The certificate is awarded to

RAKHI WADHWANI

In recognition of having successfully completed her Internship in the department of

F & B DEPARTMENT

And has successfully completed her Project on

STREAMLINING THE RECORDING PROCESS OF FOOD CONSUMPTION FOR F & B DEPARTMENT

AT

SITARAM BHARTIA INSTITUTE OF SCIENCE & RESEARCH, QUTUB INSTITUTIONAL AREA, NEW DELHI

Duration –3rd February to 3rd May, 2014 She comes across as a committed, sincere & diligent person who has a

Strong drive & zeal for learning We wish her all the best for future endeavors!

Mrs. Saru Bhartia

Senior Manager [Administration & Quality]

Sitaram Bhartia Institute of Science & Research, Qutub Institutional Area, New Delhi

iv

TO WHOMSOEVER MAY CONCERN

This is to certify that Rakhi Wadhwani is a student of Post Graduate Diploma in Hospital and Health Management (PGDHM) from International Institute of Health Management Research, New Delhi has done dissertation at Sitaram Bhartia Institute of Science & Research, Qutub Institutional area, New Delhi from February 3, 2014 to May3, 2014.

The Candidate has successfully carried out the study designated to him during internship training and his approach to the study has been sincere, scientific and analytical. The Internship is in fulfillment of the course requirements. I wish her all success in all his future endeavors.

Dr. A. k. Agarwal

Dean, Academics and Student Affairs

IIHMR, New Delhi

Ms. Anupama Sharma

Assistant Professor

IIHMR, New Delhi

CERTIFICATE OF APPROVAL

The following dissertation titled "STREAMLINING THE RECORDING PROCESS OF FOOD CONSUMPTION FOR F & B DEPARTMENT" at "Sitaram Bhartia Institute of Science & Research, Qutub Institutional area, New Delhi" is hereby approved as a certified study in management carried out and presented in a manner satisfactorily to warrant its acceptance as a prerequisite for the award of Post Graduate Diploma in Health and Hospital Management for which it has been submitted. It is understood that by this approval the undersigned do not necessarily endorse or approve any statement made, opinion expressed or conclusion drawn therein but approve the dissertation only for the purpose it is submitted.

Dissertation Examination Committee for evaluation of dissertation.

CERTIFICATE FROM DISSERTATION ADVISORY COMMITTEE

This is to certify that Ms. Rakhi Wadhwani a graduate student of the Post- Graduate

Diploma in Health and Hospital Management has worked under our guidance and supervision. She is submitting this dissertation titled "STREAMLINING THE RECORDING PROCESS OF FOOD CONSUMPTION FOR F & B

DEPARTMENT" at "Sitaram Bhartia Institute of Science & Research, Qutub Institutional area, New Delhi" in partial fulfillment of the requirements for the award of the Post- Graduate Diploma in Health and Hospital Management. This dissertation has the requisite standard and to the best of our knowledge no part of it has been reproduced from any other dissertation, monograph, report or book.

EXECUTIVE SUMMARY

- ➤ Introduction: A food & beverages service involves preparation of food and allotment of service personnel to provide quality service with a goal of complete customer satisfaction. The scope of the department is to provide properly framed balanced diet to patients, hospital staff, visitor's cafeteria under safe and hygiene conditions. So for effective and efficient management of F &B department it is utmost necessary to get the base line data of food consumption of the hospital.
- Dbjectives: A food & beverages service department works in close conjunction with the department of Dietetics & Nutrition for proper & timely execution of patient diet orders. Providing food which is prepared hygienically under the umbrella of good manufacturing practices in consideration with the client need and keeping in mind his goal and serving it in a warm ambience is the prime objective of hospital food & beverages department. The purpose of the study was to get informative and detailed picture of the Food and Beverage department, collecting baseline data and to systemize the process of food consumptionin Sitaram Bhartia Institute of Science&Research.
- ➤ Methods: Data regarding the food consumption was collected through the New Formats designed to get the food consumption data in 4 main categories i.e. IN-PATIENTS, STAFF CAFETERIA, COFFEE SHOP AND OFFICIAL EVENTS. PDSA for the respective category was ran to test the feasibility of the sheets deployed for getting the credible baseline data of food consumption. Also to know whether there is further need of improvisation or not! So as to get the total food consumption of the hospital.

- ➤ Results: Through this project the baseline data was successfully collected with the help and support of staff. It was found that on an average 18 19 Bed Tea, 21 Breakfast, 19 Mid-Morning Meal, 22 Lunches, 17 Evening snacks, 21Dinner are served. In staff cafeteria maximum food consumption is at Lunch time as compared to breakfast & dinner time. An average of Rs. 4873 is monetary value of per day food consumption. In coffee shop chocolate pastry, Idli, Vada & Breadpakora are consumed in higher quantities than other items. In month of April 2014 total 14 Official Events happened out of which 10 were in house and 5 were sponsored.
- Conclusion: Hospital food & beverages services play an important role in patient recovery and well-being. Food service quality can also influence patients' satisfaction with their overall hospital experience. Access to a safe and healthy variety of food is a fundamental human right. This project is very helpful for streamlining the F & B department by getting the appropriate baseline data of food consumption in Sitaram Bhartia Institute of Research Sciences. The inventory levels and other aspects of the F & B department can be managed later on with the help of this baseline data. This will result in efficient as well as effective F & B department management. In systemizing the process of recording food consumption it was realized that that further improvisation is need i.e. use of DIET MANAGEMENT SOFTWARE. This software enables the staff to record the consumption in HIS which ultimately help staff to work efficiently & also to management for important decision making as this will make the process mistake proof.

ACKNOWLEDGEMENTS

This study is an accomplishment due to the timely help, guidance and consent support of several people. The investigator owes a deep sense of gratitude towards all those who have contributes to successful completion of this endeavor.

I am grateful to Mr. Abhishek Bhartia, Director and Mrs. Saru Bhartia, Senior Manager - Quality and Administration, Sitaram Bhartia Institute of Science & Research, Qutub Institutional area, New Delhi for allowing to do the dissertation in this hospital under their able guidance, direction and encouragement.

I offer my gratitude and respect to MS. Megha Dhingra, Senior Executive – Quality & Training, for constant support guidance and encouragement as Mentor who guided at every step of this project.

I also offer my gratitude and respect to all the staff members of Quality Department and F & B Department for their constant support and guidance.

My sincere thanks to all the staff members of Sitaram Bhartia Institute of Research Sciences for their kind cooperation in providing the needed information and help for the study.

I am also grateful to Dr. Ashok K. Agarwal, Dean, IIHMR, New Delhi, for giving us an opportunity to take up this study at Sitaram Bhartia Institute of Research Sciences and for his constant guidance and encouragement.

I my gratitude and respect to Ms. Anupama, Associate Professor, IIHMR, New Delhi, for his constant guidance and support in completion of this study.

PART 1 – INTERNSHIP REPORT

ORGANIZATION PROFILE

Sitaram Bhartia Institute of Science and Research is a paradigm – a human institution put together, being constantly improved and honed into maturity by a team of professionals committed to excellence in health care. From its roots in epidemiological research, today Sitaram Bhartia functions as a multi-specialty hospital and research center.

Core Purpose

To serve society as a well-spring of excellence in healthcare delivery, research and education.

Core Values

- Putting the interest of the patient first
- Treating others as you would want to be treated yourself
- Continuous learning and improvement
- Institution building

Envisioned Future

We will be a prolific medical center that will be known for its commitment to practicing evidence-based medicine and providing world-class care. We will have well established research programs that will focus on gaining a better understanding of the health care needs in our communities and developing practical solutions for addressing those needs. We will be seen as pioneers who will have successfully taken up those health care challenges that may otherwise have remained poorly addressed. We will have

collaborative arrangements with leading institutions from around the world and be in the forefront of providing training to health professionals. Donor agencies and individual philanthropists will recognize our work by generously supporting our initiatives. We will be widely acknowledged as an institution that serves as a symbol of excellence in our society. ^[1]

DIRECTOR'S MESSAGE

Sitaram Bhartia Institute of Science and Research was founded with a spirit of serving society through research. With our focus on health we have evolved into an organization that combines medical research with excellence in patient care. Our research focuses on collecting health-related information, translating evidence-based guidelines in clinical practice, developing cost-effective interventions for improving care, investigating factors influencing disease development, and analyzing medical literature for developing clinical guidelines.

Our medical care services strive to deliver care as per internationally accepted evidence-based guidelines. This often translates to a structured approach in which teams of health care professionals work together to comprehensively address needs of patients and their families. Outcomes measurement is also increasingly used to continuously monitor and improve the quality of our care. In all our activities we maintain a commitment to integrity that has often led our patients to comment that we provide care that they can trust. We hope that your experience with us will be similar and look forward to associating with you.

-Abhishek Bhartia

QUALITY DEPARTMENT

The internship was carried out at QUALITY DEPARTMENT of Sitaram Bhartia Hospital, Qutub Institutional Area, New Delhi. The Department is headed by Mrs. Saru Bhartia, Senior Manager Administration & Quality. Quality at Sitaram Bhartia Institute of Science and Research is an effort to provide patient-centered care. Sitaram Bhartia is inclined towards improving processes to ensure ease of workflow for staff. The department aims at increasing the level of transparency so that our patients can make informed healthcare decisions. Sitaram Bhartia follows improvement principles of Institute of Healthcare Improvement, Cambridge, USA. The methodologies adapted by Sitaram Bhartia are as follows-

#	Type of tool	#	Name of tool
A	Root cause analysis	1	Ishikawa diagram
		2	5Ws diagram
В	Project charter	1	Define aim statement
		2	Identify measures and change ideas
С	Idea generation	1	Brainstorming
		2	Snorkel session
		3	Driver diagram
		4	Tree diagram
D	PDSA cycles	1	Data collection
		2	Develop a change
		3	Test a change
		4	Implement a change

Е	Lean tools	1	5-S methodology
		2	Value stream mapping
		3	Time observation study
		4	Spaghetti diagram using standard work sheet
F	Analysis of outcomes	1	Control charts
		2	Run charts
		3	Pareto diagram
G	Project management	1	Gantt chart
	methodology and tools	2	Questionnaire development

Function of the department are-

- 1. Identification of current process and subsequent improvement
- 2. Identification of outcomes and processes
- 3. Identification and implementation of change ideas for improvement
- 4. Creating Standard operating procedures for increasing efficiency in workflow
- 5. Providing training for continuous quality improvement
- 6. Conducting regular process and documentation audits
- 7. Taking patient feedback and involving operational department for improvement
- 8. Analyzing data and developing best practices
- 9. Monthly review meeting with department heads to discuss the monthly performance.

