

To Study the changes in Physician's perception about  
Electronic Health records on its usage over a period of time

**Submitted By**

**Vipin Vasudev S Pai,  
2<sup>nd</sup> Year, Healthcare IT,  
IIHMR, New Delhi**

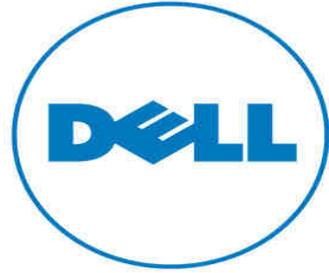

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Dell Services, Noida

- Dell Inc. (Dell) is a global information technology company that offers its customers a range of solutions and services delivered directly by Dell and through other distribution channels.
- Founded in 1984 and is headquartered in Round Rock, Texas.
- In 1985, the company produced the first computer of its own design, the "Turbo PC", which sold for US\$795.
- Dell has grown by both increasing its customer base and through acquisitions since its inception; notable mergers and acquisitions.

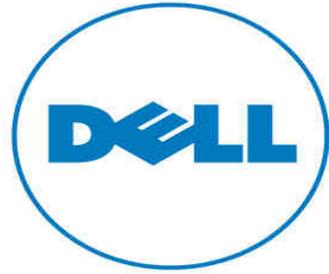

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Dell Services, Noida

- Perot Systems was an information technology services provider founded in 1988 by a group of investors led by Ross Perot and based in Plano, Texas, United States, which is then renamed as Dell Services.
- On February 3, 2012, it held a worldwide portfolio of 3,449 patents and had an additional 1,660 patent applications pending.
- The Company designs, develops, manufactures, markets, sells, and supports a range of products, solutions, and services.
- The Company also holds licenses to use numerous third-party patents.

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

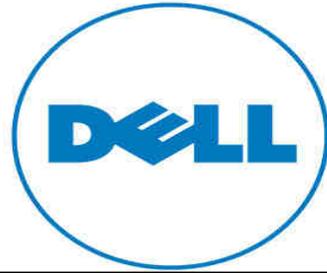

Dell Services, Noida

# Internship Report

(2<sup>nd</sup> January 2012 – 30<sup>th</sup> March 2012)

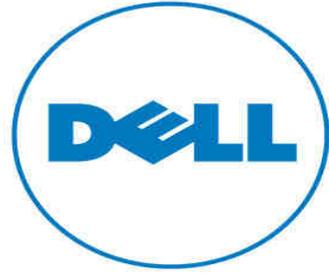

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

# Dell Services, Noida

## Lessons Learned during Internship

- VistA and its Modules
  - Open source Software, Mirth Integration engine, HL7 messaging
  - Pharmacy Module and its drug build up
  - Pharmacy space utilization and process optimization
  - VistA CPRS, BCMA, Diet and Lab
  - Configuration and Mapping Process
  - How to train end user and trainers
  - How to schedule
  - What all to cover for training

