the gaps in their knowledge. For better planning and implementation of growth monitoring at district level.

1.6 Research Question:

What is the current level of knowledge among the Anganwadi workers on Growth monitoring of children enrolled at Anganwadi centre and counselling of beneficiaries in Jamnagar district?

1.70bjectives:

The key objective of the study is to assess the current knowledge among Anganwadi Workers on growth monitoring of children enrolled in Anganwadi centre and counselling of beneficiaries.

1.8 Specific Objectives:

- i. To know the Socio-demographic characteristics of Anganwadi workers
- ii. To assess the services provided by Anganwadi workers and their knowledge regarding the services.
- **iii.** To know the problems faced by Anganwadi workers while delivering health services at Anganwadi Centre areas

1.9 Methodology:

- **1.9.1 Study Period**: March 2014- April 2014
- **1.9.2 Study Design:** Cross-sectional descriptive study
- **1.9.3 Study area:** The study has been conducted in Jodiya, Dhrol, Lalpur and Jamnagar rural blocks of Jamnagar district of Gujarat. 50 anganwadi centres were selected randomly from each block
- **1.9.4 Study Group:** The sample for the present study comprises of 50 Anganwadi workers belonging to four Blocks of Jamnagar District. I have selected 10 AWWs from Jodiya, 10 AWWs from Dhrol and 15 AWWs from Jamnagar rural and 15 AWWs from Lalpur. The nature and purpose of the study was explained to Anganwadi worker. The study was carried out with AWW consent and co-operation. The line listing of all AWCs was made for each block and the AWCs were selected randomly by a random number table.
- **1.9.5 Tools Applied:** A face to face interview schedule was used as a tool for data collection with various questions framed on the knowledge among Anganwadi workers regarding the services of ICDS. Major content of the interview schedule was: socio-economic and demographic profiles of AWWs, Knowledge about various ICDS services especially growth monitoring under AWC done by AWW.
- **1.9.6 Data Collection:** Quantitative and Qualitative study design was followed to collect necessary information on Anganwadi workers awareness regarding growth monitoring of Children. Data were collected personally by making personal visits to Anganwadi centres. Data was collected both from primary and secondary sources. Primary data was collected from all the Anganwadi workers. The secondary data was collected from official records, journals and literature form social science discipline and Guidelines.
- **1.9.7 Data Analysis:** The data obtained was compiled and tabulated using the SPSS software along with Microsoft Excel wherever required. Univariate and Multivariate analysis is performed to address above objective.
- **1.9.8 Ethical Considerations** Informed consent was taken before starting the interview. If anyone disagreed to become part of the data collection process they were not forced by any means. Prior information was given before visiting any Anganwadi Centre. Confidentiality was ensured to all participants.

1.10 Finding and Analysis:

Table 2.Socio demographic characteristics of the Anganwadi Workers

Characteristics	Percentage of respondent (N=50)
Age of AWW	
18-29	4
30-39	32
40-49	50
50-59	16
Educational Qualification of AWW	
Upto 10 th Std	24
11-12 Std	36
Graduate or above	40
Years AWW working in same AWC	
Less than 3 years	10
3-5 years	18
5-10 years	30
More than 10 years	42
AWW attended any training in last one year	100

a) Knowledge of Anganwadi Worker regarding the services provided under ICDS at AWC.

The day to day functioning of the AWC is a critical indicator of the effectiveness of the ICDS Programme. The Services provided under one roof of AWC are Supplementary Nutrition to Children from 6 months to 6 years, Pre School Education to Children of age group 3 to 6 years, Health checkups of Children , Adolescent girls, Pregnant and Lactating women, Referral Services, and Nutrition and Health Education to Adolescent girls , Lactating and Pregnant women. An attempt has been made in study to assess the knowledge of AWW regarding the services provided at AWC. As shown in table no 2, it was observed that 100% of interviewed AWW know the exact services which they have to provide at AWC.