KEY LEARNINGS ~

- ➤ In the Induction period I learned about various **quality tools** like PDSA, RCA, and Tree Diagram etc. **Charts learned** are Pareto, Chart, C Chart, S Bar, X Bar chart etc
- Software learned ~
- Microsoft Visio, Gant Chart, Various functions in Microsoft Xcel and chart runner etc.
- ❖ I also learned how to make **project charter** which includes detailed & systemized report of the project done.
- Along with my project on streamlining the F & B Department workflow I was also involved in the running project on NPS NET PROMOTER SCORE. In this the quality team visit the patients and take the feedback [personally with the help of score card having ratings from zero to five where zero is very bad experience and five represents excellent experience. Based on the score received for the hospital clinical as well as supportive services we probe for suggestions for improvement in which we come to know about various improvement areas which was forwarded through official report mail to Senior Management and HODs of respective department. How they came to know about the Sitaram Bhartia Institute If Research Sciences is also asked. The feedback taken is then comprised as daily report and sent to senior management and updated on website of the patients who has given the consent for the same.]
- ❖ Today's healthcare environment has sprung up as costlier, demanding and competitive.

 With every passing time, the organization is trying to develop strategies and its goals how to beat its competitors and be the number one in the market. So the quality department is working hard to improve the hospital functioning to manage if effectively as well as efficiently.

PART – II ~ DISSERTATION REPORT

INTRODUCTION

Effective hospital management is the crux of success in the ever changing and dynamic world of today. Today world is realizing the importance of F & B management in hospitals. It is an established fact that the patient outcome is a result of efficient and appropriate management of medical, nursing and allied care along with provision of good hygienic food, clean linen, safe environment, congenial atmosphere and good interpersonal relationship.

India is the developing country and even the health industry in India is growing rapidly. To be in the competition with the international hospitals Indian hospitals must have increased its standards in all the major areas. Out of these F &B has turned out to be a recognized support service which not only ensures prevention and containment of hospital infection but also contributes to widen the image of the hospital in the eyes of public. Profit is the result of solid planning, sound management and careful decision making. It has never been tougher to build and sustain a successful food and beverage business than it is today. Food and beverage department face an array of increasingly complex issues and questions—and the manner in which they choose to respond will shape the future of the department for many years to come.

A food & beverages service involves preparation of food and allotment of service personnel to provide quality service with a goal of complete customer satisfaction. The scope of the department is to provide properly framed balanced diet to patients, hospital staff, visitor's cafeteria under safe and hygiene conditions. This

department works in close conjunction with the department of Dietetics & Nutrition for proper & timely execution of patient diet orders. Providing food which is prepared hygienically under the umbrella of good manufacturing practices in consideration with the client need and keeping in mind his goal and serving it in a warm ambience is the prime objective of hospital food & beverages department.^[7]

Streamlining the F & B department is must for that we need the food consumption data through this project which can ultimately be linked to the inventory management in future as it is necessary to be the cost effective. To collect the base line data for management of F & B department it is necessary to know the total food consumption of the hospital. The data related to F & B department use to be collected but not in a systematic way. So designing of proper format and system is needed so as to get the appropriate baseline data. New Formats are designed to get the food consumption data in 4 main categories i.e. IN-PATIENTS, STAFF CAFETERIA, COFFEE SHOP AND OFFICIAL EVENTS. New excel sheets are made to get the data in respective categories.

AIM & OBJECTIVE

AIM OF THE STUDY ~

➤ To systemizing the process of recording food consumption for F & B department of Sitaram Bhartia Institute of Research Science.

SPECIFIC OBJECTIVE ~

- To design a system for recording the food consumption in F & B department of Sitaram Bhartia Institute of Research Science.
- ➤ To systemize the process of recording of food consumption in F & B department of Sitaram Bhartia Institute of Research Science.
- > To collect the data for daily food consumption in IPD, through the tracker sheet named "IPD Daily Consumption sheet".
- To collect the data for extra orders given by in-patients (with meal or as random orders), through the tracker sheet named "IPD Extra order Food Consumption sheet" (apart from 8 served meals).
- > To collect the data for food consumption in Staff Cafeteria, through the tracker sheet named "Staff Cafeteria Food Consumption sheet".
- > To collect the data of food consumption in Official Events, through the tracker sheet named "Official Events Food Consumption Sheet".
- ➤ To collect the data for food consumption in coffee shop, through the tracker sheet

 Coffee Shop Food Consumption Sheet.

RATIONALE

F & B department is important to manage as it is directly linked to the level of patient satisfaction. Baseline data is must to manage the department. In Sitaram Bhartia Institute of Research Sciences the food consumption data was recorded but not in systemize format. So there was no baseline data. Streamlining the F & B department is must for that we need the food consumption data through this project which can ultimately be linked to the inventory management in future as it is necessary for being cost effective. To collect the base line data for management of F& B department it is necessary to know the total food consumption of the hospital.

This project is very helpful for streamlining the F & B department by getting the appropriate baseline data of food consumption in Sitaram Bhartia Institute of Research Sciences. The inventory levels can be managed. To be a profit making organization it is utmost necessary to manage the inventory effective as well as efficiently. This can only be managed if we know the total food consumption of the hospital. Food is supplied into 5 main categories i.e. to IN-PATIENTS, STAFF CAFETERIA, COFFEE SHOP, CME/PARY AND OFFICIAL ORDERS. To get the appropriate data of all these 5 categorize systematic formats in excel are prepared and responsibility to fill these are assigned to particular personnel. Once we get the baseline data of total food consumption in the hospital we can improvise in many ways for making F & B Management effective as well as efficient. This data can also be useful for inventory management. Thus it is very necessary to collect credible food consumption data.

LITERATURE REVIEW

- A) The study on "Future Skills Requirementsof the Food and BeverageSector" was done by Expert Group ON Future Skill Need in November 2009 to review current and future skills demand and supply for the food and beverage sector and to identify the current and future key drivers of change. The methodology for this report included three main phases, namely: Phase 1 Secondary Research and identification of Drivers-of-change; Phase2 Primary Research and Consultations; and Phase 3 Conclusions, Recommendations and Reporting. The result of the study was that six key drivers-of-change in the sector were identified i.e. consumer trends; health andwellness; sustainability and ethical concerns; policy; consolidation of retailers; and technology.Companies need to become more aware of what is currently being provided by the third levelinstitutions and development agencies and to engage with, and participate in, these courses, initiatives and programs.^[3]
- B) The study titled "Hospital foodservice directors identify the important aspects when implementing room service in hospital foodservice" was conducted by Zafirah Mohd at Nor Iowa State University Ames, Iowa in 2010. A mixed methods design was used which included an in-depth interview with a key informant (an expert) was conducted to collect detailed and rich data about room service implementation. The findings propose the need for a deeper understanding of the room service concept to assist foodservice directors in their decision-making process. Aspects which appear to have great impact on patient satisfaction, such as better meal delivery service and meal quality, must be emphasized and studied. Availability of hospitable employees and a variety of menu

choices that meet patients' preferences are crucial components needed for room service. As hospitals consider expanded services, the potential for cost saving and quality control possible in a room service systemmay sufficiently offset capital investment costs and this also will be expected to benefitDNRS to introduce room service that fit the operational characteristics of a particular hospital. [4]

- C) Morten Freil, Michael Allerup Nielsen, Camilla Biltz, Rikke Gut, Bent Egberg Mikkelsen and Thomas Almdal conducted a study on **Reorganization of a hospital catering system increases food intake in patients with inadequate intake in 2006** with the objective To study whether a reorganization of a hospital catering system enabling patients to choose their evening meal individually, in combination with an increase in the energy density of the food, increases the energy and protein intake of the patients. A conclusion of the study was Reorganization of a hospital catering system can increase energy and protein intake and reduce waste substantially.^[5]
- D) Eur J Clin Nutr. 1998 Dec conducted study on Validation of a self-administered form for recording food intake in hospital patients at Rikshospitalet, Oslowith the objective of Validation a self-administered form used by patients to record their food intake and compare the recorded data with the observed intake. Conclusion of the study was that for most patients, the self-administered form adapted to the hospital menu appears to have acceptable validity, but for some patients it was unacceptable, mainly owing to food items being omitted and not because of incorrect estimate of amounts of food. [6]

METHODOLOGY

- Study Area:
- > Sitaram Bhartia Institute of Research Sciences, Qutub Institutional area, New Delhi
- Study Duration:
- ➤ Three months ~ 3rd February 3rd May 2014
- Study Design:
- Descriptive Cross Sectional study
- Study Population:
- ➤ Total food consumed in 4 categories i.e. I.P.D., Official Events, Staff Cafeteria and Coffee Shop.
- ➤ All the data of 1 month i.e. ~ from 1st April to 30thApril 2014 is collected.
- Data Collection Tool& Techniques:
- Primary data were collected by the Food Consumption Sheet for I.P.D., Official Events, Staff Cafeteria and Coffee Shop. Secondary data were collected from the various journals, manual of food and beverages manual of thee hospital and websites.

PROCESS & ANALYSIS

Streamlining the F & B department is must for that we need the food consumption data through this project which can ultimately be linked to the inventory management in future as it is necessary to be the cost effective. To collect the base line data for management of F & B department it is necessary to know the total food consumption of the hospital. Food is supplied into 5 main categories i.e. to **IN-PATIENTS, STAFF CAFETERIA, COFFEE SHOP and OFFICIAL EVENTS.**So for getting the appropriate data of all these 4 categorize systematic formats in excel are prepared and responsibility to fill these are assigned to particular personnel. Following were the steps taken-

1) **For I.P.D**–

A. The Dietician wasassigned to fill the I.P.D. – Food Consumption Sheet shift wise daily (i.e. morning and evening shift). The total diets served for the eight meals were recorded in the I.P.D. Food Consumption Sheet. The eight meals served were – Bed Tea, BREAKFAST, Mid Morning Meal, Lunch, Evening tea & Snacks, Soup, Dinner, Bed time Milk. To get the I.P.D consumption data new excel sheet was designed i.e. '1.P.D. – Food Consumption Sheet'. So a PDSA- I.P.D Food Consumption Ramp1 Cycle1 was run "To test the credibility of the 'Food Consumption Data' of I.P.D. by evaluating the process of recording the data." (ANNEXURE – 1~ A - I)

* ANALYSIS -

• This sheet was analyzed and it was found that –

- Total 8 meals use to be served in I.P.D. per day (categorized into bed tea, breakfast, mid morning meal, lunch, evening snacks, soup, dinner, bed time).
- Further bifurcation of every meal into normal, soft, diabetic and liquid diet).
- This provides us with an overview of meals consumed in a day, related to occupancy.
- Extra orders were not taken into account while recording the number of diets served to the patients.
- B. So next cycle conducted wasPDSA for Random Orders Ramp1 Cycle2"To test the credibility of the 'IPD Extra order Food Consumption sheet' by evaluating the process of recording the data."The Dietician was assigned the responsibility of filling the I.P.D. Extra Order Food Consumption Sheet on daily basis with the help of DIET SLIPS made by her while taking rounds (two times a day) and MIS for random orders. (ANNEXURE –1~ J & K)