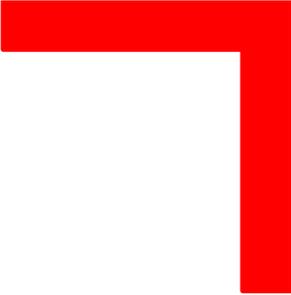

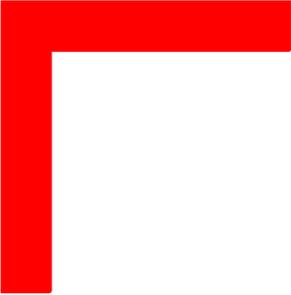

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

# Dissertation Report

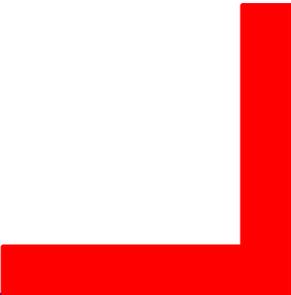

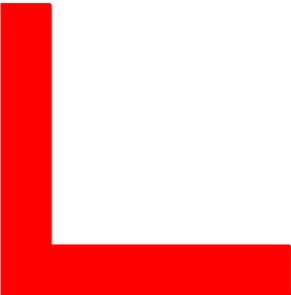

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

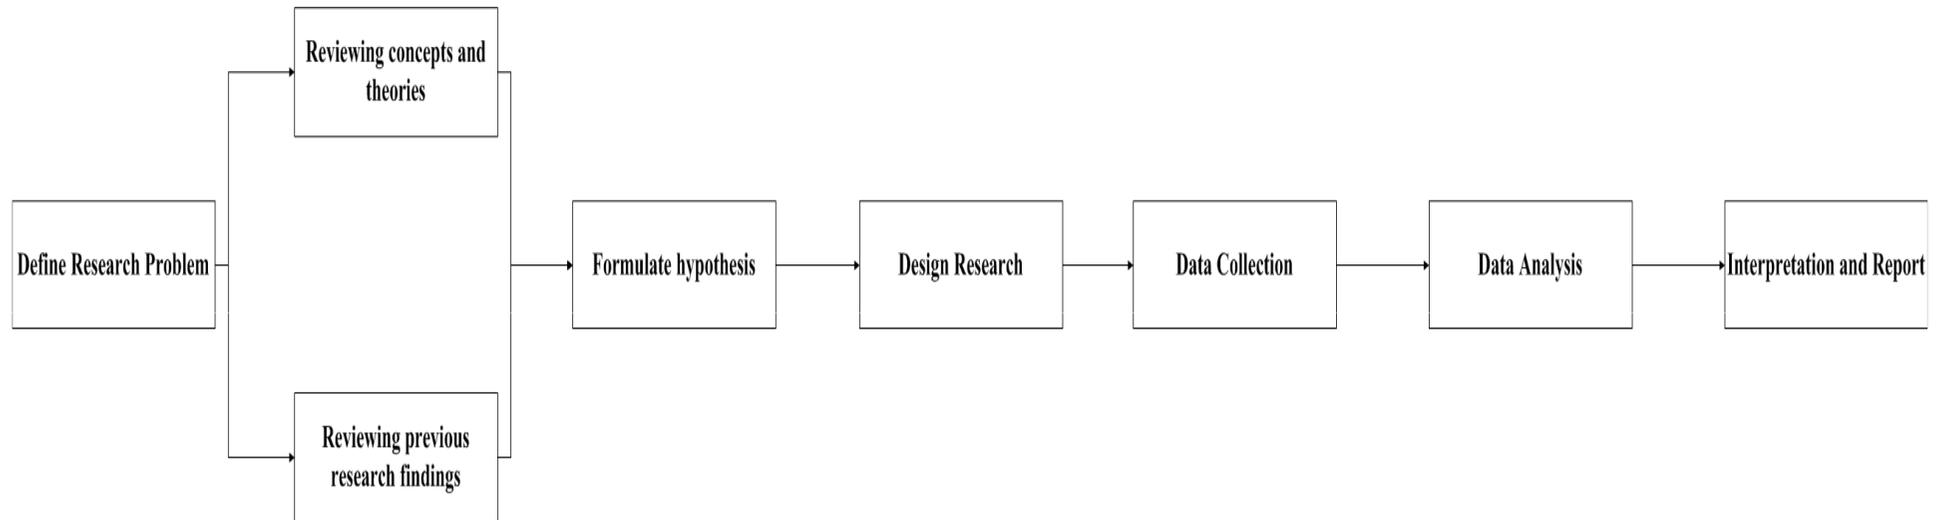

# Topic

To Study the changes in Physician's perception about  
Electronic Health records on its usage over a period of time

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

# Research Process

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Research Problem

Most of the EHR/EMR Implementation across the globe has failed. EMR/EHR system implementations have even higher failure rates. Industry studies reveal failure rates of 50%, others as high as 70%.

Among the most notable challenges to implementing clinical information systems are the varying levels of acceptance and use by healthcare providers and employees.

- Why Physician's are reluctant to use this system which has got many advantages?
- Do they really know about these advantages?
- Is this reluctance because of the workload?
- Is there any changes in perception among users over a period of time.

