# Study of the Need Analysis to Establish a Stand Alone Diagnostic Center

A dissertation submitted in partial fulfillment of the requirements

for the award of

Post-Graduate Diploma in Health and Hospital Management

by

**Sachin Suresh Shinde** 

**International Institute of Health Management Research** 

New Delhi -110075

May, 2012

**Acknowledgement** 

Any attempt at any level cannot be satisfactorily completed without the support and

guidance of learned people. I owe a great debt to all the professionals at Health sprint for

sharing generously their knowledge and time, which inspired me to do my best during my

dissertation period.

I would like to express my immense gratitude to Dr. Bramesh Jain, Director and co -

founder Health sprint, Dr. Hari Prasad for providing support and guidance for my

learning as well as projects in the hospital and for directing my thoughts, goals and

objectives towards the attitude that drives to achieve and other aspects that one as novice

needs to be acquainted with. It has been a privilege to work under his dynamic

supervision at the hospital. My heartful gratitude to all the employees for showing keen

interest in the studies and for sharing their views in spite of the busy schedule.

We are glad to acknowledge Dr. Rajesh Bhalla dean Academic and Students' Affairs,

IHMR and mentor Prof Preetha for incorporating right attitude into us towards learning

and for helping and supporting whenever required. We are grateful to them for giving us

an opportunity to learn administrative tricks and styles, so that we come to know how a

hospital and organization caters their patients successfully and how a hospital gives

quality treatment to patient.

Thank You

Sachin Suresh Shinde

#### 1. Organizational Overview

#### **Health Sprint**

**Vision:** - we aim to connect healthcare ecosystem and its key players using web based technologies to enable valuable use scenarios, which bring value to our customers, investors and to the community we live in. Enabling **GREEN** payer provider network by transforming paper based workflows in to **INTERNET ENABLED WORKFLOWS** 

**Mission:** - Enabling web based information exchange platform, which enables reliable, speedy and transparent payer- provider workflow.

#### **Company Background**

- ➤ HealthSprint Networks is a Healthcare IT Services company, founded in May 2006 by 3 promoters who possessed desired and complementary skills from healthcare, technology and marketing domains.
- ➤ HealthSprint has formulated clear business programs in healthcare and implemented one revenue generating use scenario "web enabled in-patient insurance claims management network". This is one specific instantiation of company's larger program of 'payer- provider network"
- ➤ HealthSprint has growing customer base of providers, such as Fortis, Manipal and payers such as TTK, Mediassist, ICICI Lombard
- ➤ HealthSprint has growing employee strength, who comes from healthcare, technical and business arena.
- ➤ HealthSprint believes in enabling green payer provider network by transforming paper based workflows in to internet enabled workflows.

#### Key Business Use Scenarios, Problems and needs

#### **In-Patient Insurance Claims Information Exchange Network**

- ➤ How to exchange relevant information between payer and provider in real time easily & securely?
- ➤ How to manage payment risks for hospitals, TPA's and insurers?
- ➤ Pre-Policy Insurance Information Exchange Platform
- ➤ How to exchange information timely and seamlessly between insurance company, diagnostic centers, customers?
- ➤ How to reduce policy issue/customer capture time?
- ➤ B2C Search and Scheduling Engine
- ➤ Need for cost effective information exchange &communication platform enabling desired workflow with ease.
- Need for transparent, reliable, secure and real-time communication platform.
- > Creation of network of relevant healthcare players/entities such as Hospitals, TPA's, Insurers Patients.
- ➤ Need for cost effective business models, which remove entry barriers and enable players to make their operations more effective.

#### **Issues in cashless payer provider interaction**

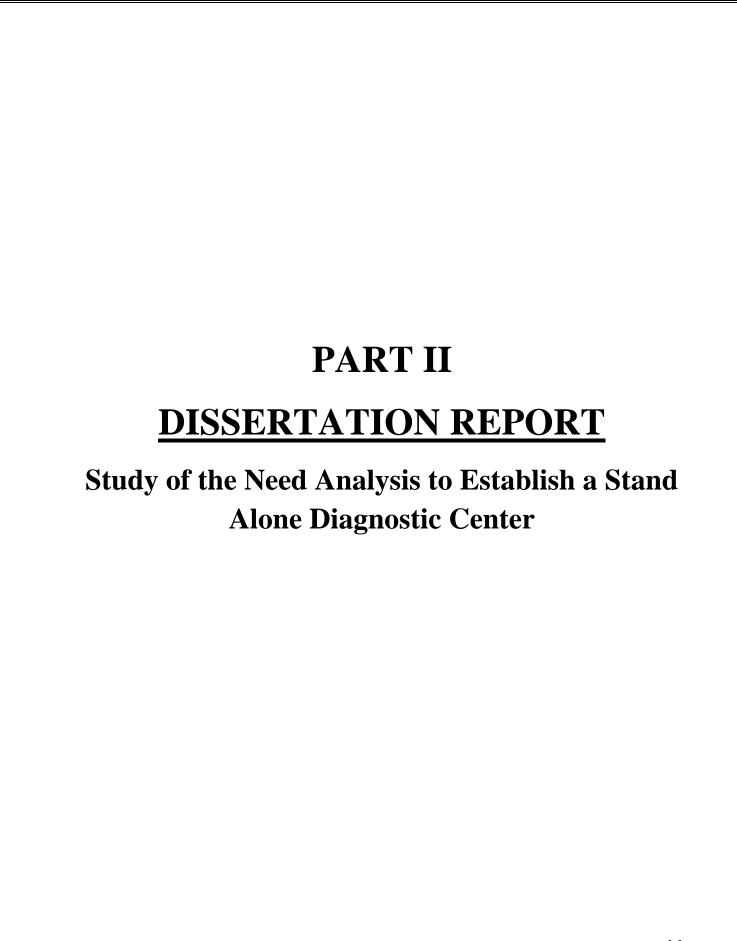

- ➤ Delay in Authorizations dissatisfied Insured patient
- Communication issues Insured/Claimant not kept in the loop regarding status of request
- ➤ Delay in submission of claims affecting Payer and Provider relationships.....missing documents, documents lost in transit
- > Tracking of claims by providers on status
- ➤ Reconciliation of payments Manual, time consuming

#### **Obstacles and challenges**

- ➤ Trained Manpower Health Insurance processes and IT platform
- ➤ ICD 10 coding adoption at Provider end
- ➤ Internet Bandwidth as claim submission will require very large files in smaller hospitals and tier 2 cities
- ➤ Partnering with Institutes like IIHMR, ICRI and Med varsity to conduct short term courses on Health Insurance Claims Management including ICD 10 coding and documentation
- Need help of Insurance cos. /TPA's to participate and promote short term courses.
- ➤ Education of Indian IT act laws process and enforcement in agreements in the ecosystem
- First move by Govt. of India (MOH) to adopt paperless transaction will motivate Insurance companies/TPA's to adopt

#### 6. Learning

- Insurance is a rapidly growing sector, it is growing at the rate of more than 40% annually.
- The bulk of the corporate hospital revenue is generated through insurance and cashless facility.
- The disallowance and loss in collecting insurance claims is more than 8% in present hospital setting.
- Delay in insurance claim settlement is more than 45 days to 3 months in some of the hospitals.
- The turnaround time for preauthorization is 4-48hrs.
- The turnaround time for final approval or enhancement is 2-12 hrs.
- Rejection or denial of cashless request from TPA is around 3-8%
- This disallowance cannot be completely removed from the system but what can be done is some measures to minimize such heavy loses beard by the providers.
- Over the years Healthsprint has been able to reduce such disallowances to a bare minimum and also turnaround time has been reduced to a greater extent with the help of i-sprint online platform.