Table 3: Table below shows the knowledge of Anganwadi Workers regarding the services provided under ICDS at Anganwadi Centre (n=50)

Services		Yes
	Number	%
Supplementary Nutrition	50	100 %
Pre School Education	50	100 %
Health Check ups	50	100 %
Referral Services	50	100 %
Nutrition and Health Education	50	100%

b) Knowledge regarding the weight gain by children per month

In children, growth is most rapid at the younger age. While the child is in the mother's womb, it grows many times from a tiny egg to a baby weighing between 2.5 kg- 3 kg at birth. A healthy baby gains about 800grams each month during the first two months of life, about 600 grams from 3 months to 4 months, around 400grams from 5months to 6months, and thereafter healthy child gains around 200grams each month up to 3 years.

As figure 1 shows, Among the AWWs there is lack of Knowledge regarding the ideal weight gain of children. 67% of AWW dont know the exact weight gain even they take weight of child .33 % show the positive response . They got the knowledge through training and books provided to them or through FHW or MO visits at there AWC.

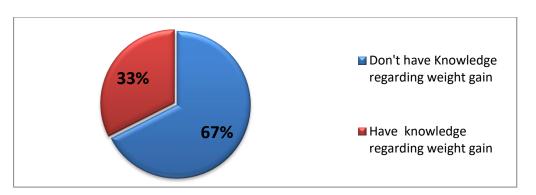

Figure 1: Figure 1 shows the pie charts showing the knowledge of the Anganwadi worker regarding the weight gain by children per month (n=50)

Table 4: Table showing the relationship between work experience of AWW and the knowledge about weight gain of children at specific age

	<u>-</u>	-	Knowledge about weight gain	
			yes	no
Work Experience	less than 3 Year	Count	0	5
		% within Work Experience	.0%	100.0%
	5 years	Count	2	7
		% within Work Experience	22.2%	77.7%
	5-10 Years	Count	7	8
		% within Work Experience	46.7%	53.3%
	More than 10 Years	Count	13	8
		% within Work Experience	62%	38%
Total		Count	22	28
		% within Work Experience	44%	56%

The above table shows that no AWW who had less than 3 years of experience had any knowledge about weight gain of children at specific age. Only 2 out of 9 AWW who had 5 years of experience had some knowledge about weight gain of children.

Most AWW with more than five years of experience (7 out of 15 AWW) reported having knowledge about weight gain of children. Thus only about 46.7 % AWW had some knowledge about weight gain of children at specific age.

c) Availability of Scales at AWC

We already discussed that children grow most rapidly from birth to 3 years, particularly in the first six months. In this age, they are also more vulnerable to diseases and inadequate nutrition which affect normal growth pattern. It is, therefore, essential to monitor growth of children in this age more frequently. The AWW should weigh all new born and children from birth-1 month weekly, one month-3 years every month and 3-5 years at every three months. However, children who are severely underweight, or who have not gained weight for 2 months, or who are "at risk" of under nutrition, should be weighed frequently preferably every month. The golden principle of New WHO Growth Standards i.e. weighing and plotting weight of children on the basis of completed weeks/months, it is advisable to conduct four weighing sessions in a month at the AWC so that all children are weighed every month. Those children who do not attend AWC should also be motivated to attend the weighing sessions, without fail.

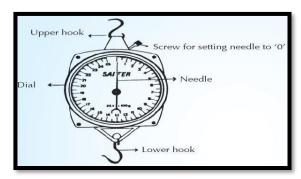

Figure 2: Salter Scale used at Anagnwadi Centre

ICDS is currently using "Salter or Dial type scale". The Salter Weighing Scale is a reliable, light and portable scale, which can weigh children weighing up to 25 kg. The Salter scale is round in shape, with the needle in the centre. Weights are marked in kilograms around the dial. There are two variations of the Salter scale. One type has only 500 gm markings between kilograms, and the other has 100 gm as well as 500 gm markings between kilograms. The Scale has a screw on top to make the zero adjustment so that the needle points to zero before the child is weighed.

All the AWCs being visited had Salter scale with marking of 100 grams and all the AWWs had proper knowledge of weighing the children.

d) Knowledge regarding the Electronic Weighing Machine

Recently Government has implemented the electronic weighing machine to reduce the manipulation of data. All the AWWs have received the training for operating the electronic

weighing machine one month back.

As the Figure 3, shows that even after receiving the training regarding the weighing machine 75 percent of AWWs don't know the proper steps to follow while operating the Electronic weighing machine.