ANALYSIS -

- ➤ With the 'IPD Extra order Food Consumption sheet' extra orders placed by the patients apart from the eight meals served were tracked successfully.
- The highest random orders placed were of coconut water, tea and fruits.
- 2) For Staff Cafeteria The F & B Manager was assigned with the responsibility of filling the Staff Cafeteria Food Consumption Sheet on the basis of coupons collected by the Service Department Supervisor of the sale of food. There are two coupons used for the meal in staff cafeteria i.e. yellow and Pink. Yellow coupon is used to get any one thing out of complete meal e.g. either chapattis or vegetable etc and Pink coupon for complete meal. At 3pm daily the service supervisor count the total coupons collected category wise (i.e. yellow and pink) and this record is reported to F & B

manager. On basis of this record the F & B manager fills the Staff Cafeteria – Food Consumption Sheet daily.(ANNEXURE – 2~A & B)

ANALYSIS -

- The food consumption record at staff cafeteria was recorded through Staff Cafeteria –
 Food Consumption Sheet.
- ➤ Generally maximum coupons are collected at lunch time.
- > Yellow coupons are collected in more number than pink coupon.
- ➤ Food is also served to 8 Doctor as complimentary meal.
- Food is also served as compensatory meal to the staff members doing extra duty.
- There is a need of an improvised process for collection of coupons to make it mistake proof, so as to get the more appropriate data.
- 3) **For Coffee Shop -** Coffee Shop sales record is maintained through MIS. So the Food Consumption data is maintained through **Software Coffee Shop.** The PDSA was ran 'to test the credibility of the data obtained through the software and rule out whether there is any need of improvisation in this or not'. (ANNEXURE -3 A & B)

ANALYSIS -

The software maintains the records of daily issued, daily sales and items left out.

- The expiry date of the items is also there in the software which prevents sale of expired material.
- The amount of food wasted is also recorded in the software like how much each item is wasted on daily basis e.g. 5 Idlis, 4 Samosa etc.
- ➤ The Food consumption data at coffee shop is maintained properly with the help of Coffee Shop Software which needs no further improvisation.
- 4) For Official Events The F & B Manager was assigned with the responsibility of filling the "Official Events Food Consumption Sheet" with the help of "Function Prospectus" and "Official Entertainment" Slip prepared by Event Coordinator as per the event. This consist of date of the event, No. of PAX, Menu served, name of the organizer and whether it is in-house or sponsored. (ANNEXURE 4 A& B)

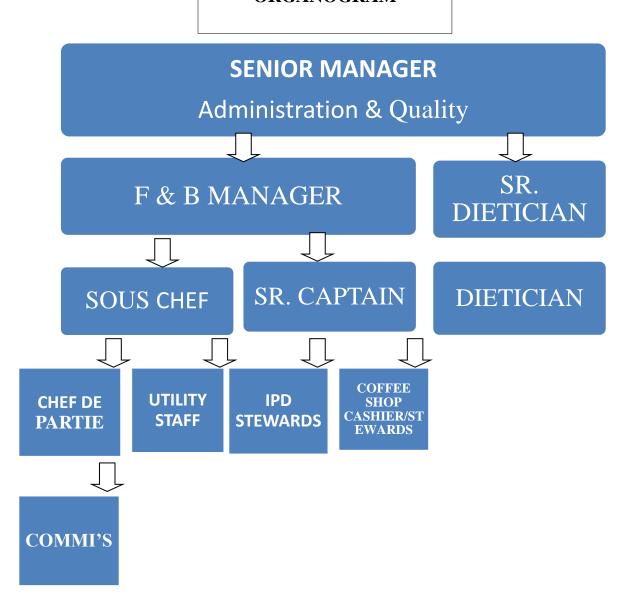

ANALYSIS –

- ➤ The 'Official Events Food Consumption Sheet' provided the records of food consumption at CME, Workshops, Farewell and Meetings.
- The data of food consumption was recorded successfully with through 'Official Events
 Food Consumption Sheet'.

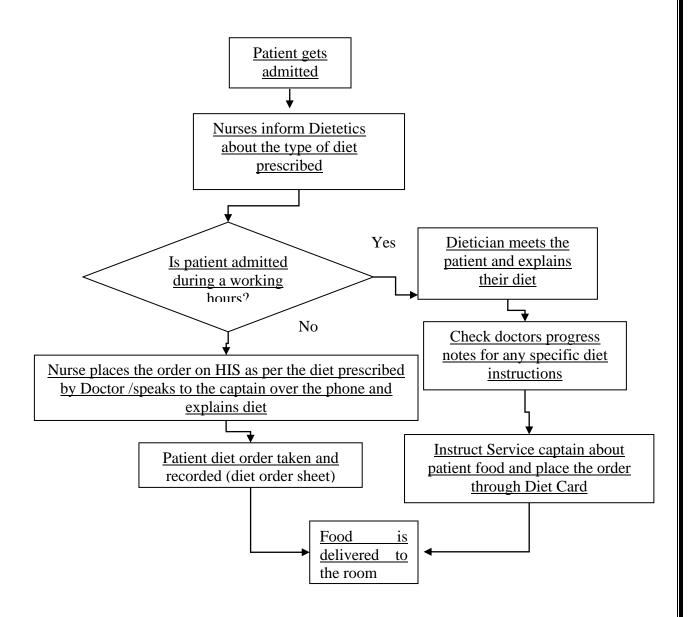

STUDY FINDINGS

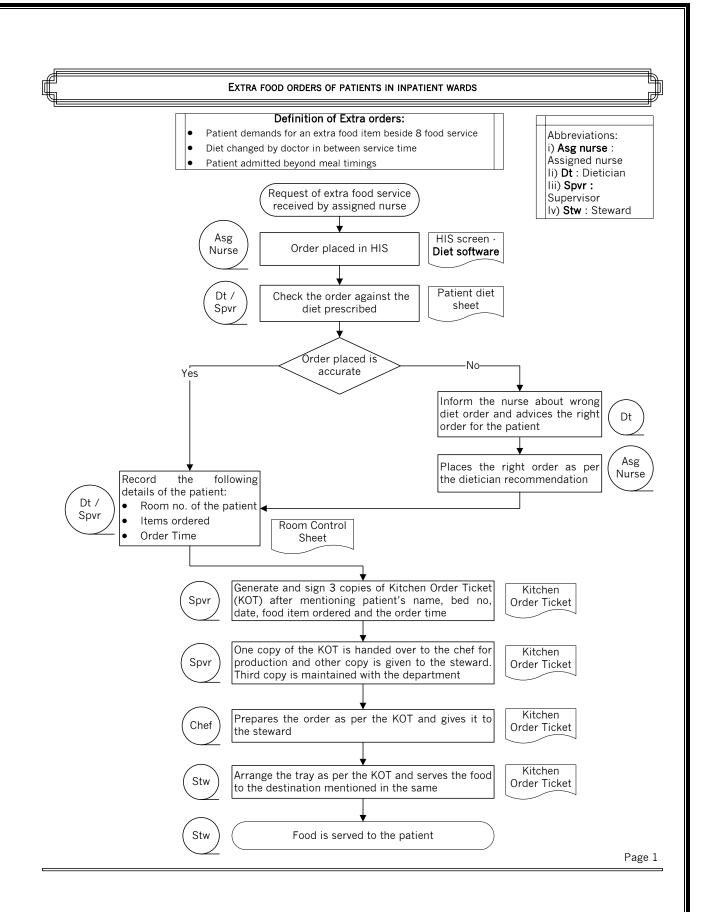

OVERVIEW OF FOOD SERVICE DEPARTMENT IN SITARAM BHARTIA INSTITUTE OF RESEARCH SCIENCES

ORGANOGRAM

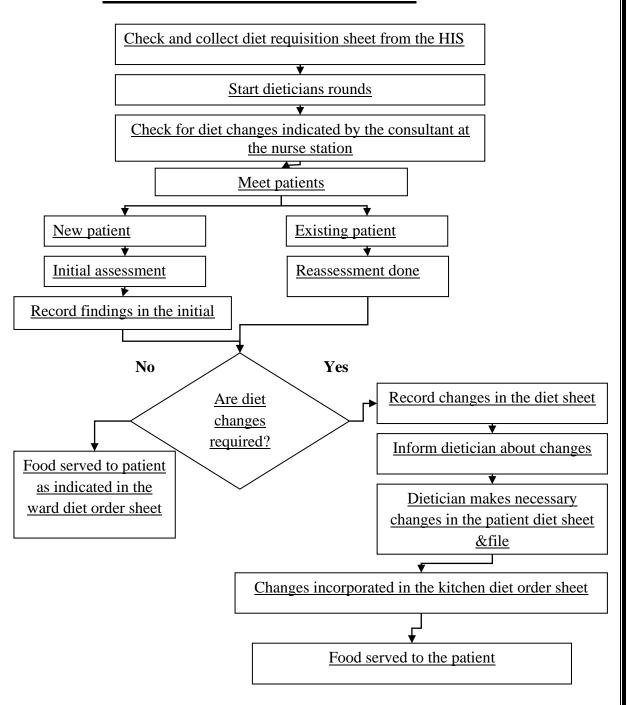

WORK FLOW PROCESS OF FOOD & BEVERAGE DEPARTMENT AT SITARAM BHARTIA INSTITUTE OF RESEARCH SCIENCES

DIET SERVICE OVERVIEW

TYPES OF DIET SERVICE:

- ❖ There are two types of inpatient diet service:
- 1. Liquid Diet Service
- Solid Diet service
- 3. Soft Diet Services

1. Liquid Diet Service:

- a. Is provided to the patients who are unable to take solids following a surgery, in labour or according to the patient's clinical condition.
- b. Patients are served liquids 2nd hourly. There are 9 feeds given throughout the day starting 6am to 10pm unless specified otherwise. Liquid service can be a clear liquid or full liquid.
- c. A liquid diet service chart is maintained in the feed section which consists of the patient's name, room number, type of liquid at that particular time and any special needs (diabetic, renal, RT feed etc).
- d. The steward / captain ensure that the liquid diets are served second hourly or as specified in the case of tube feeds.
- e. Liquid Diet Service Timings:
- ❖ 6 am, 8 am, 10 am, 12 noon, 2 pm, 4 pm, 6 pm, 8 pm, and 10 pm

2. Solid Diet Service

- a. Is provided for the patients who can consume solids. These are again based on patients' clinical and physiological conditions.
- b. Solid Diet Service is as per Patient fixed meal timings:

3. Soft Diet Services -

- a. Is provided to the patients who are unable to take solids according to their physiological and medical condition.
- b. Soft diet is served to the patients on the fixed meal timings.
- c. It is also provided to the patient who can eat normal diet but still wish to consume the soft diet.