### **Abstract**

This project was done at Health Sprint Network Ltd. during a period of 3 months i.e 10 Jan, 2012 to 31 March,2012. The main objective of the project was to conduct a prefeasibility study and formulate the facility mix for a standalone diagnostic centre and to understand important factors influencing patient behaviors in selection of diagnostic centre, which in future can be used as an important marketing tool. The idea here was to understand the existing market condition and then analyze the need gap of the services and most importantly the location analysis for the new setup.

A comprehensive health care market survey was conducted. The prime target segments, i.e., the various leading Diagnostic centers in Thane were chosen in accordance with the project during the duration allotted. The methodology used to carry out this project was retrospective and prospective study. The survey revealed the following:

- i. The market for diagnostics has been well tapped with over 100 diagnostic centres present in Thane. Most of the leading chain diagnostics have their setup in Thane like Birla diagnostic Centre, Jupiter Scan Centre etc.
- ii. Mumbai has more advanced standalone imaging centres than Thane. The trend followed by most pathology labs in Thane is to outsource the special test to the leading chain diagnostic centres.
- iii. From the market survey it's clear that the patients paying capacity is very high and they are willing to spend it for better quality results. 98% of them are paying from their pockets as the insurance companies do not cover the expenses of the diagnostic services unless it results in the diagnosis of an ailment.
- iv. Sharp rise in demand of preventive health checkups, age related check up's, preemployment and pre-insurance checkups etc in the diagnostic centres, due to increase in health awareness and increasing multinational companies in Thane.

#### The Healthcare market growth drivers in Thane are:

- i. An exponentially increasing population because of urbanisation of peripheral areas and migration of people. There was a 35 % decadal growth of population according to the census 2011<sup>1</sup>.
- ii. Around 20% of the patients, visiting the hospitals for their health care needs belong to the adjacent areas of Thane.
- iii. Increasing health awareness, paying capacity and insurance penetration of the population.

#### 1. <u>Introduction</u>

Radiology is one of the most important of the scientific and therapeutic facilities in the field of health care. Radiology is the branch of medicine which deals with the agnostic and therapeutic application of radium energy. This department is under supervision of qualified Radiologist. This is one of the areas where the spread of technology is most rapid. Any fore casting is very difficult. It is certain that major advances which are unimaginable today will appear in the next 10 years and will soon spread rapidly.

In times of illness and several diseases, the clinical signs & symptoms are often not enough to detect the diagnosis and therefore accurate treatments cannot be initiated. Correct diagnosis of the disease through various tests and examinations is very essential.

#### 1.1 Problem Statement

Is the lab only for the patients? Shouldn't labs also cater to the healthy by means of specialized preventive care centers, after all Prevention is better than cure!

There was a time, when the world's most devastating diseases occurred because of infections from various pathogens. As modern science progressed, we have conquered most of the diseases through antibiotics, with vaccinations, inoculations etc. However, new sets of equally dangerous diseases are now threatening us. Ironically these diseases are a byproduct of our affluent lifestyles, but are easily preventable. Irresponsible dietary habits, perpetual stress, smoking, excessive alcohol consumption and irregular working hours all contribute towards these diseases. There is a need to detect these diseases early and also in an effective manner resulting in the proper diagnosis of disease. But these disease are not diagnosed well due to many problems like in some places it is not available & in some places it is not well managed & also there is less availability of space. Moreover, not all the tests are available in a one particular diagnostic center. Because of this, the patient has to move from places to places to get all the tests done.

#### 1.2 Rationale of the study

#### 1,2.1 Few Facts

• One out of every 4 people in India is a Diabetic.

- In another 20 years, India will have the largest population of diabetics in the world.
- In urban India, one out of every 4 adults has Hypertension or high blood pressure.
- Diabetics and hypertensive's account for 2/3rd of the total cases of Kidney Failure.
- 10 million new cases of Cancer are reported every year and over 6 million people die of cancer every year.
- One in 30 women in the age group of 20-74 years has Breast Cancer.
- Over 30% women above the age of 50 years are likely to develop Osteoporosis.

In order to control the progress of these diseases something needs to be done – A full 25% reduction in mortality is possible in India via primary prevention.<sup>2</sup>

Most of the diseases are "silent", i.e. you often do not have any early symptoms. Therefore, regular screening tests are the only way for early detection. Hence there is a huge demand and supply gap.

So this arises the need for a diagnostic centre which focuses on preventive health checkups. These are the new generation combined setups which have an array of facilities which can be practiced by a licensed practitioner.

#### 2 Scope

The study is to understand the current market scenario of diagnostic centers in the Thane and the reasons for patients choosing to use these facilities. The study thus provides information on the various services and prices of the services that are available, and also the preferences made by the patients in choosing the clinic and service.

#### 3 Literature Review

A diagnostic centre is a place whose primary purpose is to provide complete diagnostic services like pathological, radiological and special tests. It is one roof under which all the medical tests are carried out.

#### 3.1 Services Offered

#### **Pathological Lab services**

- Clinical Biochemistry
- Clinical Pathology
- Cytopathology
- Haematology
- Histopathology
- Immunology

A complete list of tests is given in the annexure below.

#### Radiological services

- Digital cardiac Cath Labs with Stent Boost (software visualization tools) –
   angiography, angioplasty
- CT Machine (2-256 slices)
- Intelligent Ultrasound/Echo Technology
- MRI Machine (0.3-3.0 Tesla)
- Whole Body Imaging with contrast
- 1000 mA Digital X-ray
- OPG (300 500 mA)
- Endoscopy
- Bone densitometry
- 4 D Colour Doppler
- Echo cardiographs
- Mammography
- Nuclear imaging Dual head gamma camera, PET Scan

#### 3.2 <u>Schemes and packages</u>

• General Health Check Profile: It includes the following investigations – X-Ray chest PA view; ECG, Blood tests such as Hb, TLC, DLC, Blood sugar fasting &

- PP, blood urea nitrogen, serum creatinine, blood cholesterol and urine routine examination.
- Executive check Profile: It includes the following –ECG; X-Ray chest PA view;
   Ultra-sound scan of abdomen; Blood tests such as Hb, TLC, DLC, ESR, Blood
   sugar fasting & PP, Blood Urea nitrogen, serum Creatinine, Liver function tests
   (Bilirubin, proteins, SGOT, SGPT, Alkaline Phosphates), Lipid profile (Total
   Cholesterol, HDL Cholesterol, Triglycerides, LDL, VLDL), Uric acid and urine
   routine examination.
- Executive check Heart Profile: All tests in No. 2 above with TMT and echocardiography.
- Executive health check Profile Females (above 30yrs): All tests in No.2 above with mammography, Breast ultrasound and pap smear examination.
- Heart check profile: ECG, X-ray Chest PA view, Blood sugar F & PP, Lipid profile, Uric acid, Blood urea, Urine R/E, TMT, Echocardiography.
- Healthy Bride Panel: Blood group, VDRL, HbsAg, HIV, Hb Variants
- Healthy Bride groom Panel: Blood group, VDRL, HbsAg, HIV, Hb Variants.