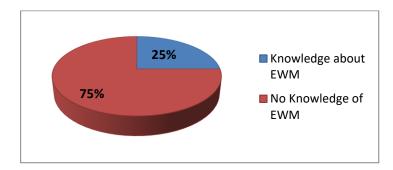

Figure 3: Figure 3 shows the pie chart showing the knowledge of the Anganwadi worker regarding Electronic weighing machine (n=50)

e) Knowledge about the WHO Growth Charts and Interpretion of Growth Charts

Growth monitoring chart register is a part of the Mother & Child Protection (MCP) Card Package, which also includes a Mother & Child Protection Card and a Guide Book. Growth monitoring chart register is for recording the weight of children as per their age up to 5years. The register is based on new WHO Child Growth Standards and contains weight-for-age growth charts. As per the new Standards, there are separate growth charts for girls and boys, as they have different weights and lengths beginning at birth and grow to different sizes related to their age. The first half of the register has growth charts for girls with 'pink border' and the second half is for boys with the 'blue border'. Each set of charts is followed by pages marked as "Index" for keeping the record of growth charts maintained in the register.

The Card having the child's name, father's and mother's name, family survey register number and weight at the time of birth are to be filled. Each growth chart has two axes. The horizontal line at the bottom of the chart is the X Axis. This is for recording the age of the child for five years and is called 'month axes'. The vertical line at the far left of the chart is the Y Axes. This is for recording the weight of the child from birth onwards and is called 'weight axis'. The horizontal lines from bottom to top of the growth chart reflect the weights from 0 to 21 kg at 100 gm interval.

As per figure 4, shows that Anganwadi worker having the knowledge of WHO Growth Chart of filling the chart but they always miss the IYCF part provided in the growth chart and use of lead in place of pens to mark the weight in the chart. And, mostly they always forgot to join the lines between two weight dots.

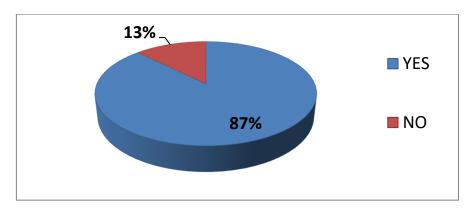

Figure 4: Figure 4 shows the pie chart showing the knowledge of the Anganwadi worker regarding WHO Growth Chart (n=80)

Importance of Interpretation: When weight points plotted at different intervals are joined with a line, we get a Growth Curve. Depending on the pattern of monthly growth of a child, the direction of the growth curve may be upward, flat or downward. An upward growth curve indicates that the child is healthy, gaining weight and is growing. However, it is not only an upward curve which is important, but also a healthy upward curve, as a result of adequate weight gain each month. Whenever the weight gain is not sufficient as per the age of the child, then the growth curve is either flat or downward.

The WHO growth charts plotting help in interpreting the following points

- ✓ Provides a visual record of the growth pattern of a child.
- ✓ Acts as a tool/aid for health and nutrition education to mothers.
- ✓ Detects growth faltering and weight loss in its early stages.
- ✓ Determines the grade of weight of child.
- ✓ Identifies beneficiaries for supplementary nutrition.

If plotted weight-for-age of a child falls on the green band, then the child's growth is normal; if it falls on the yellow band, child is moderately underweight, and if the plotted weight is on the orange band, the child is severely underweight.

Majority of the AWWs has answered almost the same. The Line which comes under the Green Column is for the normal and healthy children yellow for moderate malnourished and Red for

Severe malnourished Children and this interpretation helps in monitoring the child weight and indicator for upcoming nutrition status so that necessary measures can be taken for making child healthy and nourished.

f) Knowledge regarding the other mode of Growth Monitoring

WHO growth chart help the AWW to monitor the proper growth. Along with growth chart, there are other mode to identify the child growth is proper of not. Especially by MUAC tape, clinical signs.

MID-UPPER ARM CIRCUMFERENCE (MUAC) MEASURING TAPES

MUAC tapes are predominately used to measure the upper arm circumference of children, helping identify malnutrition. The major determinants of MUAC are muscle and sub-cutaneous fat, both important determinants of survival in malnutrition and starvation. The tape having the tri colour green, yellow and red with the markings.

As the Figure 5, shows among the interviewed AWWs 91 % of the anganwadi worker heard about the MUAC Tape, but don't know how to measure the reading. MUAC Tape was provided few years ago at anganwadi centre but not use for measuring the nutrition status.