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Research Problem

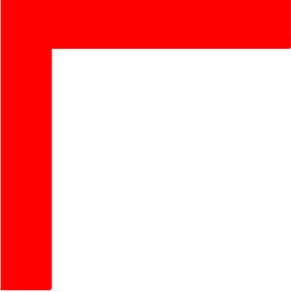

- To assess whether Acceptance has got dependence on age group, Highest qualification.
- To assess whether Workload/time has got any direct influence on attitude of physician and also acceptance.
- To confirm Technology Acceptance Model and to assess whether EHR acceptance is dependent on Patient Satisfaction on EHR

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Purpose of the Study

- The primary purpose is to apply a revised TAM in order to predict & to explain the extent to which the EHR system is perceived as useful and easy to use by physicians.
- To explain whether it is well accepted, adopted, and used by them in their Clinical practice.
- The other objectives of this study are to examine and explain the perceptions-behavioral intentions-behavior relationship within TAM, and test various hypotheses based on these relationships.
- This will further help researchers and practitioners understand the information technology acceptance behavior of physicians in a healthcare organization.

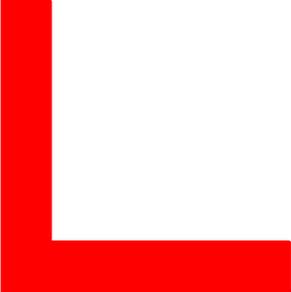

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

# Objectives

## **General objective**

To Study the change in Physician's perception about Electronic Health records on its usage over a period of time

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

# Objectives

## Specific Objectives

- To compare the physician's perception on ease of use about EHR Pre Go Live and Post Go Live.
- To compare the physician's perception on usefulness about EHR Pre Go Live and Post Go Live.
- To compare the physician's perception about workload/ time Pre Go Live and Post Go Live.
- To compare the physician's attitude on EHR and its acceptance Pre Go Live and Post Go Live.
- To study the influence of perception on usefulness about EHR on attitude of the user.
- To study the influence of perception on ease of use of EHR on attitude of the user.
- To study the influence of workload on attitude and acceptance of EHR.
- To study the influence of age and qualification on acceptance of EHR

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

# Literature Review

- Staff Perception Survey before and after EHR/CPOE Implementation, Jean Loes, Marcia Ward, Douglas Wakefield, John O'Brien.
- A Study of factors influencing physician adoption of Electronic Medical Records Technology, Audrey P. Price.
- Among the most notable challenges to implementing clinical information systems are the varying levels of acceptance and use by healthcare providers and employees:
  - Research has shown that experiences shape the degree to which users will accept the technology initially (Dixon, 1999; Herbert & Benbasat, 1994).
  - Research has shown that users' attitudes regarding risks to service quality and disruptions in workflow hinder implementation (Hu, et al., 2002; Zheng, et al., 2005).

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

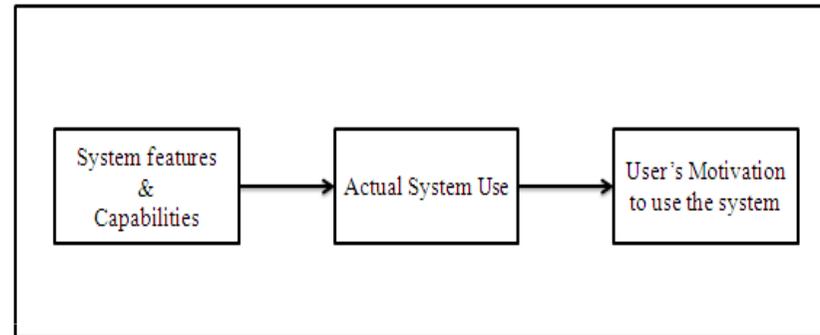

## Literature Review continued.....

- All of the significant models of information technology use suggest that perceptions of the impact on work and outcomes are significant determinants of technology use and adoption (Kufafka, et al., 2003).
- Measures have been created to explore attitudes toward technology including perceived usefulness and ease of use (Davis, 1989).