#### 3.3 Corporate Health Care

- Pre-Employment Health Screening
- Employee Annual Health Checkups
- Drug-Abuse Screening
- Corporate Social Responsibility(CSR)/Compliance
- Food Handlers checkups
- First Aid trainings to employees and security personnel assistance

#### 3.4 Organ specific program

- Obesity control program
- Diabetes control program
- Spirometry for lungs
- Audiometry for hearing

- Stress test and ECG for heart function
- Ophthalmic check ups
- 3.5 The Clinic can conduct the following programs for your organization:
  - Onsite Wellness
- Health Checks Executive, Pre-employment etc.
- Stress Management Workshops
- Vaccinations
- Antenatal classes
- Monthly Specialists Talk on various issues like:
  - First Aid
  - Young Women Health
  - Stress Management
  - Cardiac Diabetic
  - Dentistry / Oral Health Care
  - Ophthalmic Care
- 3.6 Emergency medical assistance
- 1. Home / office visits
- **2.** Pre Insurance health check up
- **3.** Preventive health check up
- 3.7 Advantage of Stand alone Diagnostic Center over the ones attached to the hospitals

  These centers can have tie up with many hospitals hence not limited to one
  hospitals for the patients.
- Will have a variety of patients and will have many walk in clients as people don't
  prefer to go to hospitals for conducting tests alone.
- The profit earned will be much higher in standalone centres.
- Stand alone diagnostic centre will be specialized for diagnosis hence better service and quality of results are provided.
- People who just want a preventive check up hesitate in going to hospitals they will
  prefer these centres for their preventive packages.

#### 3.8 Changes with time

- 1. **Preventive health packages**: earlier only sick people were getting test done but with the change in the lifestyle and technology today there are a set of test that are conducted according to their age of the person which are advised to healthy people to assess their physical status or even diagnose an ailment in its initial stages. Or simply to warn a person of some of the future risks he/she is likely to have.
- 2. Client/Patients comfort: is the priority in today's market for the same many enhancements are talking place for e.g. office collection of samples, delivery of the reports home, online delivery of the reports, financial assistance programs, tie up with insurance companies/hospitals for cash less facilities, life style planner, emergency medical assistance, mobile imaging for bed ridden patients, better ambience for patients comfort.
- 3. Going paper less: this is the latest trend in health care industry to go paper less by using high end information technology like PACS for imaging, mobile app in I-phone and android phones for viewing the digital images anytime anywhere. The patients are given I cards which will have a chip that will contain all the old information about that person.

#### 4. Market Overview

4.1 Geographic profile of Maharashtra

Maharashtra is the third largest state in India both in terms of area as well as population. The State is bounded by the Arabian Sea in the West, Gujarat in the North-West, Madhya Pradesh in the North and the East, Andhra Pradesh in the South-East, and Karnataka and Goa in the South.

4.2 Demographic profile of Maharashtra

Maharashtra has population density of 314 per sq. km. (as against the National average of 312). The decadal growth rate of population of Maharashtra is 22.7% (against 21.5% for the country).

Of Maharashtra's total population of 96.88 million, 58% reside in the rural areas. The Sex Ratio for the State is 922 which is lower than the all-India average of 933. The Sex Ratio for Rural Maharashtra is 960. This is significantly higher than the corresponding

figure for Urban Maharashtra (i.e., 873). The Child Sex Ratio for the State stands at 913 which again is considerably lower than the all-India average of 927.

The proportion of Scheduled Caste (SC) population in Maharashtra is 10% and that of Scheduled Tribe (ST) population is 9%. The Sex Ratio for SCs stands at 952 while that for STs is 973.

The overall literacy rate for the State of Maharashtra is 77%. The male literacy rate is 86% which is significantly higher than the female literacy rate (i.e., 67%).

The table below shows Districts wise Population & Population Density in Maharashtra.

 $Table\ 1\ Districts\ wise\ Population\ \&\ Population\ Density\ in\ Maharashtra$ 

| State/District | Total population |          |          | Growth Rate (Total Population |
|----------------|------------------|----------|----------|-------------------------------|
|                | Persons          | Male     | Female   | in %) 2001-2011               |
| Maharashtra    | 112372972        | 58361397 | 54011575 | 15.99                         |

| 9    | Infant Mortality Rate                      | 33            | 55 (SRS 2007)   |

#### 4.3 <u>Health profile of Maharashtra</u>

The figures for major health indicators for Maharashtra are significantly better than the all-India figures. The Total Fertility Rate of the State (according to SRS 2008) is 2.0 which is considerably lower than the National average of 2.6. The Infant Mortality Rate is 33 (according to SRS 2008) which is lower than the National average of 53. The Maternal Mortality Ratio is 130 (according to SRS 2004-2006) which is also lower than the National average of 254. Crude Birth Rate (17.9) and Crude Death Rate (6.6) are lower than the

corresponding National average figures of 22.8 and 7.4 respectively (according to SRS 2008).

Table 3 Health Indicators of Maharashtra

| Item                                     | Value |
|--|-------|
| Total Fertility Rate (SRS 2008)          | 2.0   |
| Infant Mortality Rate (SRS 2008)         | 33.0  |
| Maternal Mortality Ratio (SRS 2004-2006) | 130   |
| Crude Birth Rate (SRS 2008)              | 17.9  |
| Crude Death Rate (SRS 2008)              | 6.6   |

#### 4.4 Economic profile of Maharashtra

The proportion of BPL persons in Maharashtra stands at 30.7% as compared to the all-India proportion of 27.5% (according to the estimates of 2004-05). The proportion for Rural Maharashtra stands at 29.6% which is lower than the corresponding figure for Urban Maharashtra (i.e., 32.2%).

The Work Participation Rate for Maharashtra stands at 42%. The proportion of Non-Workers stands at 58%. Among the workers, the vast majority belongs to the category of Other Workers (42%) followed by Cultivators (29%).

**Table 4 Economic Indicators of Maharashtra** 

| Item   | Value |
|--|-------|
| Poverty (% of BPL persons) – Overall         | 30.7  |
| Poverty (% of BPL persons) – Rural           | 29.6  |
| Poverty (% of BPL persons) – Urban           | 32.2  |
| Work Participation Rate (%)                  | 42.0  |

#### 4.5 Rural Local Governance in Maharashtra

Table 4 below gives the number of Panchayats and reserved category-wise proportion of elected representatives at all levels and at Gram (Village) level. The proportion of SC candidates is more than 20% at the overall as well as the Gram Panchayat level. The proportion of women is just above 33.3% reservation as mandated by the 73<sup>rd</sup> Constitutional Amendment Act. All the figures are as of 31<sup>st</sup> March 2008 and are therefore not latest for Maharashtra.

Table 6 No. of Panchayats and Elected Representatives in Maharashtra

| Panchayats    | No. of<br>Panchayats | Proportion of Elected Representatives |      |  |       |  |
|---------------|----------------------|---------------------------------------|------|--|-------|--|
|               |                      | (in %)                                |      |  |       |  |
|               |                      | SC                                    | ST   |  | Women |  |
| At all levels | 28,227               | 11.0                                  | 12.0 |  | 33.3  |  |
| At Village    | 27,893               | 11.0                                  | 12.0 |  | 33.3  |  |
| level         |                      |                                       |      |  |       |  |

Maharashtra is the only State in India where all the Panchayats do not go to polls at one go. Around 20% of the Panchayats go to polls at any given time. Another unique aspect of

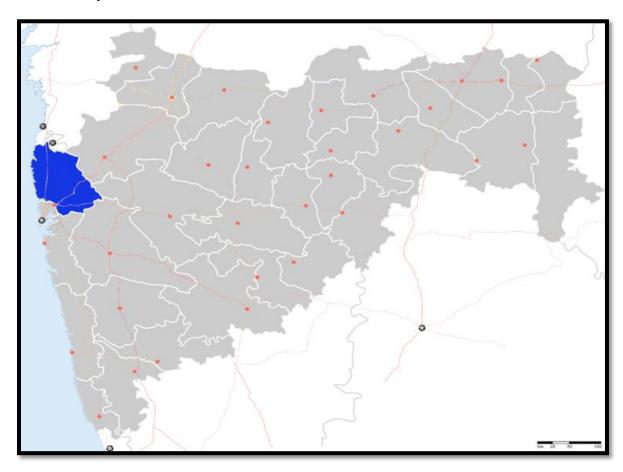

Panchayats in Maharashtra is 'Women's Gram Sabha'. These Gram Sabhas are held prior to the general Gram Sabhas. The issues raised by the Women's Gram Sabha have to be ratified by the general Gram Sabha.