The use of MUAC Tape is done only at the CMTC/NRC centre for enrolling the children as one of the criteria for admission. On MAMTA Divas only weight is measured and immunisation is done at AWCs

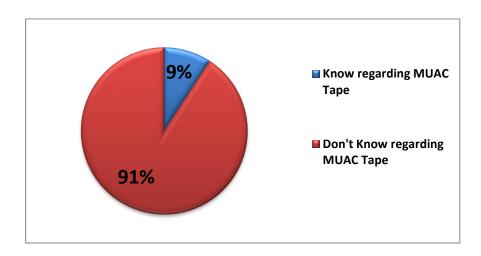

Figure 5: Figure 5 shows knowledge of AWWs regarding the MUAC TAPE (n=80)

g) Counselling of Parents regarding the growth and growth chart of Child

Counselling of the parents or guardian especially mother is very important step for maintaining the nutrition level of children through proper diet and care at home.

Basically, three steps have to follow to counsel the mother regarding growth of children.

Step 1: advice to mothers is to observe the growth curve of the child and determine the growth trend. See if the child has gained adequate weight, not gained weight or lost weight, as compared to the previous month's weight.

Step 2: ask the mother what has been happening to the child during the last month to make her child's growth pattern happen that way.

Step 3: discuss with the mother specific action(s) she can take to promote her child's growth. Counselling depend on the different age group.

A new born baby – 2 months old child

- Put the child to breast as soon as possible, preferably within one hour of birth
- Feed the yellowish first milk (colostrum) to give protection to the baby from diseases
- Exclusive breastfeeding for 6 months; do not give any other food or drinks and not even water
- Feed the breast milk whenever the child wants it, during day and night
- Breastfeed till the child is satisfied and the child stops sucking
- Continue breast feeding even if the child is sick
- Lactating mother should drink plenty of fluids (water, soups, tea, milk, lassi, etc.)
- Lactating mother should eat extra food an extra snack / meal
- Get the child BCG, DPT, polio immunization

• Get the child weighed every month

3-6 months old child

- Exclusively breastfeed the child, no other liquid to be given to the Child
- Breast feed 8-10 times during day and night
- Feed till the child is satisfied and the mother feels the breasts empty
- Continue breastfeeding during illness
- Give the child remaining doses of DPT and polio immunisation

7-11 months old child

- Give complementary foods followed by breast feeding or in between Breast feeds
- Modify the food cooked at home by: cooking it a little more, mashing it, and taking out a portion for the baby, before adding masala / chillies
- Start with a small quantity of food; increase the quantity so that Child takes half bowl/cup of food at one time (size of bowl/cup About 150 ml)
- Start semi-solid foods
- Give well cooked mashed foods like potato, banana, porridge made Of any cereal, milk/water, sugar/jiggery, bread/chapati/bhakary Soaked in milk or curry or vegetables, dal; the food should be soft but not watery
- Loose stools are due to infection and not due to introduction of Semi-solid foods
- Give plenty of fluids if child passes loose watery stools

1-2 years old child

- Child at one year should start eating the family food
- Continue to offer a wide variety of foods including family foods Such as rice, chapatti, dark green leafy vegetables, orange and yellow fruits, pulses and milk products
- Child should eat half as much as an adult in the family
- Feed the child about 5 times a day
- Feed from separate bowl and monitor how much the child eats
- Sit with the child and help her finish the serving
- Continue breastfeeding up to 2 years or beyond
- Give vitamin 'A' solution at six months interval up to the age of five Years

2-3 years old child

- Continue to feed family foods 5 times a day
- Help the child feed himself/herself
- Supervise feeding
- Ensure hand washing with soap before feeding

Majority of the AWWs has replied as per the guidelines has recommended. They do 4-5 home visits per day and discuss regarding the growth of children, tells the food which they provide at AWC is just supplement to fulfil the requirement of essential nutrition. As the district having the tribal area and migratory population .AWW face the difficulty in regular counselling but they try to call mother specially on BAL DIVAS and VATSALYA DIVAS celebration and keep open discussion and advice them to monitor the child at home and provide quality and quantity food . On BAL DIVAS award is given to child who is healthy and maintaining his/her hygiene, and advice other mothers to make their child to win the prize next time.