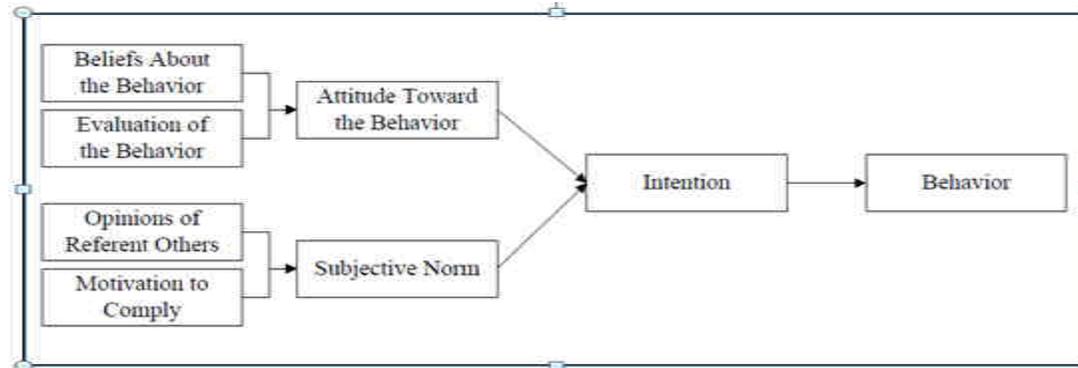

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

# Literature Review continued.....

## Theoretical Framework:

Conceptual Model for TAM

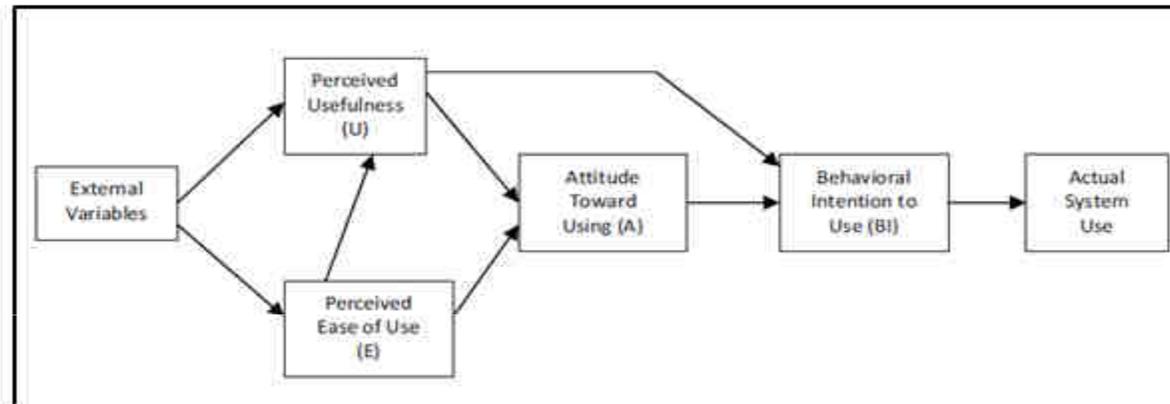

Theory of Reasoned Action

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

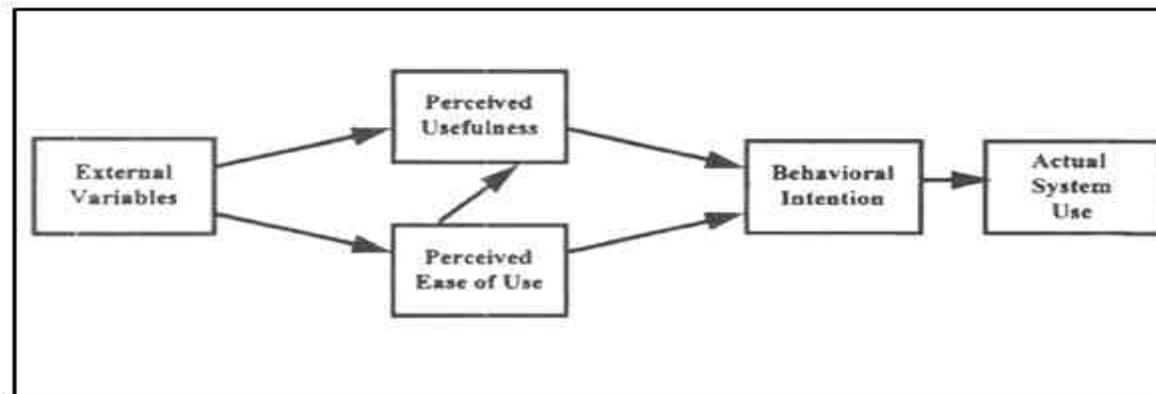

# Literature Review continued.....

Theoretical Framework:

First Modified version of TAM

Final version of TAM

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

# Hypothesis

- H1: Perceived usefulness will influence physician acceptance of electronic health records.
- H2: Perceived ease of use will influence physician acceptance of electronic health records
- H3: Acceptance of electronic health records is dependent on satisfaction of patients
- H4: Acceptance of electronic health records is dependent on workload
- H5: Acceptance of electronic health records is dependent on qualification
- H6: Acceptance of electronic health records is dependent on the age of the physician

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

# Research Methodology

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

# Study Design

- This study was conducted in ABC Multispecialty hospital owned by ABC Business Group at XYZ location.
- The study was designed as longitudinal study and was carried out over a period of nine months.
- The survey for the study was conducted three times.
- Same samples were used for all the three studies.

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

# Study Design

- The study was conducted as follows
  - Wave 1 – June 2011 Before Go Live of EHR (after scheduled training sessions)
  - Wave 2 – November 2011 3 months after Go Live
  - Wave 3 – February 2012 6 months after Go Live