#### 4.6 Thane

Thane is a district in northern Maharashtra state in western India. As of 2011 it is the most populated district in the nation. The headquarters of the district is the city of Thane. Other major cities in the district are Navi Mumbai, Kalyan-Dombivli, Mira-Bhayander, Bhiwandi, Ulhasnagar, Ambarnath, Kulgaon-Badlapur, Dahanu, Shahapur, Wada and Vasai-Virar. This is the third-most industrialised district in Maharashtra.

The area of the district is 9558 km². The shape of the district is triangular. The district is bounded by Pune and Ahmadnagar on the east, Nashik on the east and northeast, Valsad District of Gujarat state and Union Territory of Dadra and Nagar Haveli on the north. The Arabian Sea forms the western boundary, while it is bounded by Mumbai City District and Mumbai Suburban District on the southwest and Raigad District on the south.

#### 4.7. Geography

The district is the northernmost part of the Konkan lowlands of Maharashtra. It comprises the wide amphitheatre like Ulhas basin on the south and hilly Vaitama valley on the north together with plateaus and the slopes of Sahyadri. From the steep slopes of the Sahyadri in the east, the land falls through a succession of plateaus in the north and centre of the district to the Ulhas valley in the south. These lowlands are separated from the coast by a fairly well-defined narrow ridge of hills that runs north-south to the east of the Thane creek, parallel to the sea keeping a distance of about 6 to 10 km from the shores. A number of isolated hills and spurs also dot the entire district area.

**Location**: North east of Mumbai on the western coast of India.

**Best time to visit**: October to March **Languages**: Marathi

Typical coastal sultry & not very hot

**Rainfall**: Average 250 to 300 m.m.begining of June to end of September.

**Temperature**: Average 32 - 37' C to 34 - 57'C.

**Humidity**: 45% to 87% highest in month of August.

#### 4.8 Historical background

In 1817, the territory now comprising Thane district was taken over by the British from the Peshwa and it became a part of North Konkan district, with its headquarters in Thana. Since then, it has undergone considerable changes in its boundaries. In 1830, the North Konkan district was expanded by adding parts of South Konkan district and in 1833 was renamed Thana District. In 1853, the three sub-divisions of Pen, Roha and Mahad together with Underi and Revadanda agencies of Kolaba were formed into the sub-collectorate of Kolaba, under Thana, and ultimately were separated to become an independent Kolaba district in 1869 (presently known as Raigad district).

Back in 1866, the administrative sub-divisions of Thana were reorganised and renamed: Sanjan as Dahanu, Kolvan as Shahapur and Nasrapur as Karjat. Vada petha was upgraded to the level of a taluka. Uran Mahal was separated from Salsette in 1861 and was placed under Panvel. Panvel, together with its mahals of Uran and Karanja, was transferred to Kolaba district in 1883 and Karjat was transferred in 1891. A new mahal with Bandra as headquarters was created in 1917 and in 1920 Salsette was divided into two talukas — north Salsette and South Salsette. South Salsette consisting of 84 villages was separated from Thana District and included in the newly created Bombay Suburban district (present Mumbai Suburban district). North Salsette was made a mahal under Kalyan taluka in 1923 and renamed as Thana in 1926. Kelve-Mahim was renamed as Palghar. 33 villages of the Bombay Suburban district were transferred to Thana district in 1945 and 14 of them were retransferred to the Bombay Suburban district in 1946 when the Aarey Milk Colony was constituted.

After Independence, in 1949, the princely state of Jawhar was merged with Thana district and became a separate taluka. As many as twenty-seven villages and eight towns from Borivali taluka and one town and one village from Thana taluka were transferred to the Bombay Suburban district in 1956 when the limits of Greater Bombay were extended northwards in Salsette. In 1960, following the bifurcation of the bilingual Bombay State, 47 villages, and three towns in the taluka of Umbargaon were transferred to Surat district in Gujarat and its remaining twenty-seven villages were first included in Dahanu and later in 1961 made into a separate mahal, Talasari.

#### 4.9 <u>Demographic profile</u>

According to the 2011 census Thane district has a population of 11,054,131,<sup>[1]</sup> roughly equal to the nation of Cuba<sup>[8]</sup> or the US state of Ohio.<sup>[9]</sup> This gives it a ranking of 1st in India (out of a total of 640) and 1st in its state.<sup>[1]</sup> The district has a population density of 1,157 inhabitants per square kilometre (3,000/sq mi).<sup>[1]</sup> Its population growth rate over the decade 2001-2011 was 35.94 %.<sup>[1]</sup> It has a sex ratio of 880 females for every 1000 males,<sup>[1]</sup> and a literacy rate of 86.18 %.

It had a population of 8,131,849 of which 72.58% were urban as of 2001. Total literacy rate of the district is 80.67% (male 87.06% and female 73.10%). The population of Thane district in 2011 had risen to 11,054,131; this is close to 10 percent (9.84) of Maharashtra's estimated population of 112.4 million and 1% of India's Total population. The most populated district in the country, somewhat ahead of North 24 Parganas district in West Bengal which had 10,082,852 people. The density of population was estimated at 1,157 people per square kilometer. The sex ratio i.e. number of females per 1000 male was 880 which is less than the states average of 925 and the national average of 940. [13]

The southern talukas are the mostly urban areas and hence along with Marathi many other languages like Sindhi, Gujarati and Hindi are spoken. Marathi is the main language in the rural talukas.

Western coastal region is mostly populated by Kolis, the northern and the eastern talukas are populated by the Varlis, known for making stark images from red mud on house walls.

#### 4.10 Disease profile

Due to its proximity to Mumbai, presence of industries, and large scale construction work going on, the level of pollution in Thane is ever increasing. The amount of dust particles present in the air of Thane has kept pollution on the rise and given birth to air borne allergies in adults and children. Rhinitis, COPD (Chronic Obstructive Pulmonary Disease), asthma, bronchitis, etc are common diseases affecting the general population of Thane, especially children.

The many office complexes in Thane indicate that there are many working people in the district. The increasing working hours and lack of proper food are leading to stress and health problems like back pain and obesity.

Thane residents can choose from a variety of healthcare facilities as the most modern facilities are now available in large corporate hospitals like Hiranandani Hospital, Jupiter Hospital, Shree Sai Hospital, Param Hospital, Fortis Hospital. These hospitals have made Thane the hub of medical tourism in India. In addition, Thane also has several private nursing homes, the district-level Civil Hospital and several dispensaries run by ESI, ECHS and in partnership with various NGOs.

#### 4.11 <u>Socio-Economic Profile:</u>

According to the 2001 Census, the total working population in the district was 11,961,704 persons, which is 47.37% of the total population of the district. Out of total working force, 51.75% were engaged in agriculture and allied activities, 6.19% in manufacturing, service and cottage industries and remaining 30.69% in other activities. Out of total working force, the female working force was 22.89% in the district.

#### 4.12 Health Infrastructure

Healthcare facilities in Thane are in abundance. There are a plethora of diagnostic and wellness centers and the most modern facilities are now available in large corporate hospitals like Hiranandani Hospital, Jupiter Hospital, Shree Sai Hospital, Param Hospital, Fortis Hospital.

In addition, Thane also has several private nursing homes, the district-level Civil Hospital and several dispensaries run by ESI, ECHS and in partnership with various NGOs.