Menu Planning (Function of Dietetics)

- d. Seasonal menus are planned. These are made to accommodate seasonal vegetable changes. In addition weekly menus are planned for staff and visitors so that vegetable and ration procurement is predetermined. Cyclic menus are planned in advance to accommodate various nutritional requirements of patients and is given to the cooks in advance.
- ❖ 8 Meals will be served to patients throughout day. The timings will be as follows-
- ➤ Bed Tea 0600 hrs -0630hrs
- ➤ Breakfast 0730 hrs –0830hrs
- ➤ Mid-day Drink 1030 hrs 1130 hrs
- ➤ Lunch 1230 hrs 1400 hrs
- ➤ Tea with Snacks 1600 hrs 1630 hrs
- ➤ Evening Soup 1800 hrs 1900 hrs
- ➤ Dinner 1930 hrs –2100hrs
- ➤ After Dinner 2100 hrs 2130 hrs

*** PATIENTS A-LA-CARTE ORDERS**

➤ The patient may order in addition to the 8 meals provided. No charge for the same is being levied on patient at present. The order is supposed to come via the dietician or can be placed directly with the Order taker in absence of the dietician which shall be approved eventually.

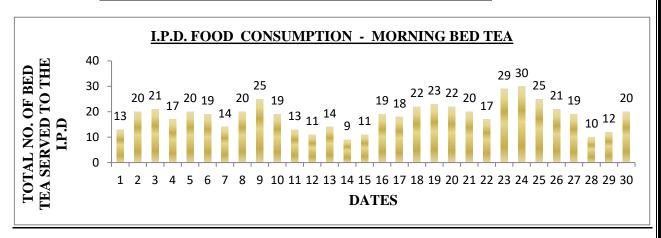

❖ PHC SERVICE / DIABETES PROGRAM

➤ Healthy and nutritious breakfast is served for the person who comes for the Executive Health Checkup.

RESULTS OBTAINED THROUGH NEW DESIGNED SHEETS ARE AS FOLLOWS –

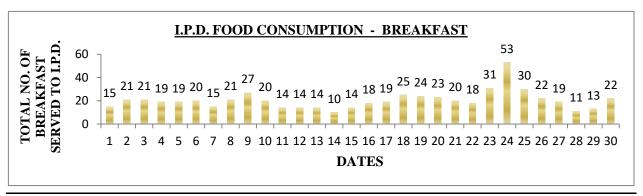

1 - I.P.D. Food ConsumptionResults-

Chart – 1 - I.P.D. Food Consumption during Morning Bed Tea

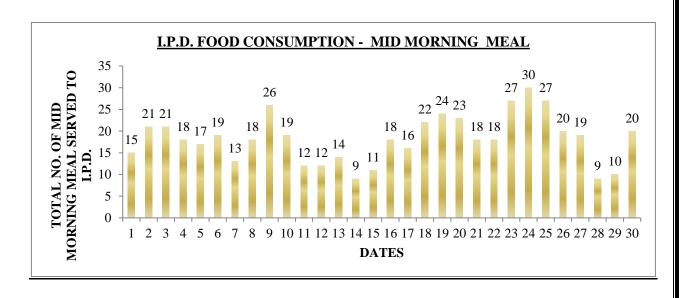

<u>ANALYSIS</u> – On an average 18 - 19 Bed Tea were served to the I.P.D. in the month of April 2014.

<u>Chart - 2 - I.P.D. Food Consumption during Breakfast</u>

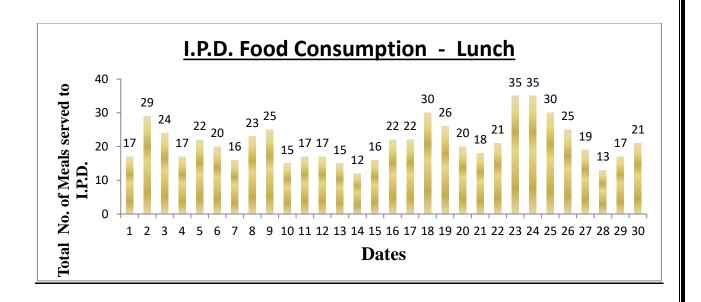

<u>ANALYSIS</u> – On average 20 – 21 Breakfast were consumed in I.P.D in the month of April 2014.

CHART - 3 - I.P.D. Food Consumption served to I.P.D. During Mid Morning

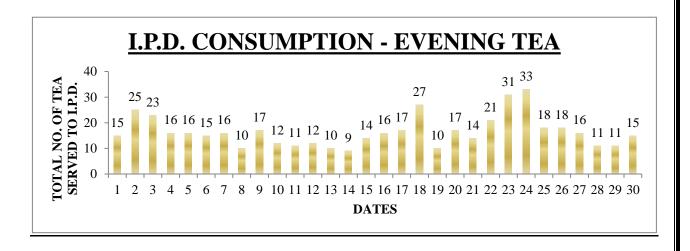

<u>ANALYSIS</u> – On an average 18 – 19 Mid Morning Meal were served to the I.P.D. in the month of April 2014.

Chart – 4- I.P.D. Food Consumption served to I.P.D. During Lunch

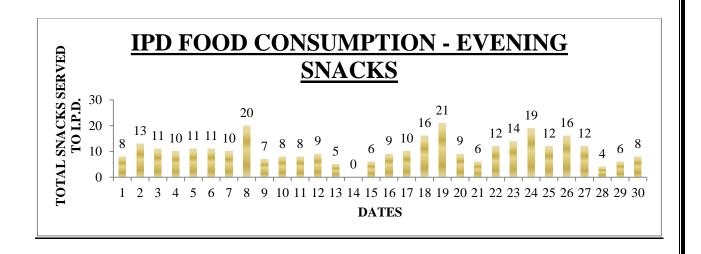

<u>ANALYSIS</u> – On an average 21 -22 Lunches were served to the I.P.D. in the month of April 2014

<u>Chart – 5 I.P.D. Food Consumption served to I.P.D. During Evening Tea</u>

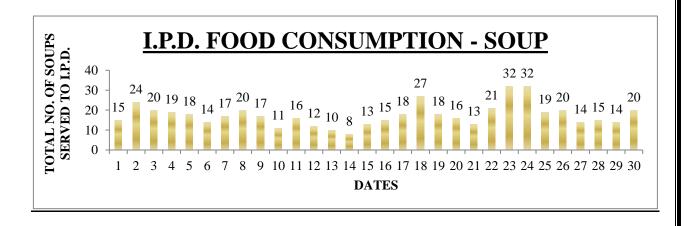

<u>ANALYSIS</u> – On an average 16 – 17 Evening Tea were served to the I.P.D. in the month of April 2014.

Chart – 6 I.P.D. Food Consumption served to I.P.D. During Evening Snacks

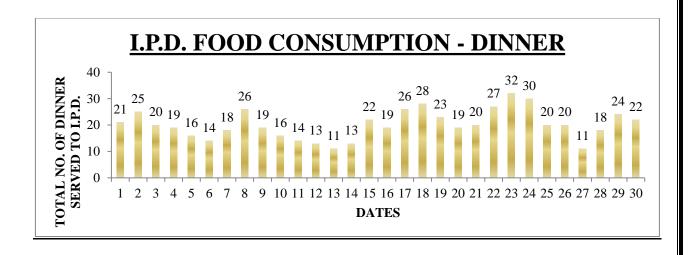

<u>ANALYSIS</u> — On an average 10 -11 Snacks were served to the I.P.D. in the month of April 2014.

Chart – 7 I.P.D. Food Consumption of Soup served to I.P.D. in evening

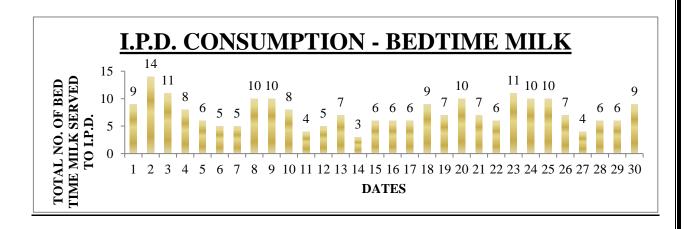

ANALYSIS – On an average 17-18 Soups were served to the I.P.D. in the month of April 2014.

Chart - 8 I.P.D. Food Consumption served to I.P.D. During Dinner

<u>ANALYSIS</u> — On an average 20-21 Dinner were served to the I.P.D. in the month of April 2014.

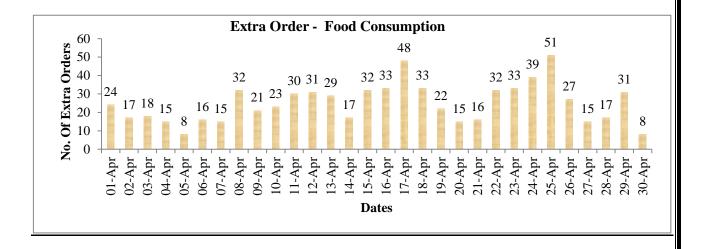

Chart – 9 I.P.D. Food Consumption served to I.P.D. During Bed Time

<u>ANALYSIS</u> – On an average 7-8 Bed Time Milk were served to the I.P.D. in the month of April 2014

<u>CHART – 10 ~ I.P.D. EXTRA ORDER FOOD CONSUMPTION -</u>

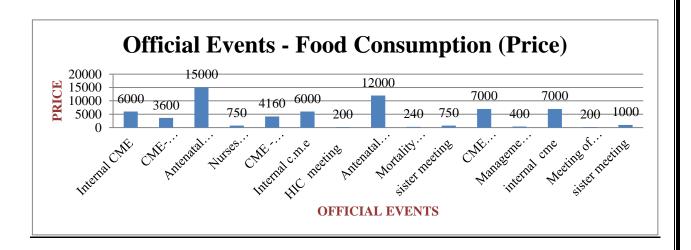

The data of extra order places by the in-patients are recorded. The Extra Oder list has total 65 items out which the orders are placed. The data is recorded by the Dietician. (Annexure - 3) Result found is –

<u>ANALYSIS</u> – 24 – 25 extra orders are consumed per day on an average in month of April 2014.