- Go Live – Last Week of July 2011

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

# Study Design- Variables Studied

- Perception about usefulness
- Perception about ease of use
- Workload/ Time
- Attitude
- Acceptance
- Demographic Characteristics
  - Age group
  - Gender
  - Highest Qualification
  - Prior experience on EHR

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

# Sample and Sample Size

- Responses from Physician's were taken
- Selected physician's whose training schedules were over.
- The regular staff from various different departments of the same hospital.
- Physicians which include Junior Residents, Senior Residents, Consultants, and Senior Consultants.
- A sample size of 100 was targeted
- 100 Respondents were taken for the first study.
- Wave 3 Phase 60 physicians were present, others had either left or were gone to other locations

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

# Sampling Method

- Simple random sampling method

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

# Data

- Primary data collection method used for data collection of this study.
- Primary data were collected with the help of questionnaire which consisted of closed ended questions.
- The responses for these questions were on Likert scale.
- The questionnaire consists of only closed ended questions. 5 Point Likert scale used to rate all the questions i.e.
  - Strongly Disagree
  - Disagree
  - Neutral
  - Agree
  - Strongly Agree

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

# Tools Used

- Data received were entered into SPSS for statistical analysis.
  - Mean
  - Factor Analysis
  - Reliability (Cronbach's alpha reliability coefficient)
  - ANOVA
  - KMO & Bartlett's Test