### 4.14 SWOT Analysis

### **SWOT Analysis of the Location**

#### **Table 12 SWOT Analysis of Location**

| STRENGTH      |  |    | WEAKNESS                                    |
|---------------|--|----|---|
|               | 20km from the air port and 4.3km from                        |    | Cost of electricity very high Rs 6 and back |
| 1             | railway station.   | 1  | up even higher Rs 12 per unit.              |
| 2             | Major hotals and malla in 5 Virginadius                      | 2  | I ask of average about discussive convices  |
| 2             | Major hotels and malls in 5 Km radius                        | 2  | Lack of awareness about diagnostic services |
| 3             | Very few competitors in a radius of 5 km                     | 3  | Cost of land high Rs 2500 to 4000per sq ft  |
| 4             | Very High paying capacity of people.                         | 4  | Lack of awareness about diagnostic services |
| 5             | The average age is high between 40 -60yrs                    |    |   |
| 6             | 2.7 Km from Eastern Express Highway                          |    |   |
|               | Proper connectivity with Mumbai. New                         |    |   |
| 7             | Mumbai, Borivali etc   |    |   |
|               |  |    |   |
| 8             | Road connectivity from all sides                             |    |   |
| 9             | Reputed schools, residential building and commercial sectors |    |   |
|               | Numerous IT companies are coming up in                       |    |   |
| 10            | this area.   |    |   |
|               |  |    |   |
| OPPORTUNITIES |  | TF | HREATS                                      |
|               |  |    | . Major threat from the chain laboratories  |
|               | Significant need gap for diagnostic centers                  |    | like Jupiter Diagnostic, Birla diagnostic   |
| 1             | in this area.  | 1  | Centres                                     |

| 2 | Many hospitals in the vicinity hence good scope for tie up.                      | 2 | Advanced hospitals may not out source any diagnostic services such as Fortis |
|---|--|---|--|
| 3 | Rapid Metro Rail Thane extension proposed in near future                         |   |  |
| 4 | Population burst predicted in near future  |   |  |
| 5 | Drainage of patients from this area and surrounding areas can be avoided         |   |  |
| 6 | Many corporate companies coming up   |   |  |
| 7 | Relatively a new market for advanced standalone diagnostic and preventive centre |   |  |
|   |  |   |  |
|   |  |   |  |

## 4.15 <u>Competitior Analysis & Service Mix</u>

Starting up of a new set up requires thorough understanding of the current market scenario, i.e., understanding the competitors and the services that are available. The market for diagnostic centers is huge with about 4000 centers in the country. There is very high competition in the market. But still, there is a huge demand as there are a few areas which are swarming with diagnostic centers, whereas, there are other areas where more are needed.

The market study about the competitors in Thane showed that it has all the major diagnostic chains in the country and many other individual players of the diagnostic centers.

The leading chains are:

- Shah Polyclinic
- Birla Diagnostic Centre
- Suyash Diagnostic centre
- Siddhi Orthopaedic Hospital
- Ram Pathological Laboratory
- Chhaya Society
- Barkhas Diagnostics
- Vaidya Jyoti Ulhas Divekar
- Jupiter Scan Centre
- Shree Imaging

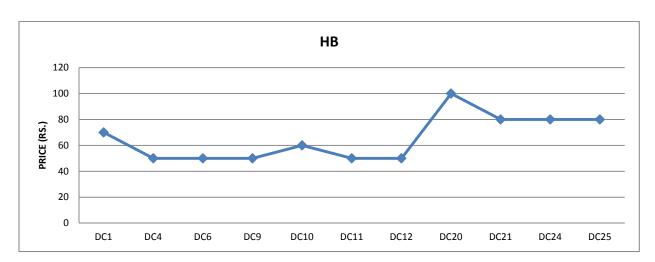

Figure 3 price range for hb varies from Rs 40 to 100 according the market survey findings

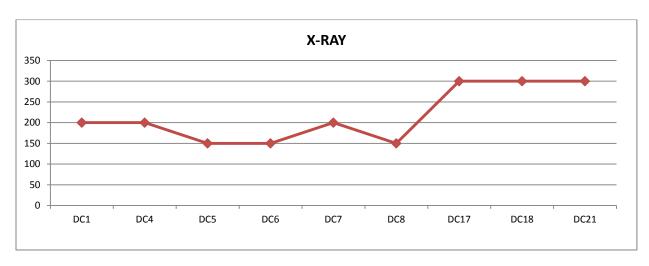

Figure 4 Price for basic X-ray varies from Rs 150 to 300 according the market survey findings.

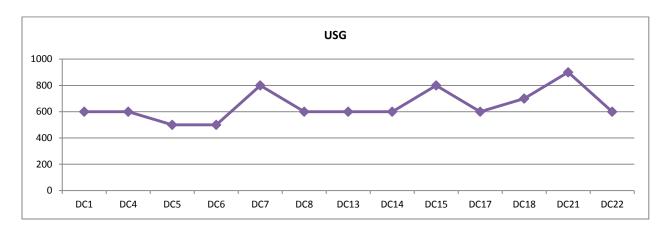

Figure 5 Price for basic USG varies from Rs 450 to 850 according the survey findings.

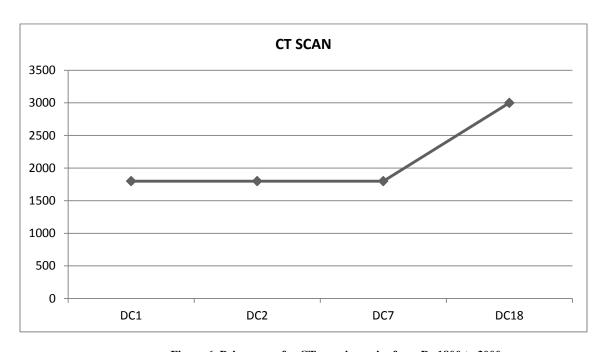

Figure 6. Price range for CT scan is  $\,$  varies from Rs 1800 to 3000  $\,$ 

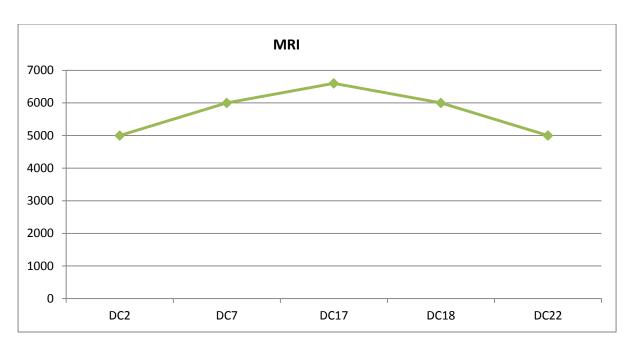

Figure 7 Price for MRI varies from Rs 5000 to 6500

## 5. Understanding from the Survey

From the survey we can deduce that the maximum centres in Thane are offering pathology and USG. The centres for imaging are comparatively much lesser. There is a huge demand for imaging but only a few centres are catering to those needs hence all the patients are being drained by them. Most of these centres are clustered in one area hence the need for more centres arises in different areas.

The current scenario is that Jupiter Diagnostic Centre has the maximum drainage from the market for pathological tests. It is very widely spread in Thane. It has the maximum tie ups with physician's hospitals and the diagnostic centres for conducting the special tests. But many clients are now shifting toward Birla Diagnostic Centre etc

The biggest competitor for imaging services will be Jupiter Scan Centres as it is the oldest centre and is the most advanced stand alone centre in the city of Thane and has the latest technology installed. Suyash Diagnostic Centre is the next for imaging due to its reasonable pricing and quick services. Coming up in a big way are Unique Diagnostic Centre and City Diagnostic Centre which are planning to expand in the near future by installing an MRI scan.

#### 6. Objectives

- To understand the current market scenario of diagnostic centre and the facility mix offered.
- To study the need gap of the market and do competitor analysis.
- To do the location analysis and plan the facility mix.