2- OFFICIAL EVENTS FOOD CONSUMPTION RESULTS~

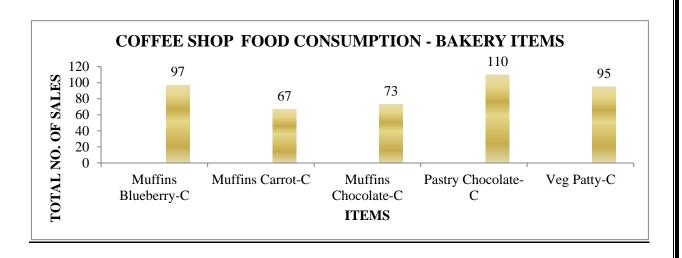

<u>CHART – 11 Official Events~ Food Consumption</u>

<u>ANALYSIS</u> – Official event food consumption includes the consumption occurred in C.M.E, Farewell, Workshops and Official events/meetings. Total 15 official events were there in month of Aril 2014 out which 10 were IN- House and 5 were sponsored.

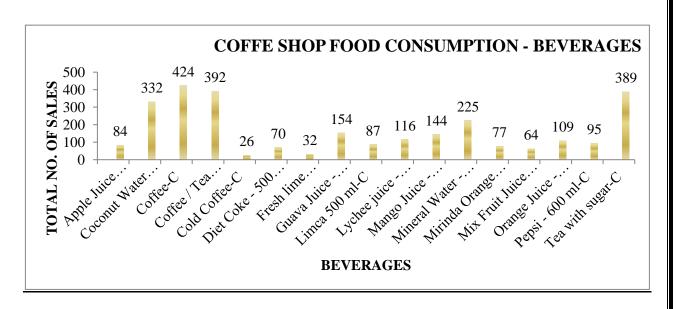

3- COFFEE SHOP FOOD CONSUMPTION RESULTS ~

<u>CHART – 12 – Coffee Shop Food Consumption of Bakery Items</u>

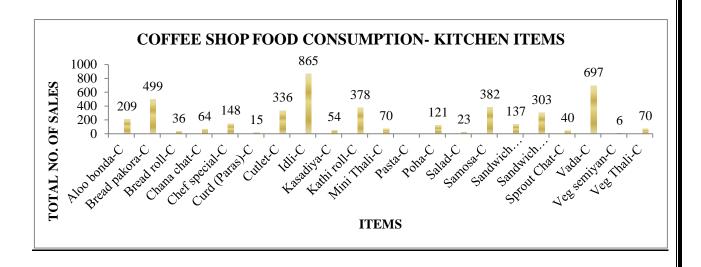

<u>ANALYSIS</u> – Chocolate pastries were consumed highest amongst all bakery items.

Chart – 13 - Coffee Shop Food Consumption of Beverages

<u>ANALYSIS</u> – Tea, Coffee were consumed maximum in the month of April. Coconut water was consumed in higher amounts out of total beverages at coffee shop.

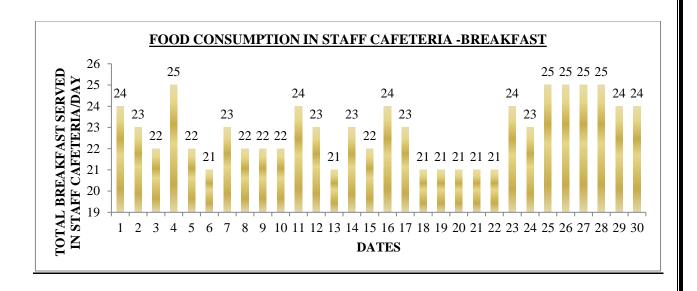

<u>Chart – 14 - Coffee Shop Food Consumption of Kitchen Produced Items</u>

ANALYSIS- Idli, Vada and breadpakora were consumed maximum in coffee shop.

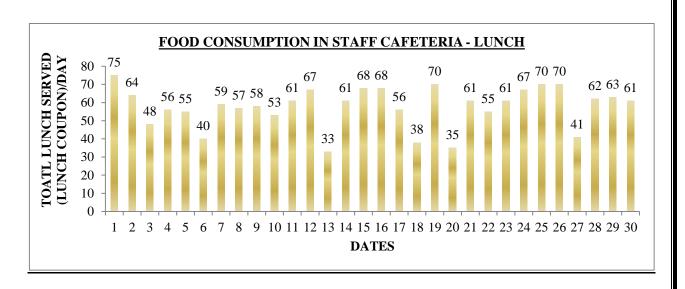

4- STAFF CAFETERIA FOOD CONSUMPTION RESULT~

Chart - 14 - Food Consumption in Staff Cafeteria - BREAKFAST

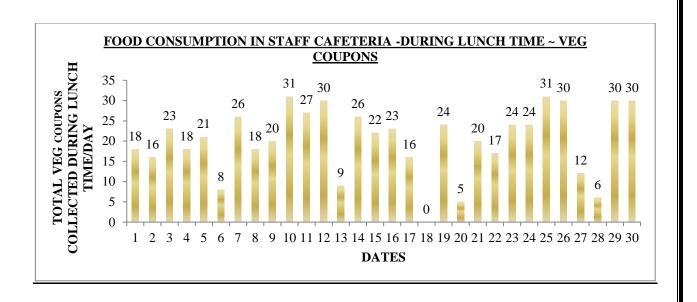

ANALYSIS - 22-23 breakfasts were consumed on average in month of April 2014.

<u>Chart – 15 – Food Consumption in Staff Cafeteria - LUNCH</u>

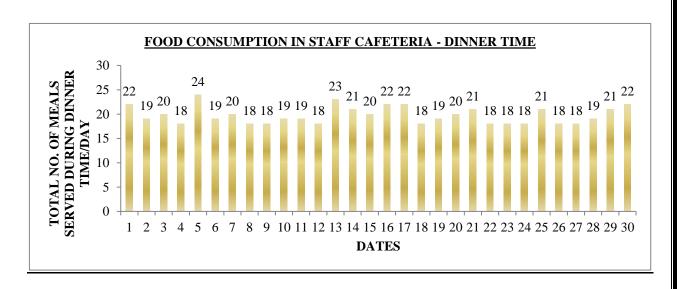

<u>ANALYSIS</u> – 57-58 lunches were consumed on average in month of April 2014.

<u>Chart – 16 – Food Consumption in Staff Cafeteria – LUNCH ~ VEG COUPONS</u>

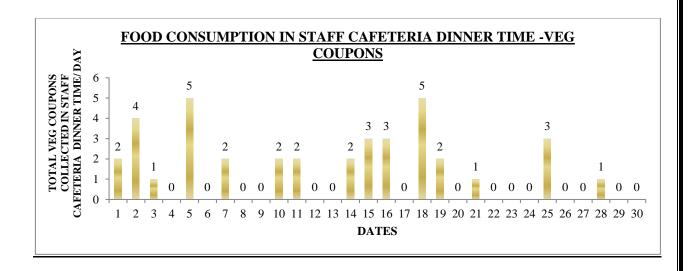

ANALYSIS- 20-21 breakfasts were consumed on average in month of April 2014.

<u>Chart – 17 – Food Consumption in Staff Cafeteria – DINNER</u>

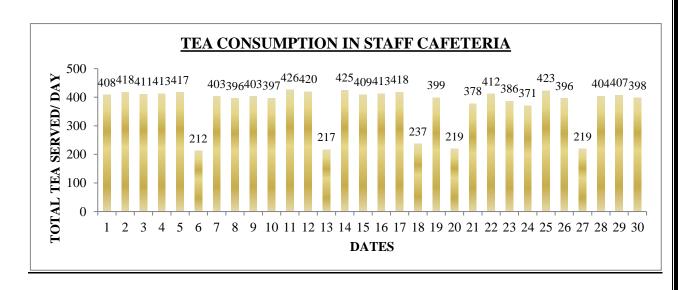

ANALYSIS-19-20 dinner meals were consumed on average in month of April 2014.

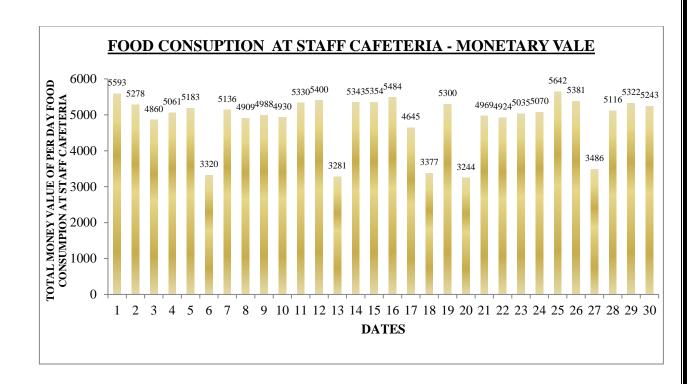

<u>ANALYSIS-</u>2-3veg coupons are received during dinner time in staff cafeteria on average in month of April 2014.

Chart - 19 - Food Consumption in Staff Cafeteria - TEA

ANALYSIS-375 Cups of Tea were consumed on average in month of April 2014.

<u>Chart – 20 – Food Consumption in Staff Cafeteria – TOTAL MONETARY VALUE PER</u>

ANALYSIS-Rs. 4873 was the monetary value of per day consumption at staff cafeteria on average in month of April 2014.

RECOMMENDATIONS

❖ **DIET MANAGEMENT SOFTWARE** -Diet Software is needed which should be linked to the MIS so as to maintain the Food consumption records more systematically.

❖ Functioning through Diet Management Software-

- ➤ The Dietician will plan diet of each and every patient in the system instead of making several diet sheets manually at the time of taking the round of IN − PATIENT DEPARTMENT.
- Forecasting of the food consumption for the meals to be served in next 12hrs is done by the dietician in the system which will help the food production team for doing preparations. The actual meal will be prepared according to the forecasting as well as the current occupancy of beds. (to avoid the wastage due to sudden discharges or admissions)
- ➤ Diet software will also prove mistake proofing mechanism as nobody can enter food which will be against the patient condition e.g. juice will not be registered in the system for the patient who is diabetic.
- No food item will be served to the patient unless and until it is mentioned in software and approved by the dietician till 7pm. After that the Staff nurse will enter the random order in the system according to the patients need but for random orders a sage list of items are prepared which can be given to patients which will too be mistake proofed according to the restrictions based on patients medical condition.
- ➤ The Diet Management software also record the food consumption in staff cafeteria, official events and this can be linked to the coffee shop software in later stages.

- ➤ On the basis of the diet planned in the diet management software the consumption records can be taken out easily which will set the basis for inventory procurement hence the inventory can be easily managed.
- This will also be used to know the previous diet records of the patients.
- Accounts management of the F & B department will become easier to get whether we are making profits or going in losses. Thus enabling the F & B department to be cost effective.