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

# Result & Analyses

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Results & Analyses

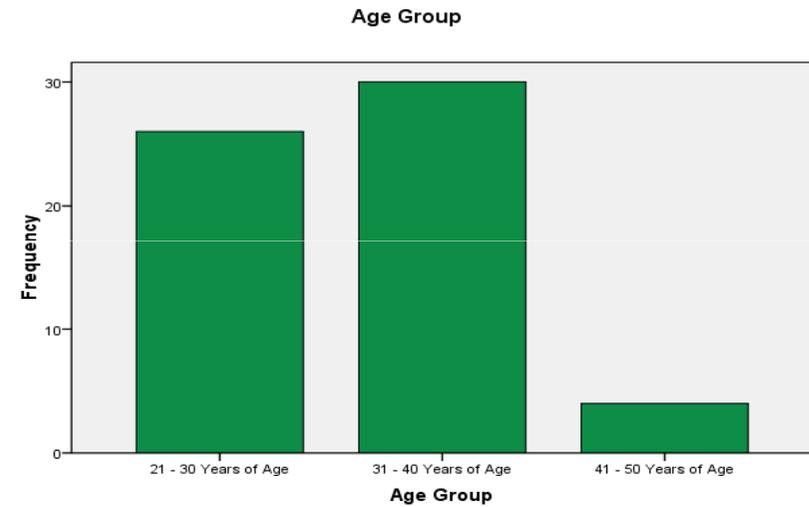

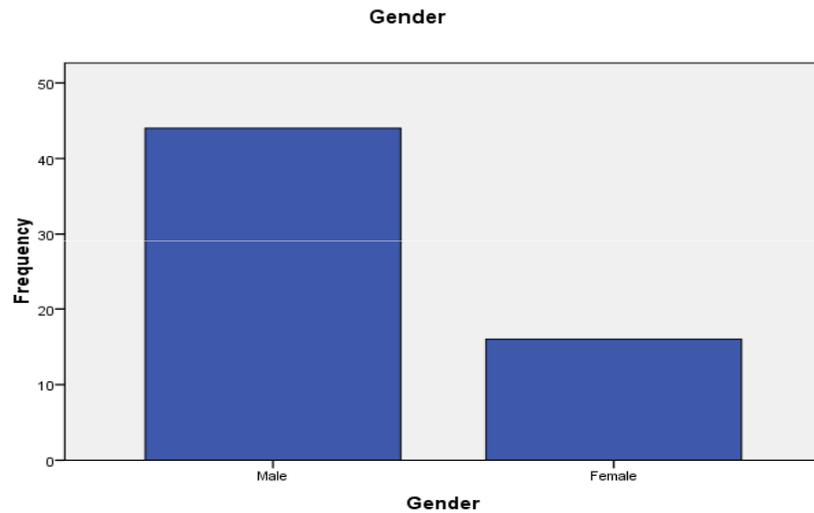

Characteristics of respondents:

		Wave 1	Wave 2	Wave 3

### Mean Scores Comparison:

Code	Questions	Mean Response		
		Wave 1	Wave 2	Wave 3
A1	Computers are necessary for delivering quality healthcare	3.45	3.52	4.1
A2	CPRS will reduce the patient record retrieval time	3.5	3.12	4.22
A3	New system will decrease gap between different stake holders	3.38	2.45	3.48
A4	New System will increase coordination between different stake holders	3.45	2.45	3.55
A5	CPRS will optimize patient safety	3.45	2.15	3.43
A6	CPRS will increase workload	3.73	4.77	3.08
A7	CPRS will increase consultation timings	3.87	4.77	2.92
A8	CPRS will decrease the number of patients consulted	3.55	4.12	2.97
A9	CPRS is Userfriendly	3	1.3	3
A10	CPRS will reduce medication errors	3.65	2.1	3.37
A11	CPRS is Useful	3.43	2.1	3.43
AA1	I am satisfied with CPRS	3.33	2.15	3.15
AA2	I will encourage my colleagues for using CPRS	3.33	2.08	3.17
AA3	CPRS will support physicians and nurses in providing efficient care	3.55	2.3	3.6
AOA1	Overall my attitude about CPRS is positive	3.23	2	3.13

Within Groups	5.690	29	.196		
Total	14.933	59			

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Results & Analyses *continued.....*

### Hypothesis Testing:

H1: Perceived usefulness will influence physician acceptance of electronic health records.

• **The hypothesis is significant and Hypothesis is accepted for Wave 1 and Wave 2 , Rejected for Wave 3.**

• From this we can infer that acceptance of EHR is influenced by perceived usefulness in initial days of implementation but over a period of time perception about usefulness is not dependent.

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Results & Analyses *continued.....*

### Hypothesis Testing:

H2: Perceived ease of use will influence physician acceptance of electronic health records.

#### ANOVA

Overall my attitude about CPRS is positive

## Results & Analyses *continued.....*

### Hypothesis Testing:

H2: Perceived ease of use will influence physician acceptance of electronic health records.