Table 5: Problem Faced by Anganwadi Workers

Type of problem	Yes		No	
	Number	%	Number	%
Inadequate salary	20	40	30	60
Infrastructure related	36	72	14	28
Logistics Supply related	43	86	7	14
Work overload	48	96	2	4
Excessive record maintenance	50	100	0	0
Lack of help from community	6	12	44	88
Inaccessibility of superiors	22	44	28	56

Conclusion:

The study findings highlight that 100% of AWWs having the knowledge regarding the services provided under ICDS at AWC. In terms of knowledge regarding the weight gain by the children 67% of AWWs don't have proper idea and knowledge. 75% of AWW don't know how to use the electronic weighing machine to weight the children even after the training. Depending on response to question regarding the growth chart 87 % of AWW know the importance of growth chart and the colour difference provided in growth chart and for what colour code stand for . Almost 91% of Anganwadi worker don't know how to use the MUAC tape.

Recommendation:

- i. Requirement of refresher training of all AWWs regarding the ideal weight gain of children at specific age.
- ii. Proper re-orientation of Electronic Weighing Machine at SEJA level or Block level of AWW required. This can be done by providing training hierchically ,i.e. training of supervisors, block co-ordinators and CDPOs at block level who can further train the AWWs.
- iii. Training and Counselling of Anganwadi Worker regarding the importance of MUAC Tape and using of tape along with Weighing the child to identify the malnourished child.

<u>Section A : Individual Information :</u>

Name of AWW:	
--------------	--

<u>S.No</u>	<u>Question</u>	<u>Coding</u>	
		<u>Categories</u>	
A.1	Age (years)	//	
A.2	Class Passed	//	
A.3	Marital Status:	/ /	
	[1 = Married; 2 = Widowed; 3 = Divorced, Abandoned or Separated; 4 =		
	Unmarried; $5 = Other$ (specify); $9 = Unclear$]		
A.4	Religion	//	
	[1 = Hindu; 2 = Muslim; 3 = Christian; 4 = Other (specify); 9 = Unclear]	,	
A.4	Caste group (if applicable):	//	
	[1 = SC; 2 = ST; 3 = OBC; 4 = Caste Hindu; 5 = Other (specify);		
A.5	9 = Unclear; NA = Not applicable] How long have you worked as an AWW? (completed years)	/ /	
A.5	Investigator: If less than one year, write 0)	//	
A.6	How long have you worked in this centre? (completed years)	/ /	
7.1.0	Investigator: If less than one year, write 0)	,	
A.7	Do you reside in the village in which the AWC is located?	/ /	
	[1 = Yes; 2 = No; 9 = Unclear]		
A.8	Date of starting operation	year//	
A.9	What kind of food is normally provided to children in this AWC?		
	[1 = Cooked food, same every day; 2 = Cooked food, as per weekly menu; 3 =		
	Ready to eat food, $4 = dry$ take home rations, $5 = Others$; $9 = Unclear$	/ /	
	Infants (0-3 years) Toddlers (3-6 years)	/ /	
A.10	Who is responsible for cooking the food served to children in the age group		
A.10	of 3-6 years?	//	
	$[1 = Anganwadi\ helper;\ 2 = Anganwadi\ worker;\ 3 = Local\ women's$		
	groups; 4 = Supplied at AWC by a centralized kitchen; 5 = "Ready to eat"		
	food is served or distributed without cooking; 6 = Others (please specify); 9		
	= Unclear]		
	How would you describe the overall regularity and timeliness of delivery of		
	these items? Investigator: Read Options		
	[1 = Highly Regular; 2 = Regular; 3 = Irregular; 4 = Highly irregular; 9 = Unclear]		
	Supplementary Food (Grain, panjiri, murmura, etc.)	//	
	Medicines	//	
A.11	How many beneficiaries are enrolled at this AWC?		
7.11	0-3 years	/	
	3-6 years	/	
	Adolescent Girls	/ /	
	Pregnant Women	/ /	
	Lactating Mothers	//	
A.12	How many attend on an average day (in the 3-6 age group)?	/ /	
A.13	How many children, aged 3-6, attended yesterday (or on the last working	/ /	
	day if the AWC was closed yesterday)?		