ADVANTAGES OF DIETARY MANAGEMENT SOFTWARE -

T heimplementation of software will result in following benefits –

- ➤ Data entered through system will disseminate the data to all the authorized personnel of the hospital to see and take decisions accordingly.
- The systemized data entered in MIS is also useful for management in decision making.
- ➤ Data managed through this software will be helpful for dietician as it's much convenient to make diet slips in software and plan diet for the patients accordingly as compared to manually recording each and everything.
- ➤ The records obtained from the DIET management software will give us the difference between the actual consumption and needed.
- The records obtained through DMS will be appropriate which can be used to standardize all the process in F & B Department.
- Automation of the process production summary etc will be generated which will help the production department in preparing food etc.
- Process of Diet planning for the patient will be improvised.

- Mistaking proofing will also be there in diet planning of the patient e.g. nobody can give mango juice to diabetic patients.
- ➤ Dietician and Doctors can also see the patient's diet records to manage his diet.
- This will also support the service department to provide food in to the patients.
- ➤ Procurement of the inventory will also get regularized.
- ➤ Inventory will be effectively well as efficiently being managed.
- This will also lead to cost reduction of price incurred in printing many diet slip notepad for different categories of patients i.e. normal and diabetic.
- It will also help to track the waste of food items and the raw materials.
- ➤ Pilferage may also get reduces (if there).

OTHER RECOMMENDATIONS ~

- > Menu should be revised as some patients ask for different cuisines of food.
- > Diet slips should be made through software instead of making them manually.
- > Drop down list should be made of the item which is served as extra orders as per the patients demand (apart from the eight meals served) instead of manually typing and entering the item in system which leads to spelling errors etc.
- ➤ No order should be served to the patient without the dietician consent to avoid the reactions due to the diet.
- ➤ Production of the food should be according to the production summary received through the MIS to avoid the short fall or waste of food.
- More improvisation is needed for the collection of staff coupons and maintaining the records of same.

DISCUSSION

This study was based on understanding the F & B department and designing the new formats to record the credible data of food consumption in the SITARAM BHARTIA INSTITUTE OF RESEARCH SCIENCE. To streamline the F & B department it is utmost necessary to get the baseline data. So the appropriate baseline data of food consumption is necessary to maintain the department. This data can be used further to manage the inventory, process etc in the F & B DEPARTMENT. This all will result in efficiently as well as effective management of the F & B department.Other studies mentioned in ROL done on different topics in the F & B department but ultimately the aim of all these are to improve the F & B department management for the betterment of the hospital. Like study conducted on "Future Skills Requirements of the Food and Beverage Sector" done by Expert Group ON Future Skill Need found that there are six key drivers-of-change in the sector were identified i.e. consumer trends; health and wellness; sustainability and ethical concerns; policy; consolidation of retailers; and technology. "Hospital foodservice directors identify the important aspects when implementing room service in hospital foodservice" was conducted by Zafirah Mohd at Nor Iowa State University Ames, Iowa found that the hospitals consider expanded services as the potential for cost saving and quality control possible in a room service system may sufficiently offset capital investment costs and this also will be expected to benefit DNRS to introduce room service that fit the operational characteristics of a particular hospital etc. Thus all these studies conclude that better management of F& B department is necessary for the development of the hospital for which the baseline data is necessary. Like this study

CONCLUSION

The baseline data in the Sitaram Bhartia Hospital was maintained manually that too not systematically. By designing we get the appropriate food consumption data of the hospital. While doing this it was discovered if the hospital move step ahead by working on DMS than this will add stars to the F & B department management. The comparison between the manual system of maintaining records and through DMS is mentioned below ~

	MANNUAL - SYSTEM	DMS - SYSTEM						
	The dietician plans the records two	The dietician will plan the diet in the DMS						
	times in a day, making records in	clicking on the options present in the system						
1	the Diet Slips manual and KOT's	which contains all the options related to type of						
	were used to record the food to be	diet to be served, restrictions, patients special						
	prepared apart from the day menu.	orders etc.						
	According to the Diet Slips and	Based on the data fed in system by dietician the						
2	KOT's prepared by the dietician the	kitchen production department will obtain the						
	chef prepare the food.	production summary on basis of which they						
		prepare food also by cross checking with the latest						
		changes due to admissions and discharged through						
		the software.						
	The food prepared on the manual	The print of computerized diet tickets will be						
3	records is served to the rooms by	generated for each specified room no. according to						
	the service department of the	which the food will be served to respective rooms.						

	kitchen tagging those manually	
	made diet slips.	
	This process needs several note	This will cut down the cost of printing diet
	pads for planning the diet as well as	planning notepads as diet tickets will be obtained
4	place to store the records of past 3-4	through system which needs the bar code printer
	years.	though it's a onetime investment but it will save
		space and money in lo0ng run. Also the place will
		become free which was used to store those note
		pads.
	The records of food consumption in	The records of total food consumption of the
5	above mentioned 4 categories are	hospital will easily be generated through this
	use to be recorded manually.	software. Also many other records can easily be
		generated through this.
	The raw materials were procured on	The raw material will be procured on the basis of
6	basis of chef's assumption for the	actual consumption pattern of the hospital based
	requirement and not on actual	on the actual food served. LEADING TO
	consumption need.	BETTER INVENTORY MANGEMENT.
	The records obtained from the	The data entered in the DMS cannot be distorted,
7	manual system can be changed or	changed or misinterpreted.
	misinterpreted etc can lead to	
	several errors.	
	The system leads to food wastage	Wastage records can also be seen through the
8	which was not recorded.	system and also the root cause of the wastage can
		be traced much easily.

	Pilferage (if any) cannot be ruled	Pilferage (if any) of the raw material etc can easily
9	out through manual entry system.	be ruled out.
	These records are usefully but not	These records are appropriate and credible for
10	as credible as obtained through	management for decision making.
	DMS for management to take any	
	important decisions.	
	Error can happen while serving	Mistake Proofing is set in this system as for
11	food to patient which any specific	specific medical condition particular food items
	medical condition though this	will not get entered in the system, So no errors
	system.	will happen with allergic and restricted diet
		patients.

Note~ It's always necessary to get the baseline data to further improving the department. So the new formats were designed to get the consumption I.P.D, STAFF CAFETERIA, COFFEE SHOP AND OFFICIAL EVENTS. The data was obtained with the help and support of the staff. By designing the new format for getting the appropriate food consumption it was realized that it can be further improvised by using DMS. So the work is in progress in the hospital to work on DMS. By using DMS both the management and the staff will get benefitted. Hence the DMS should be implemented so that F & B department can effectively as well efficiently manage. Thus this process of collecting the baseline data of food consumption was helpful in taking the F & B department to a better level.

 Patient Satisfaction in Asian Heart Institute and Research Centre Mumbai in April 8
 June 7, 2013.

<u>ANNEXURE – I (A)</u>

Learning and Improvement Cycle – PDSA Form

Team: Mrs. Saru Bhartia (Senior Manager – Quality & Administration)

Mrs. Ruchika Jain (Dietician)

Mrs. Monika (Dietician) **Date:** March 20th, 2014

Dr. Megha Dhingra (PT)

Dr. Rakhi Wadhwani (PT)

Name of test: To test the credibility of the 'Food Consumption Data' of I.P.D. by

evaluating the process of recording the data.

Cycle #: Ramp 1 cycle 1

The objective of this cycle is to: $\sqrt{\text{Collect Data }}$ Develop a change

☐ Test a change ☐ Implement a change

PLAN

What is the objective for this cycle?

The objective is to collect the data for daily food consumption in IPD, through the tracker sheet named "IPD Daily Consumption sheet".

Note – **A** new "IPD Daily Consumption sheet" is introduced which consist of a comprehensive list of all the categories of diets served for I.P.D, to be filled on daily basis, by Dietician (as per the shift).

1. The data is compiled into the above sheet as per the diet slips made by dietician and orders from new admission/change due to discharge; respectively for daily consumption.

What questions do you want to answer with this PDSA cycle?

- 1. Whether the "IPD Daily Consumption sheet" will provide appropriate data of consumption?
- 2. Will assigning a person (Dietician) for filling of this sheet provide the required data for consumption?
- 3. What will be overall impact of "IPD Daily Consumption sheet" and maintaining the same, on the process and staff?

Predictions (for questions above based on plan):

- 1. Consumption data was maintained at multiple sources with no one authorized personnel. Defining the comprehensive sheet will establish a reliable source of data.
- 2. Assigning the responsibility to a particular person will hold that person accountable for the same.
- 3. (I) Initially, recording of daily consumption in the sheet might be missed due to certain operational reasons (unfolded as the PDSA will be carried).
 - (II)There might be some discrepancies between the data recorded by dietician and the corresponding data maintained by the kitchen staff.

List of tasks required to set-up this test: Who, What, When, Where?

What Data?	Who	When	Where
	Collect?	collect?	collect?
Meeting Dietician to discuss the	Sr.	20 th March	Dietician's
plan.	Executive-	2014	Office,
	Quality		Basement
2. Explaining the Dietician, to act as	Sr.	20 th March	Dietician's
per the plan and fill the "IPD Daily	Executive-	2014	Office,
Consumption sheet"	Quality		Basement

Plan to collect data to answer your questions: Who, What, When, Where?

	Data?	Who	When	Where	How to
		Collect?	collect?	collect?	collect?
	Recording of following	Sr.		From	Tracker
	activities:	Executive-	21 th March	Dietician	sheet - IPD
	"IPD Daily Consumption	Quality	2014		Daily
	sheet" by the Dietician,				Consumption
	which includes detail of				sheet
	eight meals served to I.P.D.				
	Person filling the sheet				
	(Shift-wise)				
	2. Observing the process	Sr.	21 th March	N.A.	N.A.
	and data used to maintain	Executive-	2014		
	the above sheet.	Quality			
L					

3. Collection of "IPD	Sr.	21 th March	From	Tracker
Daily Consumption	Executive-	2014	Dietician	sheet
sheet " from Dietician	Quality			

DO

What did you observe when the test was carried out?

- 1. On 20th March 2014 dietician didn't prepare the "IPD Daily Consumption sheet" as was planned since she asked for 1day time to understand & start working on with this format.
- 2. Initially there was difference in the actual number of total diets given to in-patients because the liquid diet [though recorded in sheet] was not considered to get the total number of diets served to the in patients. [But after the discussion the dietician started including liquid diets to get the total diets served meal wise.]
- 3. Extra orders were not taken into account while recording the number of diets served to the patients.
- 4. Dietician felt some difficulty in recording the exact number of diets served meal wise because of frequent change in number of patients [as patients are being admitted and discharged simultaneously] Were there any unexpected observations?

Dietician faced difficulty in recording the exact diets prepared and number of diets actually served because of changes due to admissions and discharges of patients.

STUDY

Analyze your data and describe the results. How do the results compare with your predictions?