• **The hypothesis is significant and Hypothesis is accepted for Wave 2 and Wave 3 , rejected for Wave 1.**

• We can infer that physicians realize that EHR is easy to use after using it over a period of time and on usage of application this will influence acceptance of EHR. After training the physician's felt that it's not user friendly and system is difficult to use.

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Results & Analyses *continued.....*

### Hypothesis Testing:

H3: Acceptance of electronic health records is dependent on satisfaction of patients

Wave 1 : Pre implementation. Patient satisfaction question was not included

#### ANOVA

Overall my attitude about CPRS is positive

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	29.891	2	14.946	35.336	.000
Within Groups	24.109	57	.423		
Total	54.000	59			

#### ANOVA

Overall my attitude about CPRS is positive

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	2.307	3	.769	3.411	.024
Within Groups	12.626	56	.225		
Total	14.933	59			

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Results & Analyses *continued.....*

### Hypothesis Testing:

H3: Acceptance of electronic health records is dependent on satisfaction of patients

- **The hypothesis is significant and Hypothesis is accepted for Wave 2 and Wave 3 .**
- Acceptance of EHRs is dependent on satisfaction of patients. The hypothesis is proved in both the waves. This means that satisfaction of patients will influence acceptance of EHR.

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Results & Analyses *continued.....*

### Hypothesis Testing:

H4: Acceptance of electronic health records is dependent on workload

Wave 1 : Reliability Test value was poor.

#### ANOVA

Overall my attitude about CPRS is positive

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	17.679	2	8.840	13.872	.000
Within Groups	36.321	57	.637		
Total	54.000	59			

#### ANOVA

Overall my attitude about CPRS is positive

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	3.276	10	.328	1.377	.219
Within Groups	11.657	49	.238		
Total	14.933	59			

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Results & Analyses *continued.....*

### Hypothesis Testing:

H4: Workload caused by electronic health records will influence acceptance

- **The hypothesis is significant and Hypothesis is accepted for Wave 2 . In wave 3 Hypothesis is Rejected**
- Acceptance of EHRs is dependent on time/ workload. The hypothesis is proved in Wave 2. This means that workload caused by EHR will influence acceptance of EHR.
- Wave 3 tells that workload doesn't have much influence on acceptance of EHR as time passes.

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Results & Analyses *continued.....*

### Hypothesis Testing:

H5: Acceptance of electronic health records is dependent on qualification of the user

#### ANOVA

Overall my attitude about CPRS is positive

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	.195	2	.097	.335	.716
Within Groups	16.539	57	.290		
Total	16.733	59			

#### ANOVA

Overall my attitude about CPRS is positive

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	.000	2	.000	.000	1.000
Within Groups	54.000	57	.947		
Total	54.000	59			

#### ANOVA

Overall my attitude about CPRS is positive

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	.268	2	.134	.522	.596
Within Groups	14.665	57	.257		
Total	14.933	59			

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Results & Analyses *continued.....*

### Hypothesis Testing:

H5: Acceptance of electronic health records is dependent on highest qualification

- **The hypothesis is not significant and Hypothesis is Rejected for all the three Waves.**
- Acceptance of EHRs is not dependent on Highest Qualification of Physician.

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Results & Analyses *continued.....*

### Hypothesis Testing:

H6: Acceptance of electronic health records is dependent on the age of the physician

#### ANOVA

Overall my attitude about CPRS is positive

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	.482	2	.241	.845	.435
Within Groups	16.251	57	.285		
Total	16.733	59			

#### ANOVA

Overall my attitude about CPRS is positive

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	3.335	2	1.667	1.876	.163
Within Groups	50.665	57	.889		
Total	54.000	59			

#### ANOVA

Overall my attitude about CPRS is positive

	Sum of Squares	df	Mean Square	F	Sig.
Between Groups	.422	2	.211	.828	.442
Within Groups	14.512	57	.255		
Total	14.933	59			

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Results & Analyses *continued.....*

### Hypothesis Testing:

H6: Acceptance of electronic health records is dependent on the age of the physician

- **The hypothesis is not significant and Hypothesis is Rejected for all the three Waves.**
- Acceptance of EHRs is not dependent on age of Physician.