• Estimate the budget required to open up the decided facilities.

## 7. Research Methodology

Research is a systematized effort to gain new knowledge. For carrying out a research or study, different methodologies are applied which have their own pros and cons. Methodology is a systematic procedure to reach to a conclusion part of the study.

### 7.1 Preliminary Investigation

The study is conducted based on Questionnaire to collect the necessary data; the questionnaire was designed in a manner to get the maximum information needed for the understanding of the current market facility location and price mix.

### 7.2 <u>Duration of Market Survey</u>

The market survey began on  $1^{st}$  Feb 2012 and went on till  $20^{th}$  Feb 2012.

#### 7.3 Method

Structured Interview method was adopted to carry out this research.

### 7.4 <u>Tool for data collection</u>

Questionnaire was prepared after discussions with the internal and the external guide.

### 7.5 Sampling

- 'Simple Random Sampling' was used for the diagnostic centers and the Patients.
- The responses were then tabulated and analyzed.

### 7.6 Sampling Unit

• Survey was carried out in the Thane.

### 7.7 Sample Size

Diagnostic Centers: 20

Respondents: 50

### 7.8. Data Collection

Primary Data: Data was collected by carrying out the survey directly among the
respondents. There was a structured questionnaire which sleeked response from
the respondents. Personal meetings were conducted to collect the information in
the form of an interview which was put in the questionnaire by the respondent
and me.

## Secondary data:

The Secondary data mainly consists of data and information collected from company records; company profiles offices records and also discussion with employees of the organization, other options include:

- Internet
- Brochures
- Directorate of Census
- Census of India 2001
- Sample Registration Survey- 2011
- CRISIL Research
- United Nations Population Fund
- National Family Health Survey (NFHS 3)
- Economic Survey of Thane (2008-09)

### 7.9 <u>Data collection instrument development</u>

While preparing the questionnaire, the key factors that contribute towards the topic have to be considered. This enables the construction of the questionnaire easier. Before

delivering the questionnaire, plotting or testing the questionnaire effectively is very important. The reasons for this are:

- To test how long it takes to complete
- To check that the questions are not ambiguous
- To check that the instructions are clear
- To allow one to eliminate questions that do not yield data

Developing a checklist for the questionnaire can help spot any of the common mistakes that apply to your questionnaire developed. Some of the important things to be kept in mind are:

- Avoid all leading questions
- Make the questions as specific and simple as possible.
- Make sure all questions are understandable to all the respondents.
- Applicability of the questions to all the respondents
- Make sure none of the questions are double-barreled

### 7.10 Questionnaire

A structured questionnaire was designed. A Performa of the questionnaire is given in the Annexure at last.<sup>3</sup>

### 8. Data Interpretation & Analysis

During the healthcare market survey of Thane, a sample of 20 professionals and 42 consumers were interviewed. The following are the key findings of these interviews:

**Table 15 Healthcare Professionals Interviewed** 

| С       |                         |  |                            |

### 8.1 Need Gap

Professionals in Thane believe that the market of diagnostic centers has been very well tapped. Yet, there is a substantial demand of these services, in spite of the fact that almost all prominent diagnostic centers of this region are providing them. But according to the findings from the market survey, for services like PET CT scan, standing MRI, cephalometry system digital OPG, digital fluroradiography and Cone Beam CT (CBCT), patients go to Mumbai, showing the lack of these services in Thane, which can be seen in Map No. 3.

Special tests, CT scan, MRI, digital radiography, mammography, and bone densitometry are also much required specialties in the region as patients go for these services to the few diagnostic centers clustered in North South and to the major hospitals, which cater to these services.

Most of the consultants and stake holders stated that there is area domination in the field of diagnostic centers in South Thane, so there is a need to open new centers in other areas for the comfort of the patients. The trend followed by most diagnostic centers having pathological services is to outsource their special tests to the leading diagnostic center like Jupiter Diagnostic. Hence arises the need to break the monopoly by opening more specialty test centers.

Figure 8 Map showing distribution of diagnostic centers and the proposed area for the set up of the new diagnostic centre.

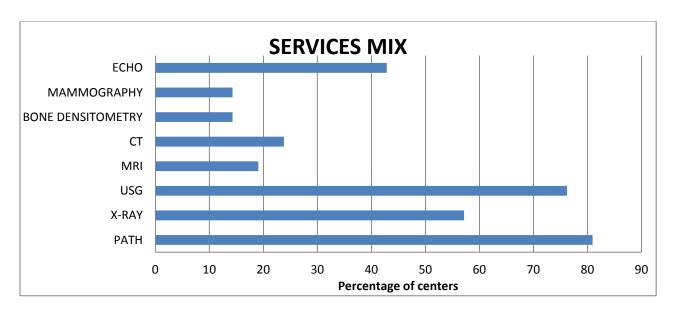

Figure 9 pathology and USG centers in Thane. 90% of diagnostic centers have pathology service according to the market survey finding.

### 8.2 Patient Referral

According to the market research findings, patients coming to the diagnostic centers are mostly referred by doctors or hospitals or nursing homes. 45 percent of the patients come in as walk ins for follow up tests and preventive packages. The rest are corporate clients or referred by TPAs.

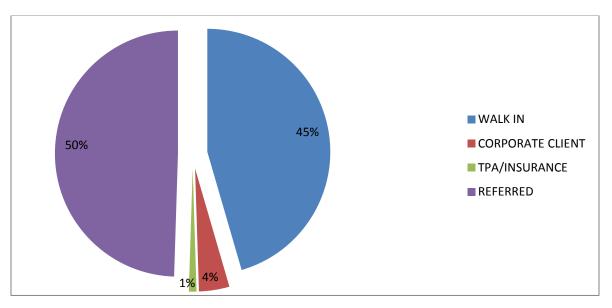

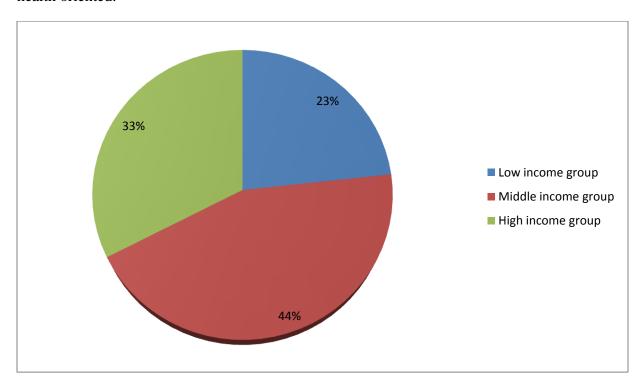

Chart1 Referral pattern

## 8.3 Paying Capacity

The market survey shows that the paying capacity of patients coming to the diagnostic centers varies from low to high income group. The maximum patients belong to the middle income group, followed by high income group and finally low income group.

Most of the professional interviewed believe that majority of the population is willing to pay for accuracy and quality of reports and services as the general population has become more health oriented.

**Chart2 Paying Capacity of Patients** 

### 8.4 Purpose Of Visit

The market survey shows that 90 percent people visiting the diagnostic center come for routine diagnostic services. With the changing lifestyles and growing awareness of preventive healthcare, many people have started opting for services such as health checkups, preventive packages and control programs for diabetes, obesity, etc. in a big way. The fact that India is the future hub for clinical trials has encouraged many diagnostic centers to start such trials.