The consumption sheet provide with following details (Refer to Annexure-1):

- C. Total no. of meals served in I.P.D. in a day (categorized into bed tea, breakfast, mid morning meal, lunch, evening snacks, soup, dinner, bed time).
- D. Further bifurcation of every meal into normal, soft, diabetic and liquid diet).
- E. This provides us with an overview of meals consumed in a day, related to occupancy.

What did you learn from this cycle?

• Identifying & Assigning responsibility to single person helps to get appropriate & complete data.

	ACT
	Are you ready to implement? (Feel confident in change, have tested under different conditions
	and have no more questions)
	□yes √□ no
	Plan for the next cycle (Have more questions, need to make adjustments).
>	Tracking of extra orders and incorporating the same in "IPD Daily Consumption sheet".
>	Tweaking the sheet for getting the deviation from forecast to actual meal served (because of the new
	admission/discharges).

Describe the objective for your next cycle:

> The objective is to collect the data for daily food consumption in IPD, through the tracker sheet named "IPD Daily Consumption sheet" including the extra orders given by patients (apart from 8 served meals).

ANNEXURE - 1 (J)

Learning and Improvement Cycle – PDSA Form

Team: Mrs. Saru Bhartia (Senior Manager – Quality & Administration	
Mrs. Ruchika Jain (Dietician)	Date: March 29 th ,2014
Dr. Megha Dhingra (PT)	
Dr. Rakhi Wadhwani (PT)	
Name of test: To test the credibility of the "IPD - Extra order Food Continuous the process of recording the data. Cycle #: Ramp 1 cycle 2 The objective of this cycle is to: √ Collect Data □ Develop a □ Test a change □ Implement □	Act Plan Study Do

PLAN

What is the objective for this cycle?

To collect the data for extra orders given by in-patients (with meal or as random orders), through the tracker sheet named "IPD - Extra order Food Consumption sheet" (apart from 8 served meals).

Note -

- > A new "IPD Extra order Food Consumption sheet" is introduced which consist of a comprehensive list of the items served as extra orders to in-patients as per demand (with meal & random orders) to be filled on daily basis, by Dietician.
- ➤ The data for extra orders is compiled into the above sheet as per the diet slips made by dietician to be served along with meal and orders from HIS.

What questions do you want to answer with this PDSA cycle?

- ➤ Whether the "IPD Extra order Food Consumption sheet"will provide appropriate data of consumption?
- ➤ Will assigning a person (Dietician) for filling of this sheet provide the required data for consumption?
- ➤ What will be overall impact of "IPD Extra order Food Consumption sheet" and maintaining the same, on the process and staff?

Predictions (for questions above based on plan):

- This comprehensive sheet might be "one stop" source for extra orders given by the patients, since random orders are entered by nurses and others are noted in diet slips prepared by dietician.
- Assigning the responsibility to a particular person will hold that person accountable for the same.
- > Recording of some extra order consumption in the "IPD Extra order Food Consumption sheet" might be missed initially due to certain operational issues.

List of tasks required to set-up this test: Who, What, When, Where?

Who Collect?	When collect?	Where collect?
Sr. Executive-	27 th March 2014	Dietician's
Quality		Office, Basement
Sr. Executive-	27 th March 2014	Dietician's
Quality		Office, Basement
	Sr. Executive- Quality Sr. Executive-	Sr. Executive- Quality 27 th March 2014 Sr. Executive- 27 th March 2014

Plan to collect data to answer your questions: Who, What, When, Where?

Data?	Who Collect?	When collect?	Where collect?	How to collect?
i) Collection of "IPD - Extra order Food Consumption sheet" from dietician. ii) Recording the no. of extra orders from the above sheet. iii) Randomly matching the same with the diet slips made by dietician.	Sr. Executive- Quality	29 th March 2014	From Dietician	Tracker sheet - "IPD - Extra order Food Consumption sheet"
. Observing the process and data used to maintain the above sheet.	Sr. Executive- Quality	29 th March 2014	N.A.	N.A.

DO

What did you observe when the test was carried out?

- Initially there was an issue with the list of items to be recorded as extra orders, aftermath the list was tweaked with additions and deletions of some items as per the observation of dietician.
- Now a consolidate list of items is prepared and used to record the extra orders on daily basis.
- ➤ The data for 29th March 2014 was not received on the planned day (i.e. on 30th MARCH 2014), since it was Sunday. It was received on 31st March 2014 as on Sundays Dietician (was not on duty). Therefore collective data of 29th & 30th March 2014 was received on 31st March 2014 (Monday). After

that the data is being received daily.

- Extra orders are manually entered in the system by the nurses, this leads to many spelling errors leading to difficulty in understanding.
- Fruits & soup served with meal to some patients as per their demand were not mentioned as extra orders in the records.

Were there any unexpected observations?

Only one order was with meal and rests were random orders. Later when cross checked from the diet slips it was observed that fruits, soup etc. served with meal was not recorded as extra order in "IPD - Extra order Food Consumption sheet" by the dietician.

STUDY

Analyze your data and describe the results. How do the results compare with your predictions?

- ➤ The "IPD Extra order Food Consumption sheet" provide with following details (Refer to Annexure-1):
- ➤ Only one extra order was made with Breakfast and no extra order was made with any other meal.
- Total 26 random orders were made in a day on 29th March 2014.
- ➤ The highest extra orders placed were of coconut water, tea and fruits.

What did you learn from this cycle?

Designing proper format and assigning the responsibility to one person for recording the data gives us the appropriate data.

ACT

Are you ready to implement? (Feel confident in change, have tested under different conditions and have no more questions)

 \square yes \sqrt{no}

Plan for the next cycle (Have more questions, need to make adjustments).

communicate with the EDP for making the drop down list of all the items served as extra orders to the inients in order to have comprehensive data from HIS.

include fruits & soup served along with meal in extra order sheet.

Describe the objective for your next cycle:

To test the feasibility of entering the extra orders in the system by the nurses through drop down list (containing all the items served as extra orders) to get the appropriate data of extra orders.

ANNEXURE 1 (K)

ANNEXURE 2 (A) - FOOD CONSUMPTION IN STAFF CAFETERIA

Learning and Improvement Cycle – PDSA Form

Team: Mrs. Saru Bhartia (Senior Manager – Quality & Administration)

Mr. Praveen Kumar (F & B Manager)

Dr. Megha Dhingra (PT)

Dr. Rakhi Wadhwani (PT)

Date: April 1st , 2014

Name of test: To test the credibility of the 'Food Consumption Data' of Staff Cafeteria by evaluating the process of recording the data.

Cycle #: Ramp 1 cycle 1

The objective of this cycle is to: $\sqrt{\text{Collect Data}}$ Develop a change

☐ Test a change ☐ Implement a change

PLAN

What is the objective for this cycle?

The objective is to collect the data for daily food consumption in IPD, through the tracker sheet named "Staff Cafeteria - Daily Food Consumption sheet".

Note -

- A new "Staff Cafeteria Daily Food Consumption sheet" is introduced which is to be filled by the F & B Manager on daily basis recording the data of total meal served in the staff cafeteria in 4 main category i.e. Breakfast, Lunch, Dinner and Tea.
- The data is compiled into the above sheet as per the total number of coupons received (both lunch & veg. coupon) by service supervisor in the kitchen and complimentary meal served to the eight (fixed) doctors, the staff who is doing extra duty & kitchen staff.

What questions do you want to answer with this PDSA cycle?

- > Whether the "Staff Cafeteria Daily Food Consumption sheet" will provide appropriate data of consumption?
- > Will assigning a person (F & B Manager) for filling of this sheet provide the required data for consumption?
- ➤ What will be overall impact of "Staff Cafeteria Daily Food Consumption sheet" and maintaining the same, on the process and staff?

Predictions (for questions above based on plan):

- > Consumption data was maintained by the kitchen staff which doesn't include all necessary components, with no one authorized personnel. Defining the comprehensive sheet will establish a reliable source of data.
- Assigning the responsibility to a particular person will hold that person accountable for the same.
- ➤ (I) initially, recording of daily consumption in the sheet might be missed due to certain operational reasons (unfolded as the PDSA will be carried).
- ➤ (II)There might be some discrepancies between the total number of coupons recorded by F & B manager and actual meals served.

List of tasks required to set-up this test: Who, What, When, Where?

Who	When	Where
Collect?	collect?	collect?
Sr.	29 th	F & B
Executive-	March	Manager's
Quality	2014	Office,

		Floor
	Sr. Executive- Quality Sr. Executive-	Collect? Sr. 29 th Executive- Quality 2014 Sr. 29 th Sr. 29 th March March March March

Plan to collect data to answer your questions: Who, What, When, Where?

Data?	Who	When	Where	How to
	Collect?	collect?	collect?	collect?
1. Recording of following activities: "Staff Cafeteria - Daily Food Consumption sheet" filled by the F & B Manager, which includes detail of total lunch & veg coupons received, total tea served and complimentary meals served to eight doctors & F - B Staff.	Sr. Executive- Quality	1 st April 2014	From F & B Manager	Tracker sheet - "Staff Cafeteria - Daily Food Consumption sheet"
2. Observing the process and data used to maintain the above sheet.	Sr. Executive- Quality	1 st April 2014	N.A.	N.A.
3.Collection of ""Staff Cafeteria - Daily Food Consumption sheet" from F & B Manager	Sr. Executive- Quality	1 st April 2014	From F & B Manager	Tracker sheet

DO

What did you observe when the test was carried out?

- ➤ The Staff Cafeteria Food Consumption Sheet is filled by F & B Manager on the basis of the records given him by the Service Team Supervisor.
- > The Sheet gives food consumption data as per the total lunch & veg coupons collected meal wise (i.e. breakfast,

lunch and dinner).

- The sheet also contained the records of total complimentary meals served to eight doctors, staff doing extra duty and the kitchen staff.
- Total tea served is also recorded in three categories i.e. total tea served on basis of coupon, complimentary and total teal served to the doctors.

Were there any unexpected observations?

There were no records kept of pending coupons. These will be received later but the food has been served. Staff requests the F & B staff to give food but they will submit the coupon later as they didn't have it at that time.

STUDY

Analyze your data and describe the results. How do the results compare with your predictions?

The consumption sheet provide with following details (Refer to Annexure-1):

- > 312 teas are served in full day.
- > During lunch time maximum meal is served as compared from breakfast or dinner.
- There is no mistake proofing step involved in keeping the records of total coupons received and the actual meal served.
- Eight complimentary meals are served in breakfast and dinner but not I lunch.

What did you learn from this cycle?

- Identifying & Assigning responsibility to single person helps to get appropriate & complete data.
- Standardizing the process is must to make it mistake proof.

ACT

Are you ready to implement? (Feel confident in change, have tested under different conditions and have no more questions)

□yes √no

Plan for the next cycle (Have more questions, need to make adjustments).