180 Days Post Go Live:

### Wave 3

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Conclusion

- There is a strong correlation between Perception about usefulness and ease of use on attitude of the user in the early days of implementation.
- There is a strong correlation between Perception about usefulness and ease of use on acceptance of the EHR by user in the early days of implementation.
- There is a strong correlation between attitude of the user and acceptance.
- There is no correlation between the acceptance of EHR and workload caused by it.

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Lessons Learned

- Lack of communication about vision & benefits creates ambiguity in the minds of users.
- Success of Implementation is directly related to end user interest and commitment.
- Workflow changes/ clinical transformation is difficult in established locations.
- According to physicians more time is consumed in making records in the system.
- Lack of infrastructure makes the users irritated.

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

# Recommendations

## Recommendation 1

- When the users are called for the training sessions, the very first thing they need to be communicated is the Vision in detail (Communicating the Vision).
- After that they need to be given a brief overview of the complete system by communicating them about all the different modules in that system.
- They need to be made aware of the benefits of the complete system.
- The entire change in work flows can be demonstrated during the training sessions and also reinforced with in the mind of the users. This will help to avoid confusion during Go- live.
- Proper and systematic training should be given to all users & stakeholders

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Recommendations *continued.....*

### Recommendation 2

- There should be a strong leadership in pharmacy which keeps a check that the pick list is being delivered at the scheduled time to the wards.

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Recommendations *continued.....*

### Recommendation 3

- Identifying Super Users/ Trainers
- Choose the person who is having good communication & leadership skills, sound computer knowledge and work processes. As the success of implementation depends on training, these criteria's should be followed
- Super user & End user training
- There should be a systematic training for both the users.
- After a detailed theory session, they can be shown with the live scenarios.
- Hands on practice can be done along with theory sessions.
- But after the entire theory sessions few practical session should be there, in which the user will enter the patient records into the system systematically.

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Recommendations *continued.....*

### Recommendation 4

- When the users are called for the training sessions, the very first thing they need to be communicated is the Vision in detail (Communicating the Vision).
- After that they need to be given a brief overview of the complete system by communicating them about all the different modules in that system.
- They need to be made aware of the benefits of the complete system.
- The entire change in work flows can be demonstrated during the training sessions and also reinforced with in the mind of the users. This will help to avoid confusion during Go- live.
- Proper and systematic training should be given to all users & stakeholders

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Recommendations *continued.....*

### Recommendation 5

- All the Super users & End users can be provided with the suitable training materials and quick reference guides which should contain step by step process of operating the system.
- They can be provided with the animated presentations. The users can refer to these documents whenever they forget any step while operating the system. This will be of great help to them and feel comfortable in using the system.

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

## Limitations

- Getting responses from the physicians were difficult.
- The Post go Live was only 6 months Back. Time frame between Wave 1 and Wave 2 is just 3 months.
- Sample size less as compared to targeted sample for the study (100 samples were targeted, but for analysis purpose only 60 were used).

*To Study the change in Physician's perception about Electronic Health records on its usage over a period of time*

# Acknowledgements

- My deepest gratitude to Mr. Ashish Chaudhary, Dell Services, for giving me an opportunity to do my internship & also do this Dissertation and to learn various aspect of Healthcare IT.
- I am extremely grateful to Dr. Vivek Sahi, Dr. Fahad Mustafa Khan, Dr. Tanika Kaistha , Mr. Ajay Aiyar, Dell Services who guided and helped me during each phase of this study.
- I also thank Dr. Anandi Ramachandran, my Mentor and Dr. Pawan Kumar Taneja for continuous guidance and support throughout my dissertation period.
- I would also like to express my deepest gratitude to Ms. Jyotsna Khatri, my friend for her continuous support and valuable inputs from beginning till the end of my dissertation.
- Last but not least, I would like to thank my Mother and Sister who always encouraged me to follow my dreams and for their love, incredibly great confidence, and unbounded support throughout the course of this journey and beyond.