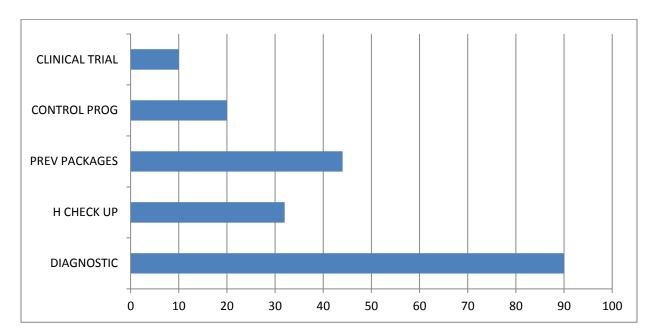

Figure 10 Purpose of Visit.

# 8.5 Average Number of Patients Per Service

According to the market survey, it is quite clear that the demand for pathology is very high. On an average, about 60 patients visit a diagnostic center for pathology services, whereas, only about 5 people visit for Echocardiogram. The demand for imaging services like MRI, and CT ranges from 14 to 20 patients, whereas, for USG and X-rays it ranges from 24 to 36 patients per day.

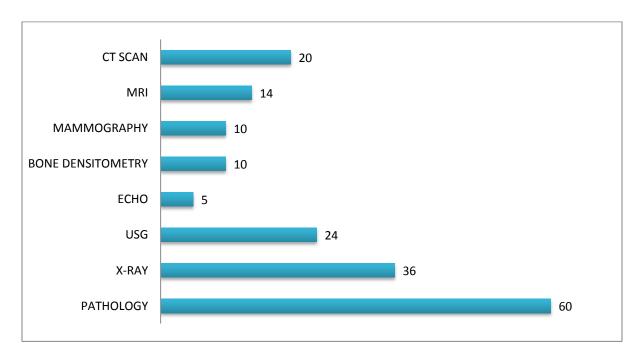

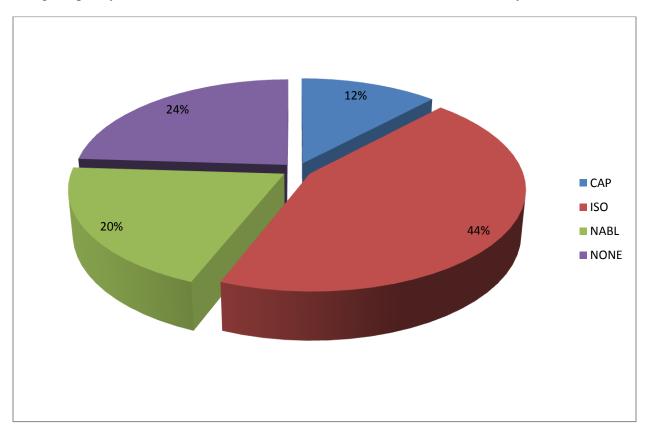

Figure 11 Average Number of Patients per Service

## 8.6 Quality parameters

Some centers are following strict quality parameters, whereas, there are a few that are not following any quality parameter. According to the market survey, it was found that 44 percent of the diagnostic centers that were visited had ISO certification, and 20% were accredited by NABL. The major diagnostic chains of India, present in Thane, follow stringent quality measures. About 12% of the centers visited were accredited by CAP, USA.

**Chart 3 Quality parameters** 

# 9. **Project Conceptualization**

The market survey analysis and the professional interview revealed that an advance and specialized preventive and diagnostic centre including MRI, CT scan and PET scan and a centre for research and development through clinical trials is the most feasible option in the southern periphery of golf course road.

### **Table 16 Facility Mixes**

# 12. Space Requirement

# 1. CT SCAN AND MRI

This department needs the maximum planning and will be the biggest revenue generating market in future. To optimize the space utilization we can have a common viewing and function area for the two machines. All the other rooms will be separate.

### Table 19 Space Requirement( Common for X-Rays)

|   | AREA IN SQ |
|---|------------|
| COMMON                                  | FT         |

### 14. Key Success Factors

- 1. **Location**: one of the biggest success factors is the strategic location of the project.
  - The average age of the people in this area is mostly between 40 to 60yrs with very high paying capacity.
  - Many hospitals in the vicinity and many more big hospitals are coming up like Fortis etc hence it good scope for tie up with them.
  - Numerous IT companies are coming up and many reputed schools, residential building and commercial sectors in this area making this area a target location.
  - Adjoining belt of Maharashtra including areas of Thane, Mulund are major catchment areas as these areas lack advance diagnostic facilities hence drainage of patients from this area will be an advantage.
- 2. **Schemes and packages** offered here are very attractive and a wide range is offered from organ specific test to age specific to disease specific, profession specific, etc. Additional and optional benefits for those who want are also given e.g. get a cardiac CT in the package for just Rs 500 extra. This will help increase the foot fall for CT scans.
- 3. **Paying capacity**: Thane also called the millennium city has the 3<sup>rd</sup> highest paying capacity in the country. This is due to major IT companies having their presence here. More over people are aware and conscious for their health so are willing to pay higher prices for quality service.
- 4. **Population burst** is expected toward the south periphery of Thane in nearly to 300 People per Acre, many people will be moving from the central parts and old Thane as this part is well planed and organized unlike old Thane. There are many high class residential projects coming up in this area it will soon become the most expensive area in Thane.
- 5. **Competition**: Although Thane has more than 100 diagnostic centre but this area is left untapped. There are very few competitors in new Thane and even lesser in a radius of 10 km. Hence very good scope for development and growth.
- 6. New market: Relatively a new market for advanced standalone diagnostic and preventive centre therefore excellent scope for growth in near future as people are becoming more conscious about their health and instead of going for therapeutic test they are going in for preventive packages.
- 7. **Development plan** of this area will attract many migrations in near future and thus increase the need for health care. A population growth of around 60% is the trend in the last decade and is expected to continue in the near future.

## 15. The Way forward

- 1. The centre will follow the best quality parameters the practice system, policies and process will be in line with the NABL system this will help in gaining a competitive advantage in the market.
- 2. This diagnostic centre is having 12 imaging specialties at the start up with time it will regularly update by installing latest technologies e.g. Pet CT scan, standing Mri etc.
- 3. The centre will follow all the LEED norms and energy conservation methods to make the building environment friendly and also to save substantial money in the long run.
- 4. The centre will be following all the registrations, licensing and statutory obligations need to be fulfilled for a diagnostic centre.
- 5. The centre must have more and more tie up especially with cardiac and cancer hospitals to utilize its Pet CT and MRI to optimum level.
- 6. World class quality service will be provided hence no compromise on the qualification of the staff. Highly qualified staff with vast experience in India and abroad will be working with full dedication
- 7. Establish good will by proving substantial discounts to the poor and under privileged and having tie-up with government bodies like CGHS, railways employees and Army personnel's to complete our duty towards our nation.

## 16. **Findings**

The market of Diagnostic centre has been well tapped in Thane. All the latest diagnostic facilities are available in the multi specialty hospitals. With over 100 diagnostic centers are present in Thane alone.

The paying capacity and the willing to pay for quality service are very high in Thane. And that's one of the main reasons for increase in demand in preventive health care and health packages.

From the survey we can deduce that about 90% centers in Thane are offering pathology and USG. The centers for imaging are comparatively much lesser. There is a huge demand for imaging but only a few centers are catering to those needs. Most of these centers are clustered in one area hence the need for more centers arises in different areas.

The Patients prefer the centers providing multiple services under one roof so that all the tests can be done at one place. The services fetching the maximum no of patients are the pathological services, USG, and X-ray's.

Nearly 20% of the patients visiting the centre are from small villages around Thane as the quality of health care is very poor there. So Thane is becoming the hub for diagnostic for the areas north and south of Thane.

Quality can be an issue for concern as most of the diagnostic centers are not ISO and NABL approved. The personal interviews revealed that not many of the diagnostic centers were interested in even having it near future.

Another important finding is that 30% of the radiologist is planning to upgrade their set up by installing CT scan and MRI's. The current trend followed by 80% centers having imaging is to use re-furbished machines.