- > Designing a mistake proofing step for getting the actual data of total coupons received and actual meals served.
- > Tracking the number of pending coupons.

Describe the objective for your next cycle:

The objective is to collect the credible data of total coupons received through the tracker sheet named "IPD Daily Consumption sheet" including the pending coupons to know the actual meals served hence getting the records of actual food consumption in staff cafeteria.

ANNEXURE- 3 (A) FOOD CONSUMPTION AT COFFEE SHOP

Learning and Improvement Cycle - PDSA Form

Team: Mrs. Saru Bhartia (Senior Manager – Quality & Administration)

Mr. Praveen Kumar (F & B Manager)

Mr. Viranda (Coffee Shop In charge)

Dr. Megha Dhingra (PT) Dr. Rakhi Wadhwani (PT)

Name of test: To test the credibility of the 'Food Consumption Data' of Coffee Shop by evaluating the process of recording the data through MIS.

Cycle #: Ramp 1 cycle 1

The objective of this cycle is to: $\sqrt{\text{Collect Data}}$ Develop a change

☐ Test a change ☐ Implement a change

Date: April 1st, 2014

PLAN

What is the objective for this cycle?

The objective is to collect the data for daily food consumption in Coffee Shop, through the software namely Coffee Shop Software -

Note -

- A Coffee Shop Software is used which consist of a comprehensive list of all the sales report of the items sold in Coffee shop. The data is entered in the software by the coffee shop in charge (as per the shift).
- The data is entered in the system as per the sale of the items. The date of making and accordingly expiry date of the item is also there in the software.
- ➤ Daily opening and the closing stock records are also maintained through the software. There is separate login id in the software for each in-charge (shift wise) to record the sales in the software.

What questions do you want to answer with this PDSA cycle?

- > Whether the "Coffee Shop Daily Consumption sheet" will provide appropriate data of consumption?
- ➤ Is there any need of further improvisation in the software and the process?
- ➤ Is the staff properly recording the sales & wastage and reporting the same to the F & B department?

Predictions (for questions above based on plan):

- Consumption data maintained in the coffee shop software might be a reliable source of data.
- > There might be need of planning the process for deciding the quantity of each food item to be prepared for the consumption of the day (according to the consumption pattern) to avoid the wastage.
- Recording of daily consumption in the software might be missed due to certain operational reasons (unfolded as the PDSA will be carried) and assigning the responsibility to a particular person will hold that person accountable for the same.

List of tasks required to set-up this test: Who, What, When, Where?

	What Data?	Who	When	Where
		Collect?	collect?	collect?
>	Meeting F & B Manager and the	Sr.	31 st	F & B
	coffee shop in-charge to discuss the	Executive-	March	Manager's
	plan.	Quality	2014	Office
>	Explaining the F & B Manager and	Sr.	31 st	F & B
	the coffee shop in-charge, to act as	Executive-	March	Manager's
	per the plan and fill the "Coffee Shop	Quality	2014	Office
	Software daily sales sheet".			

Plan to collect data to answer your questions: Who, What, When, Where?

	Data?	Who Collect?	When collect?	Where collect?	How to collect?
>	Recording of following activities: "Coffee Shop Daily Sales" by the Coffee shop in-charge, through the software which includes detail of all the items issued, sold and left out in the coffee shop. Person filling the sheet (Shift-wise)	Sr. Executive- Quality	1 st April 2014	Coffee Shop In- charge	Coffee shop Daily sales report, from HIS.
	Observing the process of recording the consumption.	Sr. Executive- Quality	1 st April 2014	N.A.	N.A.
A	Collection of "Coffee Shop Daily Consumption sheet" from HIS	Sr. Executive- Quality	1 st April 2014	N.A.	N.A.

DO

What did you observe when the test was carried out?

- ➤ On the 1st April the Coffee shop consumption was recorded in the system by the Coffee Shop IN–Charge shift wise through their respective login Id's.
- > Through software it can be traced out the total no. of each item issued, sold and left back in the coffee shop.
- > It also shows the expiry date of each item so as to make it mistake proof (from selling the expired item).
- The software also shows the sale done by each in-charge shift wise as well as collective data of full day consumption can also be traced.

Were there any unexpected observations?

Every day in morning the food items are issued to the coffee shop. Quantity of each item to be prepared is decided according to the chef's assumptions and on the basis of consumption pattern thus leading to wastage/shortage of

some items.			

Analyze your data and describe the results. How do the results compare with your predictions?

The consumption sheet provide with following details (Refer to Annexure-1):

- > Amongst the beverage tea/coffee, coconut water and apple juice are sold in higher amount than others.
- ➤ Idli, Vada, bread roll and cutlets are sold in higher amount than others.
- Muffin and veg patty are sold maximum amongst bakery items.

What did you learn from this cycle?

- Standardizing the process leads to efficient workflow and appropriate data is also obtained.
- Identifying & Assigning responsibility to single person helps to get appropriate & complete data.

ACT

STUDY

Are you ready to implement? (Feel confident in change, have tested under different conditions and have no more questions)

□yes √□ no

Plan for the next cycle (Have more questions, need to make adjustments).

> Systemizing the process of deciding the quantity of each item to be prepared each morning for the full consumption in coffee shop.

Describe the objective for your next cycle:

> The objective is to collect the data for daily food consumption in IPD, through the Coffee shop software so as to set the consumption pattern according to which quantity of each food items will be prepared daily to avoid wastage or shortage.

<u>ANNEXURE – 4 (A) FOOD CONSUMPTION OF OFFICIAL EVENTS</u>

Learning and Improvement Cycle - PDSA Form

Team: Mrs. Saru Bhartia (Senior Manager – Quality & Administration)	
Mr. Praveen Kumar (F & B Manager)	
Mr. Sunil (Executive) Date: March 27 th ,2014	
Dr. Megha Dhingra (PT)	
Dr. Rakhi Wadhwani (PT)	
Name of test: To test the credibility of the 'Food Consumption Data' of OFFICIAL EVEN	TS by evaluating the
process of recording the data.	
Cycle #: Ramp 2 cycle 1	Act Plan
The objective of this cycle is to: $\sqrt{\text{Collect Data}}$ Develop a change	Study Do
☐Test a change ☐ Implement a change	

PLAN

What is the objective for this cycle?

The objective is to collect the data for food consumption in official events, through the tracker sheet named "Official Event - Food Consumption sheet".

Note -

- A new"Official Event Food Consumption sheet" is introduced which consist of a comprehensive list of all the items served for CME, no. of plates served plus extra (if needed) and type of meal package.
- This data is compiled via 'Function Prospectus' requested through CME Coordinator. These details 'FP' is forwarded to F&B manager who compiles "Official Event Food Consumption sheet"
- ➤ This is to be filledbyOfficial Event coordinator.

What questions do you want to answer with this PDSA cycle?

- Whether the "Official Event Food Consumption sheet" will provide appropriate data of food consumption?
- Will assigning a person Event Coordinator for filling of this sheet provide the required data for consumption?
- What will be overall impact of "Official Event Food Consumption sheet" and maintaining the same, on the process and staff?

Predictions (for questions above based on plan):

Consumption data was maintained at multiple sources with no one authorized personnel. Defining the comprehensive sheet will establish a reliable source of data.

Assigning the responsibility to a particular person will hold that person accountable for the same.

- (I) Initially, recording of particular items served for Official Event in the sheet might be missed due to certain operational reasons (unfolded as the PDSA will be carried).
- (II)There might be some discrepancies between the data recorded by Official Event Coordinator and the corresponding data maintained by the F&B Manager.
- (III) Their might be some variation in no. of people for whom food is prepared and the actual no. of consumers (attendees of Event).

List of tasks required to set-up this test: Who, What, When, Where?

What Data?	Who Collect?	When collect?	Where collect?
Meeting F&B manager &Event Coordinator to	Megha Dhingra	25 th March 2014	F&B manager
discuss the plan.	& Rakhi		office, ground floor
	Wadhwani		
Explaining the F&B manager &Event	Megha Dhingra	25 th March 2014	F&B manager
Coordinator to act as per the plan and fill the	& Rakhi		office, ground floor
"Official Event - Food Consumption sheet".	Wadhwani		

Plan to collect data to answer your questions: Who, What, When, Where?

Data?	Who	When collect?	Where collect?	How to collect?
	Collect?			
Recording of following activities:	Sr.	27 th March 2014	From F&B	Tracker sheet -
"Official Event - Food Consumption	Executive-		manager	"Official Event -
sheet"filled by F&B manager, which	Quality		&Official Event	Food
includes detail of menu served to			Coordinator	Consumption
Official Event, package of meal and				sheet"
no. of people catered				
'FP' sent for the proposed CME or				
not.				
Observing the process and data used	Sr.	27 th March 2014	N.A.	N.A.
to maintain the above sheet.	Executive-			
	Quality			

DO

What did you observe when the test was carried out?

- 'FP' was not made (one day prior to the Official Event) by the Event coordinator
- So the coordinator was asked to make the same and forward it to the F&B manger.
- "Official Event Food Consumption sheet" was forwarded the same day (though the F&B manager was reminded twice about the same).

Were there any unexpected observations?

Menu for the internal event was not known to the coordinator. He got to know about it after asking F&B manager to fill the food & beverage – Menu, part in the 'FP' form.

STUDY

Analyze your data and describe the results. How do the results compare with your predictions?

- The consumption sheet provide with following details (Refer to Annexure-1):
- The total no. of plates served was 35 on 27th March 2014 which was the maximum expected number so there was no discrepancy in no. of plates served and no. of expected attendees.
- ➤ It was an unpaid CME since it was organized in house.
- The meal package was regular (Rs. 200) which included Nimbu Pani, yellow dal tadka, mix veg, rice, parantha and green salad.
- Regular package of in-house CME usually include the meal menu of the day.

The 'FP' sheet provide the following details -

- Minimum no. of plates which will be served to CME and maximum expected.
- ➤ Food & beverage to be served.
- > Date and time of CME.
- ➤ Whether it is sponsored or unsponsored CME.

What did you learn from this cycle?

Identifying & Assigning responsibility to single person helps to get appropriate & complete data.

ACT

Are you ready to implement? (Feel confident in change, have tested under different conditions and have no more questions)

 \sqrt{ves} $\square no$

Plan for the next cycle (Have more questions, need to make adjustments).

To record the attendance of Official Event along with 'FP' to get the appropriate data regarding food consumption of CME.

Describe the objective for your next cycle:

To track the number of attendees in order to link it with the number of plates served.

<u>ANNEXURE – 4 (B) - FUNCTIONS - MEETINGS - CME'S</u>

Date	Function	Organizer	Venue	Menu	Pax	Rate	Amount	Remarks Paid /In- House