A.14	How many days of training have you received, approximately? At the time of starting work as an AWW After that	// //
A.15	How many years have lapsed since the last training you attended?	//
A.16	Do you feel that the training you have received is adequate or inadequate? $[1 = Adequate; 2 = Inadequate; 9 = Unclear]$	//

<u>Section B : Growth Monitoring Knowledge of AWW :</u>

S.No	<u>Question</u>	Coding Categories	
B.1	Do you know the importance of growth monitoring of children?	//	
	[1= Yes; 2= No]		
В.	In ICDS which standard is followed for growth monitoring?	Weight for height	
	[1= Weight for Height; 2= Height for age; 3= Age for weight	Age for weight	
		Height for Age	
B.2	What should be normal weight gain of children from birth to 3 years?		
	{average weight gain per month in grams, note the Answer of AWW}	/	
	Birth to 2 months 800 {standard}	//	
	3 months to 4 months 600	//	
	5 months to 6 months 400	//	
	7 months to 3 years 200	//	
B.3	How frequently growth monitoring should be done?		
	up to age of 3 years (once every month)	/	
	thereafter(least once in 3 months)	//	
5.4	·	//	
B.4	STEPS IN GROWTH MONITORING (Tick the response)		
	Step 1: Determining correct age of the child Step 2: Accurate weighing of the child	//	
	Step 3: Plotting the weight accurately on a growth chart of appropriate gender	//	
	Step 4: Interpreting the direction of the growth curve and recognising if the child is	//	
	growing properly	//	
	Step 5: Discussing the child's growth and follow-up action needed, with the mother	//	
B.5	Do you the name of weighing machine available at your centre?	//	
	[1 = Yes; 2 = No; 3 = available but not working; 4= hire when needed]		
B.6	Which type of weighing Machine available at your AWC?		
	Bar scale	//	
	Salter or Dial type scale	//	
	Tarring scale (digital scale)	/ /	
	Electronic Weighing Machine (Newly Provided)		
B.7	What is the maximum weight of the scale? (Check How they weight)		
	Bar scale (25 Kg)	//	
	Salter or Dial type scale (20 Kg)	//	
	Tarring scale (digital scale)	//	
B.8	Check how AWW use the Electronic Weighing Machine?	Correct	
		Incorrect	
B.9	Do you how to fill the Growth monitoring Charts?	//	
	[1 = Yes; 2 = No]		
B.10	Which colour charts for? (Tick the Correct response of AWW)		
	Boys (Blue)	//	
	Girls (Pink)	//	

		T		
B.11	What are the following lines stands for? (note the response)			
	Vertical (age)			
B.12	Horizontal (weight) What are three colours stands for provided in growth Charts? (Tick the	//		
D.12	Correct response of AWW)			
	Green (Normal)			
	Yellow (Moderately Underweighted)	//		
	Orange (severely Underweighted)	/		
B.13	What is the importance of plotting Growth Monitoring Charts? (Tick the	, <u> </u>		
	Correct response of AWW)			
	• Provides a visual record of the growth pattern of a child.	//		
	• Acts as a tool/aid for health and nutrition education to mothers.	//		
	• Detects growth faltering and weight loss in its early stages.	//		
	• Determines the grade of weight of child.	//		
	Identifies beneficiaries for supplementary nutrition.	//		
B.14	How will you interpret the growth curve? (write the response)			
	If the growth curve of a child is moving upward			
	If the growth curve of a child is flat			
D 45	If the growth curve of a child is moving downward	//		
B.15	How will you discuss the Growth Chart with the Mother? (Tick the Correct response of AWW)			
	Determine the trend of the growth curve.	//		
	• show the growth chart to the mother.	//		
	ask what she does.	//		
	• listen to the mother to find out what has happened to the child.	//		
B.16	 discuss with her specific action(s) which she can take to promote growth. What are points you discuss with mothers of specific age group children's? 	(Check with Standards)		
D.10	A NEW BORN BABY – 2 MONTHS OLD CHILD	(Check With Standards)		
	• A 3-6 MONTHS OLD CHILD			
	A 7-11 MONTHS OLD CHILD			
	• 1-2 YEARS OLD CHILD			
	• 2-3 YEARS OLD CHILD			
B.17	What are the instructions you give to mother of children fall under the folloof Growth charts? (Check with Standards) Category (Green)	owing categories (colour)		

Category (Yellow)		
Category (Orange)