The centers proving add on services like home /office sample collection, online report delivery have a greater in flow of patients. The latest trend being followed is to provide ambulance service and centers are also trying to make their centers run 24 hours.

Diagnostic centers have many tie up with hospitals to have a good foot fall of patients. Now day many diagnostic centers are also having tie-ups with the IT companies and insurance company for services like pre-employment checkups and pre insurance checkups.

Most of the centers have 95% permanent doctors only 5% of them are visiting facilities and they are given commission per patient.

95% of the diagnostic centers are doing no marketing for promoting their centers. Except for some who market them self's at conferences and medical journals.

With time there has been advancement in the reporting system, most of the centers are having computerized or digitalized reporting system. Tele radiography is also becoming popular. One of the centers has also installed pacs.

## 17. **Conclusion**

The field of Diagnostic centers has a huge scope to grow in Thane. There are many successfully running centers already present with many different services. Most of the chain diagnostic has very well penetrated the market too. Even then there is a huge need gap for advanced imaging services. Further due to the exponentially growing population this need gap will also keep increasing in future. Hence arises the need to set up many new diagnostics centers in the city. The most preferable location for the setup of new centre according to the location analysis is the southern periphery region of Thane, i.e., around the golf course extension road.

The level of completion faced will be very high as most of the major competitors have very old setups. The chain diagnostics have penetrated the market very well leaving very narrow scope of growth. Hence excellent marketing scheme and new and innovative ideas will be needed to compete and stand out in the existing market. Best quality, minimum price, quick service, additional comfort services for patients and all services under one roof could be the best way to move ahead. The centre must have all high end imaging services, pathology test: routine and special tests, should encourage preventive check up and last but not the least indulge into clinical trials in a big way as in near future India is going to the hub for clinical trials.

It should be kept in mind starting a new set of Diagnostic services involves huge investments of finances, time, manpower and a lot of patience as the return on the investments will not be very fast. From our survey ROI can take a time of 3 to 5 years depending on the business model being followed. An approximate investment of Rs 4 cr. will be needed to start up a facility the total budget will be approximately 10 cr. Profit after tax in 5 years will be of 11crs.

The three months that I spent at Healthsprint has been very enriching experience and it helped me to gain valuable insights in the field of diagnostics. The fact that a lot of my work was out in the field and not restricted to sitting in an office is probably the strongest contributor to my learning in this project. It helped gave me a chance to speak to many learned people. This project also gave me an opportunity to learn new things like feasibility study, location analysis, strategic planning, developing the budget etc. Overall, this three months long internship was a very enlightening and enriching learning experience for a fresher like me.

## 18. Future of Diagnostics

This is one of the areas where the spread of technology is the most rapid. Any fore casting may be incorrect but what is certain is that major advancement which is beyond imagination today will appear in near future. The CT scan and MRI will reach the phase of maturity. The unit cost of these procedures will also drop and these services will be very wide spread. Processing of image will improve and the appliances will become small and more widely available.

Digitalization of imaging will lead to disappearance of films as the resolution on screen and paper improves. This will also permit networks for transmitting images within the hospital and between hospitals and external practitioners. Invasive radiology will continue to develop and become more popular like: intra luminal dilatation, transceutanious biopsies, chemonucleolysis, catheterization and embolisation, drug delivery to specific sites etc.

Automation of surgeries under radiological surveillance has prospects which are full of promises and difficult to imagine. The road ahead for diagnostic centers is very bright especially if the latest trends in the market will be followed.

India will be the hub for Clinical trials by 2010, global pharma majors would spend around \$1-1.5 billion just for drug trials in the country as India has a vast, unwieldy population, a plethora of diseases, and rampant poverty which has forced almost all the top names in the pharmaceutical world to zeroed-in on India for conducting clinical trials and these trials are now being out sourced to standalone diagnostic centers hence it is one of the biggest development in this field.

Going paper less: this is the latest trend in health care industry to go paper less by using high end information technology like PACS for imaging, mobile app in I-phone and android phones for viewing the digital images anytime anywhere. The patients are given I cards which will have a chip that will contain all the old information about that person.

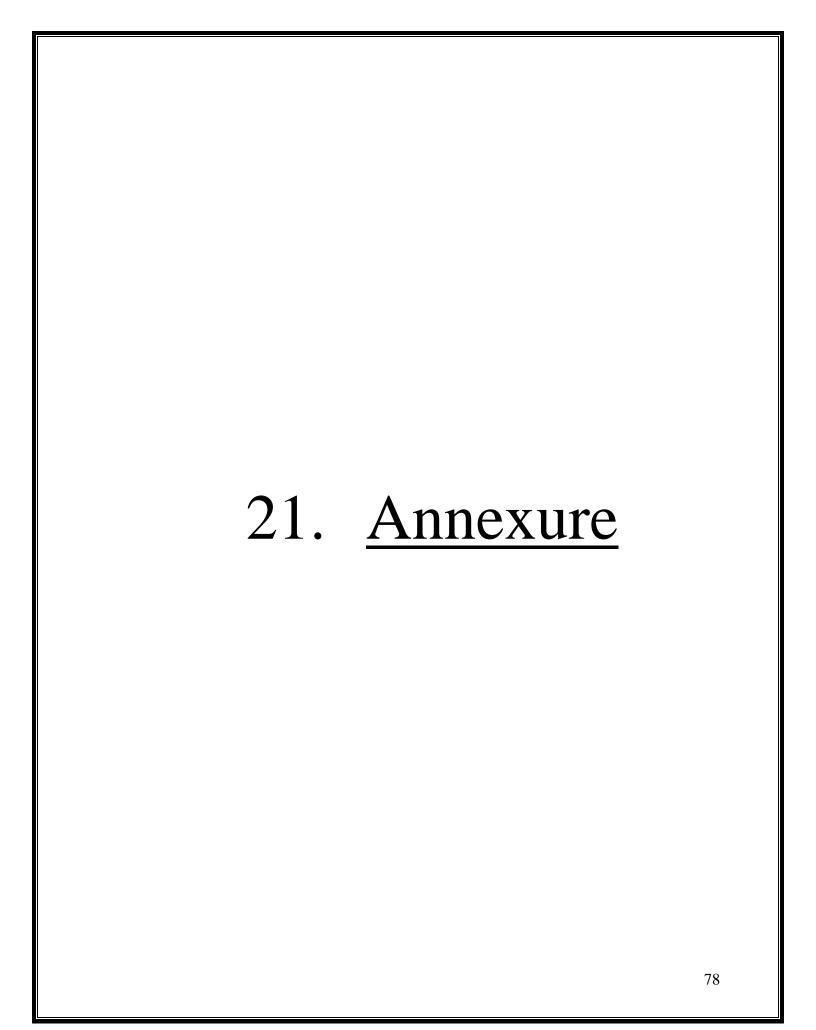

## 19. Research limitations

Some difficulties were faced during the course of the internship, which caused some limitations in the project.

- Some of the diagnostic centres were reluctant in sharing information about their centre as they had a busy schedule and for fear of misuse of data.
- Many of the big diagnostic chains, which were contacted, did not even give appointments.
- Limited number of patients was interviewed. The reasons behind this being the unwillingness of patients to take part in the survey, and the staff of the diagnostic centre not allowing to interview patients.
- Lack of time: The time period of three months is not enough to know whole behavioural patterns of the complete market. More time is required to do a more extensive study to come up with better interpretations and solutions. All the suggestions given in this report are based on the survey done in these three months. One can come up with more alternatives if the number of people surveyed and the time period for carrying out the survey is more.
- Lack of qualified doctors: Some of the doctors who underwent the survey were less aware about the market trends.
